Strategy description

The fund invests exclusively in currencies (Spot FX) and gold (Spot/Futures Gold) using in-house developed algorithms and arbitrage models. The Circle Fund strategy can be divided into two main strategies, namely a mean reversion strategy and a swap arbitrage strategy.

Mean reversion: A mean reversion strategy is an investment strategy based on the assumption that the prices of assets, in our case currency, tend to return to an average value or "mean" over time. This means that if a currency pair trades significantly above or below its average price, it is likely to correct toward that average. This trading strategy has below-average market risk and is applied to approximately 30% of the Circle Fund's invested assets.

Swap arbitrage: Swap arbitrage is a trading strategy that revolves around taking advantage of price differences or dislocations in swap fees between different brokers, both institutional and retail. Swap costs, also known as rollover costs, are costs associated with holding a currency position overnight. These costs can be either positive (to your advantage) or negative (to your disadvantage) and depend on the interest rate differential between the two currencies in a currency pair. The term "swap" refers to the process of exchanging one currency for another, taking into account the interest rate differential. The idea is to take a position with one broker where you receive a positive swap, and at the same time take an opposite position with another broker where you pay less swap. This allows you to generate income from the swap fees without market risk since the position is 100% hedged. This strategy is completely market neutral and is applied to approximately 70% of the Circle Fund's invested assets.

Monthly Performance

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Year	Cumulative
2026	1.72	3.00											4.77	70.94
2025	-0.08	-0.20	3.31	-0.46	3.21	2.41	-0.69	2.49	2.43	1.92	2.19	1.24	19.15	63.15
