

Building Through the Noise

Construction noise isn't just loud, it's dangerous. Too many workers suffer permanent damage without realizing it. The following data points highlight the scale of the issue.

1 IN 4

construction workers report serious hearing issues

1 IN 14

workers experience ringing in their ears (Tinnitus)

3-5X

Workers with hearing issues have a **3-5X higher chance** of a slip and fall in the workplace

55%

of construction workers over 50 **have hearing issues**

50%

of people working near loud machines **do not** use adequate hearing protection

Tuned

Brings a new hearing protection and care standard to the construction industry, tailored for high-risk environments.
