Mining Through the Noise

Miners face daily noise from machinery and blasting, loud enough to damage hearing over time. Without protection or monitoring, the risk often goes unnoticed. **The following data points highlight the scale of the issue.**

75%

of miners are **exposed to hazardous noise, more than any other U.S. industry**

1 IN 4

miners already **have a hearing problem**

90%

of miners with hearing loss **have worked in mining for 15+ years**

36%

hearing loss rate in **construction sand & gravel mining**

57%

of gold miners **experience tinnitus** (ringing in the ears)
