

Weidner Pharmaceutical Maintenance Service Expertise Where Your Plant Needs It Most

WEIDNER®

When you're running a pharmaceutical operation, getting consistent, high-quality products and maximizing your return on investment hinges on some fundamental factors: pristine line integrity, smooth validation and keeping downtime at bay. That's where proactive, expert maintenance really shines.

At Weidner, our service work is tailored to meet these critical demands: precision, fast response and complete traceability. We don't just fix equipment, we partner with you to ensure every component meets the highest standards.

Gasket Changeouts After Passivation and Diaphragm Valve Changeouts

We use calibrated digital tools and meticulously log the precise torque applied to each fastener, along with the exact date and time it was applied, to ensure leak-free seals and optimal system integrity.

Centrifuge Rebuilds

Restore operational efficiency and extend your equipment's lifespan with our centrifuge rebuilds. Our dedicated service

team is OEM-trained by industry leaders, such as Alfa Laval and Andritz, ensuring centrifuges are rebuilt to factory specifications.

Plate Heat Exchangers

We meticulously track plate stack sequence, offer comprehensive dye testing, and provide full, detailed documentation after every job to ensure optimal thermal transfer efficiency and prevent cross-contamination.

Hygienic Valve Service

Our process includes valve removal, inspection, cleaning, seal replacement, lubrication, reinstallation and start-up testing with thorough documentation to reduce contamination risks and improve your equipment's performance.

Why Trust Weidner with Your Production?

Our credibility in the demanding pharmaceutical space is built on a foundation of proven expertise and rigorous standards:

Deep Industry Expertise:

We've been inside validated pharmaceutical plants for years. We don't just service equipment; we understand regulatory standards, ask the right questions and integrate seamlessly with your team.

Partnership You Can Rely On:

We've earned the trust of major pharmaceutical and biotech clients. Their success stories – and trusted references, available upon request – speak volumes about our commitment to reliable, high-quality service.

Simplified Audits, Enhanced Control:

Say goodbye to audit headaches. Our detailed QA/QC logs and full job traceability give you transparent, auditable records, streamlining validation and inspection.

Safe, Compliant and Expert Execution:

Rest easy knowing our field technicians are rigorously OSHA- and ASME-certified. This commitment to safety and compliance ensures meticulous, high-quality service on every project, giving you peace of mind that your staff and product are protected.

Answers to Common Questions About Our Service

Can your techs work in Grade C/D cleanroom environments?

Absolutely. Our technicians are fully trained and equipped for controlled environments, including Grade C/D (ISO 7-8) cleanroom settings.

What contamination controls do you utilize during gasket/diaphragm changes?

We don't take chances. We employ strict contamination control protocols, use specialized tools and adhere to cleanroom best practices to prevent product compromise during sensitive operations.

What documentation do you provide for QA/validation records?

You'll get everything you need: comprehensive documentation, detailed QA/QC logs, timestamped torque values, plate stack sequences (for heat exchangers) and complete job reports – all designed to support your validation and audit requirements.

How quickly can you mobilize for an unplanned outage or validation window?

When time is critical, we're there for you. We pride ourselves on responsive mobilization. Contact us to discuss your needs, and we'll outline our rapid deployment capabilities.

WEIDNER®

About Weidner

Weidner is a trusted partner for expert hygienic valve preventative maintenance and service, helping food & beverage, cosmetics, and life sciences manufacturers run safer, smarter, and more efficiently every day. Founded in 1959 and family-owned, we don't just maintain components – we help facilities achieve operational excellence and safeguard their product and brand integrity.
