

of philosophy, and talk the language of STOICS, PLATONISTS, and PERIPATETICS,* not that of PYRRHONIANS and ACADEMICS. If we distrust human reason, we have now no other principle to lead us into religion. Thus, sceptics in one age, dogmatists in another; whichever system best suits the purpose of these reverend gentlemen,¹ in giving them an ascendant over mankind, they are sure to make it their favourite principle, and established tenet.

It is very natural, said CLEANTHES, for men to embrace those principles, by which they find they can best defend their doctrines; nor need we have any recourse to priestcraft to account for so reasonable an expedient. And surely, nothing can afford a stronger presumption, that any set of principles are true, and ought to be embraced, than to observe, that they tend to the confirmation of true religion, and serve to confound the cavils of atheists, libertines, and freethinkers of all denominations.

PART II

I MUST OWN, CLEANTHES, said DEMA, that nothing can more surprise me, than the light, in which you have, all along, put this argument. By the whole tenor of your discourse, one would imagine that you were maintaining the being of a God, against the cavils of atheists and infidels; and were necessitated to become a champion for that fundamental principle of all religion. But this, I hope, is not by any means a question among us. No man; no man, at least, of common sense, I am persuaded, ever entertained a serious doubt with regard to a truth so certain and self-evident. The question is not concerning the *being* but the *nature* of God. This, I affirm, from the infirmities of human understanding, to be altogether incomprehensible and unknown to us. The essence of that supreme mind, his attributes, the manner of his existence, the very nature of his duration; these and every particular, which regards so divine a Being, are mysterious to men. Finite, weak, and blind creatures, we ought to humble ourselves in his august presence, and, conscious of our frailties, adore in silence his infinite perfections, which eye hath not seen, ear hath not heard, neither hath it entered into the heart of man to conceive them.* They are covered in a deep cloud from human curiosity: It is profaneness to attempt penetrating through these sacred obscurities: And next to the impiety of denying his existence, is the temerity of prying into his nature and essence, decrees and attributes.

But lest you should think, that my *piety* has here got the better of my *philosophy*, I shall support my opinion, if it needs any support, by a very great authority. I might cite all the divines almost, from the foundation of Christianity, who have ever treated of this or any other theological subject: But I shall confine myself, at present, to one equally celebrated for piety and philosophy. It is Father MALEBRANCHE,* who, I remember, thus expresses himself: 'One ought not so much (says he) to call God a spirit, in order to express positively what he is, as in order to signify that he is not matter. He is a Being infinitely perfect: Of this we cannot doubt. But in the

¹ *Recherche de la vérité*, liv. 3, chap. 9.

same manner as we ought not to imagine, even supposing him corporeal, that he is clothed with a human body, as the ANTHROPOMORPHITES* asserted, under colour that that figure was the most perfect of any; so neither ought we to imagine, that the Spirit of God has human ideas, or bears *any* resemblance to our spirit; under colour that we know nothing more perfect than a human mind. We ought rather to believe, that as he comprehends the perfections of matter without being material . . . he comprehends also the perfections of created spirits, without being spirit, in the manner we conceive spirit: That his true name is, *He that is*, or in other words, Being without restriction, All Being, the Being infinite and universal.

After so great an authority, DEMEA, replied PHILO, as that which you have produced, and a thousand more, which you might produce, it would appear ridiculous in me to add my sentiment, or express my approbation of your doctrine. But surely, where reasonable men treat these subjects, the question can never be concerning the *being*, but only the *nature* of the Deity. The former truth, as you well observe, is unquestionable and self-evident. Nothing exists without a cause; and the original cause of this universe (whatever it be)* we call God; and piously ascribe to him every species of perfection. Whoever scruples this fundamental truth deserves every punishment, which can be inflicted among philosophers, to wit, the greatest ridicule, contempt and disapprobation. But as all perfection is entirely relative, we ought never to imagine, that we comprehend the attributes of this divine Being, or to suppose, that his perfections have any analogy or likeness to the perfections of a human creature. Wisdom, thought, design, knowledge; these we justly ascribe to him; because these words are honourable among men, and we have no other language or other conceptions, by which we can express our adoration of him. But let us beware, lest we think, that our ideas any wise correspond to his perfections, or that his attributes have any resemblance to these qualities among men. He is infinitely superior to our limited view and comprehension; and is more the object of worship in the temple, than of disputation in the schools.

In reality, CLEANTHES, continued he, there is no need of having recourse to that affected scepticism, so displeasing to you, in order to come at this determination. Our ideas* reach no farther than our

experience: We have no experience of divine attributes and operations: I need not conclude my syllogism: You can draw the inference yourself. And it is a pleasure to me (and I hope to you too) that just reasoning and sound piety here concur in the same conclusion, and both of them establish the adorably mysterious and incomprehensible nature of the supreme Being.

Not to lose any time in circumlocutions, said CLEANTHES, addressing himself to DEMEA, much less in replying to the pious declamations of PHILO; I shall briefly explain how I conceive this matter. Look round the world: Contemplate the whole and every part of it: You will find it to be nothing but one great machine, subdivided into an infinite number of lesser machines, which again admit of subdivisions, to a degree beyond what human senses and faculties can trace and explain. All these various machines, and even their most minute parts, are adjusted to each other with an accuracy, which ravishes into admiration all men, who have ever contemplated them. The curious adapting of means to ends, throughout all nature, resembles exactly, though it much exceeds, the productions of human contrivance; of human design, thought, wisdom, and intelligence. Since therefore the effects resemble each other, we are led to infer, by all the rules of analogy, that the causes also resemble; and that the Author of nature is somewhat similar to the mind of man; though possessed of much larger faculties, proportioned to the grandeur of the work, which he has executed. By this argument *a posteriori*, and by this argument alone, do we prove at once the existence of a Deity, and his similarity to human mind and intelligence.

I shall be so free, CLEANTHES, said DEMEA, as to tell you, that from the beginning, I could not approve of your conclusion concerning the similarity of the Deity to men; still less can I approve of the mediums, by which you endeavour to establish it. What! No demonstration of the being of a God! No abstract arguments! No proofs *a priori*! Are these, which have hitherto been so much insisted on by philosophers, all fallacy, all sophism? Can we reach no farther in this subject than experience¹ and probability? I will not say, that this is betraying the cause of a Deity: But surely, by this affected candour, you give advantage to atheists, which they

¹ [moral evidence substituted for experience, and then experience restored.]

never could obtain, by the mere dint of argument and reasoning.

What I chiefly scruple in this subject, said PHILO, is not so much, that all religious arguments are by CLEANTHES reduced to experience, as that they appear not to be even the most certain and irrefragable of that inferior kind. That a stone will fall, that fire will burn, that the earth has solidity, we have observed a thousand and a thousand times; and when any new instance of this nature is presented, we draw without hesitation the accustomed inference. The exact similarity of the cases gives us a perfect assurance of a similar event; and a stronger evidence is never desired nor sought after. But wherever you depart, in the least, from the similarity of the cases, you diminish proportionably the evidence; and may at last bring it to a very weak *analogy*, which is confessedly liable to error and uncertainty. After having experienced the circulation of the blood in human creatures, we make no doubt that it takes place in Titius and Mævius: But from its circulation in frogs and fishes, it is only a presumption, though a strong one, from analogy, that it takes place in men and other animals. The analogical reasoning is much weaker, when we infer the circulation of the sap in vegetables from our experience that the blood circulates in animals; and those, who hastily followed that imperfect analogy, are found, by more accurate experiments, to have been mistaken.

If we see a house, CLEANTHES, we conclude, with the greatest certainty, that it had an architect or builder; because this is precisely that species of effect, which we have experienced to proceed from that species of cause. But surely you will not affirm, that the universe bears such a resemblance to a house, that we can with the same certainty infer a similar cause, or that the analogy is here entire and perfect. The dissimilitude is so striking, that the utmost you can here pretend to is a guess, a conjecture, a presumption concerning a similar cause; and how that pretension will be received in the world, I leave you to consider.

It would surely be very ill received, replied CLEANTHES; and I should be deservedly blamed and detested, did I allow, that the proofs of a Deity amounted to no more than a guess or conjecture. But is the whole adjustment of means to ends in a house and in the universe so slight a resemblance? The œconomy of final causes? The order, proportion, and arrangement of every part? Steps of a stair are plainly contrived, that human legs may use them in mount-

ing; and this inference is certain and infallible. Human legs are also contrived for walking and mounting; and this inference, I allow, is not altogether so certain, because of the dissimilarity which you remark; but does it, therefore, deserve the name only of presumption or conjecture?

Good God! cried DEMEA, interrupting him, where are we? Zealous defenders of religion allow, that the proofs of a Deity fall short of perfect evidence! And you, PHILO, on whose assistance I depended, in proving the adorable mysteriousness of the divine nature, do you assent to all these extravagant opinions of CLEANTHES? For what other name can I give them? Or why spare my censure, when such principles are advanced, supported by such an authority, before so young a man as PAMPHILUS?

You seem not to apprehend, replied PHILO, that I argue with CLEANTHES in his own way; and by showing him the dangerous consequences of his tenets, hope at last to reduce him to our opinion. But what sticks most with you, I observe, is the representation which CLEANTHES has made of the argument *a posteriori*; and finding that that argument is likely to escape your hold and vanish into air, you think it so disguised, that you can scarcely believe it to be set in its true light. Now, however much I may dissent, in other respects, from the dangerous principles of CLEANTHES, I must allow, that he has fairly represented that argument; and I shall endeavour so to state the matter to you, that you will entertain no farther scruples with regard to it.

Were a man to abstract from every thing which he knows or has seen, he would be altogether incapable, merely from his own ideas, to determine what kind of scene the universe must be, or to give the preference to one state or situation of things above another. For as nothing, which he clearly conceives, could be esteemed impossible or implying a contradiction,* every chimaera of his fancy would be upon an equal footing; nor could he assign any just reason, why he adheres to one idea or system, and rejects the others, which are equally possible.

Again; after he opens his eyes, and contemplates the world, as it really is, it would be impossible for him, at first, to assign the cause of any one event; much less, of the whole of things or of the universe. He might set his fancy a rambling; and she might bring him in an infinite variety of reports and representations. These

would all be possible; but being all equally possible, he would never, of himself, give a satisfactory account for his preferring one of them to the rest. Experience alone can point out to him the true cause of any phenomenon.

Now according to this method of reasoning, DEMA, it follows (and is, indeed, tacitly allowed by CLEANTHES himself) that order, arrangement, or the adjustment of final causes is not, of itself, any proof of design; but only so far as it has been experienced to proceed from that principle. For aught we can know *a priori*, matter may contain the source or spring of order originally, within itself, as well as mind does; and there is no more difficulty in conceiving, that the several elements, from an internal unknown cause, may fall into the most exquisite arrangement, than to conceive that their ideas, in the great, universal mind, from a like internal, unknown cause, fall into that arrangement. The equal possibility of both these suppositions is allowed. But by experience we find (according to CLEANTHES), that there is a difference between them. Throw several pieces of steel together, without shape or form; they will never arrange themselves so as to compose a watch: Stone, and mortar, and wood, without an architect, never erect a house. But the ideas in a human mind, we see, by an unknown, inexplicable economy, arrange themselves so as to form the plan of a watch or house. Experience, therefore, proves, that there is an original principle of order in mind, not in matter. From similar effects we infer similar causes. The adjustment of means to ends¹ is alike in the universe, as in a machine of human contrivance. The causes, therefore, must be resembling.

I was from the beginning scandalised, I must own, with this resemblance, which is asserted, between the Deity and human creatures; and must conceive it to imply such a degradation of the supreme Being as no sound theist could endure. With your assistance, therefore, DEMA, I shall endeavour to defend what you justly call the adorable mysteriousness of the divine nature, and shall refute this reasoning of CLEANTHES; provided he allows, that I have made a fair representation of it.

When CLEANTHES had assented, PHILO, after a short pause, proceeded in the following manner.

¹ [means to ends for final causes.]

That all inferences, CLEANTHES, concerning fact, are founded on experience, and that all experimental reasonings are founded on the supposition, that similar causes prove similar effects, and similar effects similar causes; I shall not, at present, much dispute with you. But observe, I entreat you, with what extreme caution all just reasoners proceed in the transferring of experiments to similar cases. Unless the cases be exactly similar, they repose no perfect confidence in applying their past observation to any particular phenomenon. Every alteration of circumstances occasions a doubt concerning the event; and it requires new experiments to prove certainly, that the new circumstances are of no moment or importance. A change in bulk, situation, arrangement, age, disposition of the air, or surrounding bodies; any of these particulars may be attended with the most unexpected consequences: And unless the objects be quite familiar to us, it is the highest temerity to expect with assurance, after any of these changes, an event similar to that which before fell under our observation. The slow and deliberate steps of philosophers, here, if any where, are distinguished from the precipitate march of the vulgar, who, hurried on by the smallest similitude, are incapable of all discernment or consideration.

But can you think, CLEANTHES, that your usual phlegm* and philosophy have been preserved in so wide a step as you have taken, when you compared to the universe houses, ships, furniture, machines; and from their similarity in some circumstances inferred a similarity in their causes? Thought, design, intelligence, such as we discover in men and other animals, is no more than one of the springs and principles of the universe, as well as heat or cold, attraction or repulsion, and a hundred others, which fall under daily observation. It is an active cause, by which some particular parts of nature, we find, produce alterations on other parts. But can a conclusion, with any propriety, be transferred from parts to the whole? Does not the great disproportion bar all comparison and inference? From observing the growth of a hair, can we learn any thing concerning the generation of a man? Would the manner of a leaf's blowing,* even though perfectly known, afford us any instruction concerning the vegetation of a tree?

But allowing that we were to take the *operations* of one part of nature upon another for the foundation of our judgment concerning

the *origin* of the whole (which never can be admitted); yet why select so minute, so weak, so bounded a principle as the reason and design of animals is found to be upon this planet? What peculiar privilege has this little agitation of the brain which we call thought,* that we must thus make it the model of the whole universe? Our partiality in our own favour does indeed present it on all occasions: But sound philosophy ought carefully to guard against so natural an illusion.

So far from admitting, continued PHILO, that the operations of a part can afford us any just conclusion concerning the origin of the whole, I will not allow any one part to form a rule for another part, if the latter be very remote from the former. Is there any reasonable ground to conclude, that the inhabitants of other planets possess thought, intelligence, reason, or any thing similar to these faculties in men? When nature has so extremely diversified her manner of operation in this small globe; can we imagine, that she incessantly copies herself throughout so immense a universe? And if thought, as we may well suppose, be confined merely to this narrow corner, and has even there so limited a sphere of action; with what propriety can we assign it for the original cause of all things? The narrow views of a peasant, who makes his domestic economy the rule for the government of kingdoms, is in comparison a pardonable sophism.

But were we ever so much assured, that a thought and reason, resembling the human, were to be found throughout the whole universe, and were its activity elsewhere vastly greater and more commanding than it appears in this globe: Yet I cannot see, why the operations of a world, constituted, arranged, adjusted, can with any propriety be extended to a world, which is in its embryo-state, and is advancing towards that constitution and arrangement. By observation, we know somewhat of the economy, action, and nourishment of a finished animal; but we must transfer with great caution that observation to the growth of a fetus in the womb, and still more, to the formation of an animalcule* in the loins of its male parent. Nature, we find, even from our limited experience, possesses an infinite number of springs and principles, which incessantly discover themselves on every change of her position and situation. And what new and unknown principles would actuate her in so new and unknown a situation as that of the formation of

a universe, we cannot, without the utmost temerity, pretend to determine.

[A very small part of this great system, during a very short time, is very imperfectly discovered to us: And do we thence pronounce decisively concerning the origin of the whole?]¹

Admirable conclusion! Stone, wood, brick, iron, brass, have not, at this time, in this minute globe of earth, an order or arrangement without human art and contrivance: Therefore the universe could not originally attain its order and arrangement, without something similar to human art. But is a part of nature a rule for another part very wide of the former? Is it a rule for the whole?² Is a very small part a rule for the universe? Is nature in one situation, a certain rule for³ nature in another situation, vastly different from the former?

And can you blame me, CLEANTHES, if I here imitate the prudent reserve of SIMONIDES, who, according to the noted story,⁴ being asked by HIERO, *What God was?* desired a day to think of it, and then two days more; and after that manner continually prolonged the term, without ever bringing in his definition or description? Could you even blame me, if I had answered at first, *that I did not know*, and was sensible that this subject lay vastly beyond the reach of my faculties? You might cry out sceptic and railier as much as you pleased: But having found, in so many other subjects, much more familiar, the imperfections and even contradictions of human reason, I never should expect any success from its feeble conjectures, in a subject, so sublime, and so remote from the sphere of our observation. When two *species* of objects have always been observed to be conjoined together, I can *infer*, by custom, the existence of one wherever I see the existence of the other: And this I call an argument from experience.* But how this argument can have place, where the objects, as in the present case,⁵ are single, individual, without parallel, or specific resemblance, may be difficult to explain. And will any man tell me with a serious countenance, that an orderly universe must arise from some thought and art, like the human; because we have experience of it? To ascertain this reasoning, it were requisite, that we had experience of the

¹ [This paragraph transferred from p. 37.] ² [whole for world.]

³ [a certain rule for precisely similar to.]

⁴ [Cf. Cicero, *De Natura Deorum*, Bk. 1, 22.]

⁵ [concerning the origin of the world omitted.]

origin of worlds; and it is not sufficient surely, that we have seen ships and cities arise from human art and contrivance.

PHILO was proceeding in this vehement manner, somewhat between jest and earnest, as it appeared to me; when he observed some signs of impatience in CLEANTHES, and then immediately stopped short. What I had to suggest, said CLEANTHES, is only that you would not abuse terms, or make use of popular expressions to subvert philosophical reasonings. You know, that the vulgar often distinguish reason from experience, even where the question relates only to matter of fact and existence; though it is found, where that *reason* is properly analysed, that it is nothing but a species of experience. To prove by experience the origin of the universe from mind is not more contrary to common speech than to prove the motion of the earth from the same principle. And a cavalier might raise all the same objections to the COPERNICAN system, which you have urged against my reasonings. Have you other earths, might he say, which you have seen to move? Have . . .

Yes! cried PHILO, interrupting him, we have other earths. Is not the moon another earth, which we see to turn round its centre? Is not Venus another earth, where we observe the same phenomenon? Are not the revolutions of the sun also a confirmation, from analogy, of the same theory? All the planets, are they not earths, which revolve about the sun? Are not the satellites moons, which move round Jupiter and Saturn, and along with these primary planets, round the sun? These analogies and resemblances, with others, which I have not mentioned, are the sole proofs of the COPERNICAN system: And to you it belongs to consider, whether you have any analogies of the same kind to support your theory.

In reality, CLEANTHES, continued he, the modern system of astronomy is now so much received by all enquirers, and has become so essential a part even of our earliest education, that we are not commonly very scrupulous in examining the reasons upon which it is founded. It is now become a matter of mere curiosity to study the first writers on that subject, who had the full force of prejudice to encounter, and were obliged to turn their arguments on every side, in order to render them popular and convincing. But if we peruse GALILEO's famous *Dialogues** concerning the system of the world, we shall find, that great genius, one of the sublimest that ever existed, first bent all his endeavours to prove, that there was no

foundation for the distinction commonly made between elementary and celestial substances. The schools,* proceeding from the illusions of sense, had carried this distinction very far; and had established the latter substances to be ingenerable, incorruptible, unalterable, impassible; and had assigned all the opposite qualities to the former. But GALILEO, beginning with the moon, proved its similarity in every particular to the earth; its convex figure, its natural darkness when not illuminated, its density, its distinction into solid and liquid, the variations of its phases, the mutual illuminations of the earth and moon, their mutual eclipses, the inequalities of the lunar surface, &c. After many instances of this kind, with regard to all the planets, men plainly saw, that these bodies became proper objects of experience; and that the similarity of their nature enabled us to extend the same arguments and phenomena from one to the other.

In this cautious proceeding of the astronomers, you may read your own condemnation, CLEANTHES; or rather may see, that the subject in which you are engaged exceeds all human reason and enquiry. Can you pretend to show any such similarity between the fabric of a house, and the generation of a universe? Have you ever seen nature in any such situation as resembles the first arrangement of the elements? Have worlds ever been formed under your eye? and have you had leisure to observe the whole progress of the phenomenon, from the first appearance of order to its final consummation? If you have, then cite your experience, and deliver your theory.

from eternity, and not any other succession, or no succession at all. If there be no necessarily existent Being, any supposition, which can be formed, is equally possible; nor is there any more absurdity in nothing's having existed from eternity, than there is in that succession of causes, which constitutes the universe. What was it, then, which determined something to exist rather than nothing, and bestowed being on a particular possibility, exclusive of the rest? *External causes*, there are supposed to be none. *Chance* is a word without a meaning. Was it *nothing*? But that can never produce any thing. We must, therefore, have recourse to a necessarily existent Being, who carries the *REASON* of his existence in himself; and who cannot be supposed not to exist without an express contradiction. There is consequently such a Being, that is, there is a Deity.

I shall not leave it to PHILO, said CLEANTHES (though I know that the starting objections is his chief delight), to point out the weakness of this metaphysical reasoning. It seems to me so obviously ill-grounded, and at the same time of so little consequence to the cause of true piety and religion, that I shall myself venture to show the fallacy of it.

I shall begin with observing, that there is an evident absurdity in pretending to demonstrate a matter of fact, or to prove it by any arguments *a priori*. Nothing is demonstrable, unless the contrary implies a contradiction.* Nothing, that is distinctly conceivable, implies a contradiction. Whatever we conceive as existent, we can also conceive as non-existent. There is no Being, therefore, whose non-existence implies a contradiction. Consequently there is no Being, whose existence is demonstrable. I propose this argument as entirely decisive, and am willing to rest the whole controversy upon it.

It is pretended that the Deity is a necessarily existent Being; and this necessity of his existence is attempted to be explained by asserting, that, if we knew his whole essence or nature, we should perceive it to be as impossible for him not to exist as for twice two not to be four. But it is evident, that this can never happen, while our faculties remain the same as at present. It will still be possible for us, at any time, to conceive the non-existence of what we formerly conceived to exist; nor can the mind ever lie under a necessity of supposing any object to remain always in being; in the same manner as we lie under a necessity of always conceiving

PART IX

BUT if so many difficulties attend the argument *a posteriori*, said DEMEA; had we not better adhere to that simple and sublime argument *a priori*, which, by offering to us infallible demonstration, cuts off at once all doubt and difficulty? By this argument, too, we may prove the INFINITY of the divine attributes, which, I am afraid, can never be ascertained with certainty from any other topic. For how can an effect, which either is finite, or, for aught we know, may be so; how can such an effect, I say, prove an infinite cause? The unity too of the divine nature, it is very difficult, if not absolutely impossible, to deduce merely from contemplating the works of nature; nor will the uniformity alone of the plan, even were it allowed, give us any assurance of that attribute. Whereas the argument *a priori* . . .

You seem to reason, DEMEA, interposed CLEANTHES, as if those advantages and conveniences in the abstract argument were full proofs of its solidity. But it is first proper, in my opinion, to determine what argument of this nature you choose to insist on; and we shall afterwards, from itself, better than from its *useful* consequences, endeavour to determine what value we ought to put upon it.

The argument,* replied DEMEA, which I would insist on is the common one. Whatever exists must have a cause or reason of its existence; it being absolutely impossible for any thing to produce itself, or be the cause of its own existence. In mounting up, therefore, from effects to causes, we must either go on in tracing an infinite succession, without any ultimate cause at all, or must at last have recourse to some ultimate cause, that is *necessarily* existent: Now that the first supposition is absurd may be thus proved. In the infinite chain or succession of causes and effects, each single effect is determined to exist by the power and efficacy of that cause which immediately preceded; but the whole eternal chain or succession, taken together, is not determined or caused by any thing: And yet it is evident that it requires a cause or reason, as much as any particular object, which begins to exist in time. The question is still reasonable, why this particular succession of causes existed

twice two to be four. The words, therefore, *necessary existence*, have no meaning; or, which is the same thing, none that is consistent.

But farther; why may not the material universe be the necessarily existent Being, according to this pretended explication of necessity? We dare not affirm that we know all the qualities of matter; and for aught we can determine, it may contain some qualities, which, were they known, would make its non-existence appear as great a contradiction as that twice two is five. I find only one argument employed to prove, that the material world is not the necessarily existent Being; and this argument is derived from the contingency both of the matter and the form of the world. 'Any particle of matter', it is said,¹ 'may be *conceived* to be annihilated; and any form may be *conceived* to be altered. Such an annihilation or alteration, therefore, is not impossible.' But it seems a great partiality not to perceive, that the same argument extends equally to the Deity, so far as we have any conception of him; and that the mind can at least imagine² him to be non-existent, or his attributes to be altered. It must be some unknown, inconceivable qualities, which can make his non-existence appear impossible, or his attributes unalterable: And no reason can be assigned, why these qualities may not belong to matter. As they are altogether unknown and inconceivable, they can never be proved incompatible with it.

Add to this, that in tracing an eternal succession of objects, it seems absurd to inquire for a general cause or first Author. How can any thing, that exists from eternity, have a cause, since that relation implies a priority in time and a beginning of existence?

In such a chain too, or succession of objects, each part is caused by that which preceded it, and causes that which succeeds it. Where then is the difficulty? But the WHOLE, you say, wants a cause. I answer, that the uniting of these parts into a whole, like the uniting of several distinct counties into one kingdom, or several distinct members into one body, is performed merely by an arbitrary act of the mind, and has no influence on the nature of things. Did I show you the particular causes of each individual in a collection of twenty particles of matter, I should think it very unreasonable, should you afterwards ask me, what was the cause of

¹ Dr. Clarke.*

² [imagine for conceive.]

the whole twenty. This is sufficiently explained in explaining the cause of the parts.

[Though the reasonings, which you have urged, CLEANTHES, may well excuse me, said PHILO, from starting any farther difficulties; yet I cannot forbear insisting still upon another topic. It is observed by arithmeticians, that the products of 9 compose always either 9 or some lesser product of 9; if you add together all the characters, of which any of the former products is composed. Thus, of 18, 27, 36, which are products of 9, you make 9 by adding 1 to 8, 2 to 7, 3 to 6. Thus 369 is a product also of 9; and if you add 3, 6, and 9, you make 18, a lesser product of 9.² To a superficial observer, so wonderful a regularity may be admired as the effect either of chance or design; but a skilful algebraist immediately concludes it to be the work of necessity, and demonstrates, that it must for ever result from the nature of these numbers. Is it not probable, I ask, that the whole economy of the universe is conducted by a like necessity, though no human algebra can furnish a key which solves the difficulty? And instead of admiring the order of natural beings, may it not happen, that, could we penetrate into the intimate nature of bodies, we should clearly see why it was absolutely impossible, they could ever admit of any other disposition? So dangerous is it to introduce this idea of necessity into the present question! And so naturally does it afford an inference directly opposite to the religious hypothesis!

But dropping all these abstractions, continued PHILO; and confining ourselves to more familiar topics; I shall venture to add an observation,³ that the argument *a priori* has seldom been found very convincing, except to people of a metaphysical head, who have accustomed themselves to abstract reasoning, and who find- ing from mathematics, that the understanding frequently leads to truth, through obscurity, and contrary to first appearances, have transferred the same habit of thinking to subjects where it ought not to have place. Other people, even of good sense and the best

¹ [Passage in brackets is written on the reverse side of the last sheet of Part IX with marks to indicate point of insertion. The whole passage is scored out by Hume and then the instruction added, also by Hume, on the margin: 'Print this passage.']

² *République de Lettres*, Août, 1685.

³ [The original opening of this concluding paragraph runs: I shall venture, said PHILO, to add to these reasonings of CLEANTHES an observation.]

inclined to religion, feel always some deficiency in such arguments, though they are not perhaps able to explain distinctly where it lies. A certain proof, that men ever did, and ever will, derive their religion from other sources than from this species of reasoning.

PART X

IT is my opinion, I own, replied D^EME^A, that each man feels, in a manner, the truth of religion within his own breast; and from a consciousness of his imbecility and misery, rather than from any reasoning, is led to seek protection from that Being, on whom he and all nature is dependent. So anxious or so tedious are even the best scenes of life, that futurity is still the object of all our hopes and fears. We incessantly look forward, and endeavour, by prayers, adoration, and sacrifice, to appease those unknown powers, whom we find, by experience, so able to afflict and oppress us. Wretched creatures that we are! What resource for us amidst the innumerable ills of life, did not religion suggest some methods of atonement, and appease those terrors, with which we are incessantly agitated and tormented?*

I am indeed persuaded, said P^HILO, that the best and indeed the only method of bringing every one to a due sense of religion is by just representations of the misery and wickedness of men. And for that purpose a talent of eloquence and strong imagery is more requisite than that of reasoning and argument. For is it necessary to prove, what every one feels within himself? It is only necessary to make us feel it, if possible, more intimately and sensibly.

The people, indeed, replied D^EME^A, are sufficiently convinced of this great and melancholy truth. The miseries of life, the unhappiness of man, the general corruptions of our nature, the unsatisfactory enjoyment of pleasures, riches, honours; these phrases have become almost proverbial in all languages. And who can doubt of what all men declare from their own immediate feeling and experience?

In this point, said P^HILO, the learned are perfectly agreed with the vulgar; and in all letters, *sacred* and *profane*, the topic of human misery has been insisted on with the most pathetic eloquence that sorrow and melancholy could inspire. The poets, who speak from sentiment, without a system, and whose testimony has therefore the more authority, abound in images of this nature. From HOMER down to Dr. YOUNG,* the whole inspired tribe have ever

Tended the sick, busiest from couch to couch.
And over them triumphant DEATH his dart
Shook, but delay'd to strike, tho' oft invok'd
With vows, as their chief good and final hope.¹

The disorders of the mind, continued DEMA, though more secret, are not perhaps less dismal and vexatious. Remorse, shame, anguish, rage, disappointment, anxiety, fear, dejection, despair; who has ever passed through life without cruel inroads from these tormentors? How many have scarcely ever felt any better sensations? Labour and poverty, so abhorred by every one, are the certain lot of the far greater number: And those few privileged persons, who enjoy ease and opulence, never reach contentment or true felicity. All the goods of life united would not make a very happy man. But all the ills united would make a wretch indeed; and any one of them almost (and who can be free from every one), nay often the absence of one good (and who can possess all) is sufficient to render life ineligible.

Were a stranger to drop, on a sudden, into this world, I would show him, as a specimen of its ills, an hospital full of diseases, a prison crowded with malefactors and debtors, a field of battle strowed with carcasses, a fleet floundering in the ocean, a nation languishing under tyranny, famine, or pestilence. To turn the gay side of life to him, and give him a notion of its pleasures; whither should I conduct him? to a ball, to an opera, to court? He might justly think, that I was only showing him a diversity of distress and sorrow.

There is no evading such striking instances, said PHILLO, but by apologies, which still farther aggravate the charge. Why have all men, I ask, in all ages, complained incessantly of the miseries of life? . . . They have no just reason, says one: These complaints proceed only from their discontented, repining, anxious disposition. . . . And can there possibly, I reply, be a more certain foundation of misery, than such a wretched temper?

But if they were really as unhappy as they pretend, says my antagonist, why do they remain in life? . . .

Not satisfied with life, afraid of death.*

¹ [Milton: *Paradise Lost*, xi.]

This is the secret chain, say I, that holds us. We are terrified, not bribed to the continuance of our existence.

It is only a false delicacy, he may insist, which a few refined spirits indulge, and which has spread these complaints among the whole race of mankind. . . . And what is this delicacy, I ask, which you blame? Is it any thing but a greater sensibility to all the pleasures and pains of life? and if the man of a delicate, refined temper, by being so much more alive than the rest of the world, is only so much more unhappy; what judgment must we form in general of human life?

Let men remain at rest, says our adversary; and they will be easy. They are willing artificers of their own misery. . . . No! reply I; an anxious languor follows their repose: Disappointment, vexation, trouble, their activity and ambition.

I can observe something like what you mention in some others, replied CLEANTHES: But I confess, I feel little or nothing of it in myself; and hope that it is not so common as you represent it.

If you feel not human misery yourself, cried DEMA, I congratulate you on so happy a singularity. Others, seemingly the most prosperous, have not been ashamed to vent their complaints in the most melancholy strains. Let us attend to the great, the fortunate Emperor, CHARLES V, when, tired with human grandeur, he resigned all his extensive dominions into the hands of his son. In the last harangue, which he made on that memorable occasion, he publicly avowed, *that the greatest prosperities which he had ever enjoyed, had been mixed with so many adversities, that he might truly say he had never enjoyed any satisfaction or contentment.** But did the retired life, in which he sought for shelter, afford him any greater happiness? If we may credit his son's account, his repentance commenced the very day of his resignation.

CICERO's fortune, from small beginnings, rose to the greatest lustre and renown; yet what pathetic complaints of the ills of life do his familiar letters, as well as philosophical discourses, contain? And suitably to his own experience, he introduces CATO, the great, the fortunate CATO, protesting in his old age, that, had he a new life in his offer, he would reject the present.*

Ask yourself, ask any of your acquaintance, whether they would live over again the last ten or twenty years of their life. No! but the next twenty, they say, will be better.

And from the dregs of life, hope to receive
What the first sprightly running could not give.¹

Thus at last they find (such is the greatness of human misery; it reconciles even contradictions) that they complain, at once, of the shortness of life, and of its vanity and sorrow.

And is it possible, CLEANTHES, said PHILO, that after all these reflections, and infinitely more, which might be suggested, you can still persevere in your anthropomorphism, and assert the moral attributes of the Deity, his justice, benevolence, mercy, and rectitude, to be of the same nature with these virtues in human creatures? His power we allow infinite: Whatever he wills is executed: But neither man nor any other animal are happy: Therefore he does not will their happiness. His wisdom is infinite: He is never mistaken in choosing the means to any end: But the course of nature tends not to human or animal felicity: Therefore it is not established for that purpose. Through the whole compass of human knowledge, there are no inferences more certain and infallible than these. In what respect, then, do his benevolence and mercy resemble the benevolence and mercy of men?

EPICURUS's old questions are yet unanswered. Is he willing to prevent evil, but not able? then is he impotent. Is he able, but not willing? then is he malevolent. Is he both able and willing? whence then is evil?*

You ascribe, CLEANTHES (and I believe justly) a purpose and intention to nature. But what, I beseech you, is the object of that curious artifice and machinery, which she has displayed in all animals? The preservation alone of individuals and propagation of the species. It seems enough for her purpose, if such a rank be barely upheld in the universe, without any care or concern for the happiness of the members that compose it. No resource for this purpose: No machinery, in order merely to give pleasure or ease: No fund of pure joy and contentment: No indulgence without some want or necessity accompanying it. At least, the few phenomena of this nature are overbalanced by opposite phenomena of still greater importance.

Our sense of music, harmony, and indeed beauty of all kinds, gives satisfaction, without being absolutely necessary to the pre-

¹ [Dryden, *Aurengzebe*, Act iv, sc. i. Hume has written 'hope' for 'think'.]

servation and propagation of the species. But what racking pains, on the other hand, arise from gout, gravel, megrims, tooth-aches, rheumatisms; where the injury to the animal-machinery is either small or incurable? Mirth, laughter, play, frolic, seem gratuitous satisfactions, which have no farther tendency: Spleen, melancholy, discontent, superstition, are pains of the same nature. How then does the divine benevolence display itself, in the sense of you anthropomorphites? None but we mystics, as you were pleased to call us, can account for this strange mixture of phenomena, by deriving it from attributes, infinitely perfect, but incomprehensible.

And have you at last, said CLEANTHES smiling, betrayed your intentions, PHILO? Your long agreement with DEMEA did indeed a little surprise me; but I find you were all the while erecting a concealed battery against me. And I must confess, that you have now fallen upon a subject worthy of your noble spirit of opposition and controversy. If you can make out the present point, and prove mankind to be unhappy or corrupted, there is an end at once of all religion. For to what purpose establish the natural attributes of the Deity, while the moral are still doubtful and uncertain?*

You take umbrage very easily, replied DEMEA, at opinions the most innocent, and the most generally received even amongst the religious and devout themselves: And nothing can be more surprising than to find a topic like this, concerning the wickedness and misery of man, charged with no less than atheism and profaneness. Have not all pious divines and preachers, who have indulged their rhetoric on so fertile a subject; have they not easily, I say, given a solution of any difficulties which may attend it? This world is but a point in comparison of the universe: This life but a moment in comparison of eternity. The present evil phenomena, therefore, are rectified in other regions, and in some future period of existence. And the eyes of men, being then opened to larger views of things, see the whole connection of general laws, and trace, with adoration, the benevolence and rectitude of the Deity, through all the mazes and intricacies of his providence.

No! replied CLEANTHES, No! These arbitrary suppositions can never be admitted, contrary to matter of fact, visible and uncontroverted. Whence can any cause be known but from its known effects? Whence can any hypothesis be proved but from the apparent phenomena? To establish one hypothesis upon another is

building entirely in the air; and the utmost we ever attain, by these conjectures and fictions, is to ascertain the bare possibility of our opinion; but never can we, upon such terms, establish its reality.

The only method of supporting divine benevolence (and it is what I willingly embrace) is to deny absolutely the misery and wickedness of man. Your representations are exaggerated: Your melancholy views mostly fictitious: Your inferences contrary to fact and experience. Health is more common than sickness: Pleasure than pain: Happiness than misery. And for one vexation which we meet with, we attain, upon computation, a hundred enjoyments.

Admitting your position, replied PHILO, which yet is extremely doubtful, you must, at the same time, allow, that, if pain be less frequent than pleasure, it is infinitely more violent and durable. One hour of it is often able to outweigh a day, a week, a month of our common insipid enjoyments: And how many days, weeks, and months are passed by several in the most acute torments? Pleasure, scarcely in one instance, is ever able to reach ecstasy and rapture: And in no one instance can it continue for any time at its highest pitch and altitude. The spirits evaporate; the nerves relax; the fabric is disordered; and the enjoyment quickly degenerates into fatigue and uneasiness. But pain often, Good God, how often! rises to torture and agony; and the longer it continues, it becomes still more genuine agony and torture. Patience is exhausted; courage languishes; melancholy seizes us; and nothing terminates our misery but the removal of its cause, or another event, which is the sole cure of all evil, but which, from our natural folly, we regard with still greater horror and consternation.

But not to insist upon these topics, continued PHILO, though most obvious, certain, and important; I must use the freedom to admonish you, CLEANTHES, that you have put this controversy upon a most dangerous issue, and are unawares introducing a total scepticism into the most essential articles of natural and revealed theology. What! no method of fixing a just foundation for religion, unless we allow the happiness of human life, and maintain a continued existence even in this world, with all our present pains, infirmities, vexations, and follies, to be eligible and desirable! But this is contrary to every one's feeling and experience: It is contrary to an authority so established as nothing can subvert: No decisive proofs

can ever be produced against this authority; nor is it possible for you to compute, estimate, and compare all the pains and all the pleasures in the lives of all men and of all animals: And thus by your resting the whole system of religion on a point, which, from its very nature, most for ever be uncertain, you tacitly confess, that that system is equally uncertain.

But allowing you, what never will be believed; at least, what you never possibly¹ can prove, that animal, or at least,² human happiness, in this life, exceeds its misery; you have yet done nothing: For this is not, by any means, what we expect from infinite power, infinite wisdom, and infinite goodness. Why is there any misery at all in the world? Not by chance surely. From some cause then. Is it from the intention of the Deity? But he is perfectly benevolent. Is it contrary to his intention? But he is almighty. Nothing can shake the solidity of this reasoning, so short, so clear, so decisive; except we assert, that these subjects exceed all human capacity, and that our common measures of truth and falsehood are not applicable to them; a topic, which I have all along insisted on, but which you have, from the beginning, rejected with scorn and indignation.

But I will be contented to retire still from this intrenchment.³ For I deny that you can ever force me in it: I will allow, that pain or misery in man is *compatible* with infinite power and goodness in the Deity, even in your sense of these attributes: What are you advanced by all these concessions? A mere possible compatibility is not sufficient. You must *prove* these pure, unmixed, and uncontrollable attributes from the present mixed and confused phenomena, and from these alone. A hopeful⁴ undertaking! Were the phenomena ever so pure and unmixed, yet being finite, they would be insufficient for that purpose. How much more, where they are also so jarring and discordant?

Here, CLEANTHES, I find myself at ease in my argument. Here I triumph. Formerly, when we argued concerning the natural attributes of intelligence and design, I needed all my sceptical and metaphysical subtlety to elude your grasp. In many views of the

¹ [possibly omitted and then restored.]

² [animal, or at least added.]

³ [retrenchment for defence: altered to intrenchment by Hume's nephew.]

⁴ [hopeful for strange.]

universe, and of its parts, particularly the latter, the beauty and fitness of final causes strike us with such irresistible force, that all objections appear (what I believe¹ they really are) mere cavils and sophisms; nor can we then imagine how it was ever possible for us to repose any weight on them. But there is no view of human life, or of the condition of mankind, from which, without the greatest violence, we can infer the moral attributes, or learn that infinite benevolence, conjoined with infinite power and infinite wisdom, which we must discover by the eyes of faith alone. It is your turn now to tug the labouring oar, and to support your philosophical subtilties against the dictates of plain reason and experience.

¹ [I believe *for* perhaps. This alteration may have been made in 1776.]

PART XI

I SCRUPLE not to allow, said CLEANTHES, that I have been apt to suspect the frequent repetition of the word, *infinite*, which we meet with in all theological writers, to savour more of panegyric than of philosophy, and that any purposes of reasoning, and even of religion, would be better served, were we to rest contented with more accurate and more moderate expressions. The terms, *admirable*, *excellent*, *superlatively great*, *wise*, and *holy*; these sufficiently fill the imaginations of men; and any thing beyond, besides that it leads into absurdities, has no influence on the affections or sentiments. Thus, in the present subject, if we abandon all human analogy, as seems your intention, DEMEA, I am afraid we abandon all religion, and retain no conception of the great object of our adoration. If we preserve human analogy, we must for ever find it impossible to reconcile any mixture of evil in the universe with infinite attributes; much less, can we ever prove the latter from the former. But supposing the Author of nature to be finitely perfect, though far exceeding mankind; a satisfactory account may then be given of natural and moral evil, and every untoward phenomenon be explained and adjusted. A less evil may then be chosen, in order to avoid a greater: Inconveniences be submitted to, in order to reach a desirable end: And in a word, benevolence, regulated by wisdom, and limited by necessity, may produce just such a world as the present. You, PHILO, who are so prompt at starting views, and reflections, and analogies; I would gladly hear, at length, without interruption, your opinion of this new theory; and if it deserve our attention, we may afterwards, at more leisure, reduce it into form.

My sentiments, replied PHILO, are not worth being made a mystery of; and therefore, without any ceremony, I shall deliver what occurs to me with regard to the present subject. It must, I think, be allowed, that, if a very limited intelligence, whom we shall suppose utterly unacquainted with the universe, were assured, that it were the production of a very good, wise, and powerful Being, however finite, he would, from his conjectures, form *beforehand* a different notion of it from what we find it to be by experience; nor would he ever imagine, merely from these attributes of the cause, of which

he is informed, that the effect could be so full of vice and misery and disorder, as it appears in this life. Supposing now, that this person were brought into the world, still assured, that it was the workmanship of such a sublime and benevolent Being; he might, perhaps, be surprised at the disappointment; but would never retract his former belief, if founded on any very solid argument; since such a limited intelligence must be sensible of his own blindness and ignorance, and must allow, that there may be many solutions of those phenomena, which will for ever escape his comprehension. But supposing, which is the real case with regard to man, that this creature is not antecedently convinced of a supreme intelligence, benevolent, and powerful, but is left to gather such a belief from the appearances of things; this entirely alters the case, nor will he ever find any reason for such a conclusion. He may be fully convinced of the narrow limits of his understanding; but this will not help him in forming an inference concerning the goodness of superior powers, since he must form that inference from what he knows, not from what he is ignorant of. The more you exaggerate his weakness and ignorance, the more diffident you render him, and give him the greater suspicion, that such subjects are beyond the reach of his faculties. You are obliged, therefore, to reason with him merely from the known phenomena, and to drop every arbitrary supposition or conjecture.

Did I show you a house or palace, where there was not one apartment convenient or agreeable; where the windows, doors, fires, passages, stairs, and the whole œconomy of the building were the source of noise, confusion, fatigue, darkness, and the extremes of heat and cold; you would certainly blame the contrivance, without any farther examination. The architect would in vain display his subtlety, and prove to you, that if this door or that window were altered, greater ills would ensue. What he says, may be strictly true: The alteration of one particular, while the other parts of the building remain, may only augment the inconveniences. But still you would assert in general, that, if the architect had had skill and good intentions, he might have formed such a plan of the whole, and might have adjusted the parts in such a manner, as would have remedied all or most of these inconveniences. His ignorance, or even your own ignorance of such a plan, will never convince you of the impossibility of it. If you find many inconveni-

ences and deformities in the building, you will always, without entering into any detail, condemn the architect.

In short, I repeat the question: Is the world considered in general, and as it appears to us in this life,¹ different from what a man or such a limited being would, *beforehand*, expect from a very powerful, wise, and benevolent Deity? It must be strange prejudice to assert the contrary. And from thence I conclude, that, however consistent the world may be, allowing certain suppositions and conjectures, with the idea of such a Deity, it can never afford us an inference concerning his existence. The consistence is not absolutely denied, only the inference.* Conjectures, especially where infinity is excluded from the divine attributes, may, perhaps, be sufficient to prove a consistence; but can never be foundations for any inference.

There seem to be *four* circumstances, on which depend all, or the greatest part of the ills, that molest sensible creatures; and it is not impossible but all these circumstances may be necessary and unavoidable. We know so little beyond common life, or even of common life, that, with regard to the œconomy of a universe, there is no conjecture, however wild, which may not be just; nor any one, however plausible, which may not be erroneous. All that belongs to human understanding, in this deep ignorance and obscurity, is to be sceptical, or at least cautious; and not to admit of any hypothesis, whatever; much less, of any which is supported by no appearance of probability. Now this I assert to be the case with regard to all the causes of evil, and the circumstances on which it depends. None of them appear to human reason, in the least degree, necessary or unavoidable; nor can we suppose them such, without the utmost licence of imagination.

The *first* circumstance which introduces evil, is that contrivance or œconomy of the animal creation, by which pains, as well as pleasures, are employed to excite all creatures to action, and make them vigilant in the great work of self-preservation. Now pleasure alone, in its various degrees, seems to human understanding sufficient for this purpose. All animals might be constantly in a state of enjoyment; but when urged by any of the necessities of nature, such as thirst, hunger, weariness; instead of pain, they

¹ [in this life added.]

might feel a diminution of pleasure, by which they might be prompted to seek that object, which is necessary to their subsistence. Men pursue pleasure as eagerly as they avoid pain; at least, might have been so constituted. It seems, therefore, plainly possible to carry on the business of life without any pain. Why then is any animal ever rendered susceptible of such a sensation? If animals can be free from it an hour, they might enjoy a perpetual exemption from it; and it required as particular a contrivance of their organs to produce that feeling, as to endow them with sight, hearing, or any of the senses. Shall we conjecture, that such a contrivance was necessary, without any appearance of reason? And shall we build on that conjecture as on the most certain truth?

But a capacity of pain would not alone produce pain, were it not for the *second* circumstance, viz. the conducting of the world by general laws; and this seems nowise necessary to a very perfect Being. It is true; if every thing were conducted by particular volitions,* the course of nature would be perpetually broken, and no man could employ his reason in the conduct of life. But might not other particular volitions remedy this inconvenience? In short, might not the Deity exterminate all ill, wherever it were to be found; and produce all good, without any preparation or long progress of causes and effects?

Besides, we must consider, that, according to the present oeconomy of the world, the course of nature, though supposed exactly regular, yet to us appears not so, and many events are uncertain, and many disappoint our expectations. Health and sickness, calm and tempest, with an infinite number of other accidents, whose causes are unknown and variable, have a great influence both on the fortunes of particular persons and on the prosperity of public societies: And indeed all human life, in a manner, depends on such accidents. A Being, therefore, who knows the secret springs of the universe, might easily, by particular volitions, turn all these accidents to the good of mankind, and render the whole world happy, without discovering himself in any operation. A fleet, whose purposes were salutary to society, might always meet with a fair wind: Good princes enjoy sound health and long life: Persons born to power and authority, be framed with good tempers and virtuous dispositions. A few such events as these, regularly and wisely conducted, would change the face of the world; and yet

would no more seem to disturb the course of nature or confound human conduct, than the present oeconomy of things, where the causes are secret, and variable, and compounded. Some small touches, given to CALIGULA's brain in his infancy, might have converted him into a TRAJAN: One wave, a little higher than the rest, by burying CÆSAR and his fortune in the bottom of the ocean, might have restored liberty to a considerable part of mankind. There may, for aught we know, be good reasons, why providence interposes not in this manner; but they are unknown to us: And though the mere supposition, that such reasons exist, may be sufficient to *save* the conclusion concerning the divine attributes, yet surely it can never be sufficient to *establish* that conclusion.

If every thing in the universe be conducted by general laws, and if animals be rendered susceptible of pain, it scarcely seems possible but some ill must arise in the various shocks of matter, and the various concurrence and opposition of general laws: But this ill would be very rare, were it not for the *third* circumstance, which I proposed to mention, viz. the great frugality with which all powers and faculties are distributed to every particular being. So well adjusted are the organs and capacities of all animals, and so well fitted to their preservation, that, as far as history or tradition reaches, there appears not to be any single species which has yet been extinguished in the universe.¹ Every animal has the requisite endowments; but these endowments are bestowed with so scrupulous an oeconomy, that any considerable diminution must entirely destroy the creature. Wherever one power is increased, there is a proportional abatement in the others. Animals, which excel in swiftness, are commonly defective in force. Those, which possess both, are either imperfect in some of their senses, or are oppressed with the most craving wants. The human species, whose chief excellency is reason and sagacity, is of all others the most necessitous, and the most deficient in bodily advantages; without clothes, without arms, without food, without lodging, without any

¹ [In *Hume's* manuscript there is here the following note, scored out: CÆSAR, speaking of the woods in Germany, mentions some animals as subsisting there, which are now utterly extinct. *De Bello Gallico* lib. 6. These, and some few more instances, may be exceptions to the proposition here delivered. STRABO (lib. 4) quotes from POLYBIUS an account of an animal about the Tyrol, which is not now to be found. If POLYBIUS was not deceived, which is possible, the animal must have been then very rare, since STRABO cites but one authority, and speaks doubtfully.]

convenience of life, except what they owe to their own skill and industry. In short, nature seems to have formed an exact calculation of the necessities of her creatures; and like a *rigid master*, has afforded them little more powers or endowments, than what are strictly sufficient to supply those necessities. An *indulgent parent* would have bestowed a large stock, in order to guard against accidents, and secure the happiness and welfare of the creature, in the most unfortunate concurrence of circumstances. Every course of life would not have been so surrounded² with precipices, that the least departure from the true path, by mistake or necessity, must involve us in misery and ruin. Some reserve, some fund would have been provided to ensure happiness; nor would the powers and the necessities have been adjusted with so rigid an œconomy. The Author of nature is inconceivably powerful: His force is supposed great, if not altogether inexhaustible: Nor is there any reason, as far as we can judge, to make him observe this strict frugality in his dealings with his creatures. [It would have been better, were his power extremely limited, to have created fewer animals, and to have endowed these with more faculties for their happiness and preservation. A builder is never esteemed prudent, who undertakes a plan, beyond what his stock will enable him to finish.]

[In order to cure most of the ills of human life, I require not that man should have the wings of the eagle, the swiftness of the stag, the force of the ox, the arms of the lion, the scales of the crocodile or rhinoceros; much less do I demand the sagacity of an angel or cherubim. I am contented to take an increase in one single power or faculty of his soul. Let him be endowed with a greater propensity to industry and labour; a more vigorous spring and activity of mind; a more constant bent to business and application. Let the whole species possess naturally an equal diligence with that which many individuals are able to attain by habit and reflection; and the most beneficial consequences, without any alloy of ill, is the immediate and necessary result of this endowment. Almost all the moral, as well as natural evils of human life arise from idleness; and were

¹ [little for no.] ² [surrounded for bordered.]

³ [This passage in brackets is first written on the margin, then scored out and rewritten on the last page of Part XI, with marks to indicate point of insertion. The next paragraph, also here given in brackets, is added, in immediate sequence, on the same page.]

our species, by the original constitution of their frame, exempt from this vice or infirmity, the perfect cultivation of land, the improvement of arts and manufactures, the exact execution of every office and duty, immediately follow; and men at once may fully reach that state of society, which is so imperfectly attained by the best-regulated government. But as industry is a power, and the most valuable of any, nature seems determined, suitably to her usual maxims, to bestow it on men with a very sparing hand; and rather to punish him severely for his deficiency in it, than to reward him for his attainments. She has so contrived his frame, that nothing but the most violent necessity can oblige him to labour; and she employs all his other wants to overcome, at least in part, the want of diligence, and to endow him with some share of a faculty, of which she has thought fit naturally to bereave him. Here our demands may be allowed very humble, and therefore the more reasonable.¹ If we required the endowments of superior penetration and judgment, of a more delicate taste of beauty, of a nicer sensibility to benevolence and friendship; we might be told, that we impiously pretend to break the order of nature, that we want to exalt ourselves into a higher rank of being, that the presents which we require, not being suitable to our state and condition, would only be pernicious to us. But it is hard; I dare to repeat it, it is hard, that being placed in a world so full of wants and necessities; where almost every being and element is either our foe or refuses us their assistance; we should also have our own temper to struggle with, and should be deprived of that faculty which can alone fence against these multiplied evils.]

The *fourth* circumstance, whence arises the misery and ill of the universe, is the inaccurate workmanship of all the springs and principles of the great machine of nature. It must be acknowledged, that there are few parts of the universe, which seem not to serve some purpose, and whose removal would not produce a visible defect and disorder in the whole. The parts hang all together; nor can one be touched without affecting the rest, in a greater or less degree. But at the same time, it must be observed, that none of these parts or principles, however useful, are so accurately adjusted, as to keep precisely within those bounds in which their

¹ [reasonable for legitimate.]

utility consists; but they are, all of them, apt, on every occasion, to run into the one extreme or the other. One would imagine, that this grand production had not received the last hand of the maker; so little finished is every part, and so coarse are the strokes, with which it is executed. Thus, the winds are requisite to convey the vapours along the surface of the globe, and to assist men in navigation: But how oft, rising up to tempests and hurricanes, do they become pernicious? Rains are necessary to nourish all the plants and animals of the earth: But how often are they defective? how often excessive? Heat is requisite to all life and vegetation; but is not always found in the due proportion. On the mixture and secretion of the humours and juices of the body depend the health and prosperity of the animal: But the parts perform not regularly their proper function. What more useful than all the passions of the mind, ambition, vanity, love, anger? But how oft do they break their bounds, and cause the greatest convulsions in society? There is nothing so advantageous in the universe, but what frequently becomes pernicious, by its excess or defect; nor has nature guarded, with the requisite accuracy, against all disorder or confusion. The irregularity is never, perhaps,¹ so great as to destroy any species; but is often sufficient to involve the individuals in ruin and misery.

On the concurrence, then, of these *four* circumstances does all or the greatest part of natural evil* depend. Were all living creatures incapable of pain, or were the world administered by particular volitions, evil never could have found access into the universe: And were animals endowed with a large stock of powers and faculties, beyond what strict necessity requires; or were the several springs and principles of the universe so accurately framed as to preserve always the just temperament and medium; there must have been very little ill in comparison of what we feel at present. What then shall we pronounce on this occasion? Shall we say, that these circumstances are not necessary, and that they might easily have been altered in the contrivance of the universe? This decision seems too presumptuous for creatures so blind and ignorant. Let us be more modest in our conclusions. Let us allow, that, if the goodness of the Deity (I mean a goodness like the human) could be

¹ [perhaps added.]

established on any tolerable reasons¹ *a priori*, these phenomena, however untoward, would not be sufficient to subvert that principle; but might easily, in some unknown manner, be reconcilable to it. But let us still assert, that as this goodness is not antecedently established, but must be inferred from the phenomena, there can be no grounds for such an inference, while there are so many ills in the universe, and while these ills might so easily have been remedied, as far as human understanding can be allowed to judge on such a subject. I am sceptic enough to allow, that the bad appearances, notwithstanding all my reasonings, may be compatible with such attributes as you suppose: But surely they can never prove these attributes. Such a conclusion cannot result from scepticism; but must arise from the phenomena, and from our confidence in the reasonings which we deduce from these phenomena.

[Look round this universe. What an immense profusion of beings, animated and organized, sensible and active! You admire this prodigious variety and fecundity. But inspect a little more narrowly these living existences, the only beings worth regarding. How hostile and destructive to each other! How insufficient all of them for their own happiness! How contemptible or odious to the spectator! The whole presents nothing but the idea of a blind nature, impregnated by a great² vivifying principle, and pouring forth from her lap, without discernment or parental care, her maimed and abortive children.³]

Here the MANICHEAN system* occurs as a proper hypothesis to solve the difficulty: And no doubt, in some respects, it is very specious, and has more probability than the common hypothesis, by giving a plausible account of the strange mixture of good and ill which appears in life. But if we consider, on the other hand, the perfect uniformity and agreement of the parts of the universe, we shall not discover in it any marks of the combat of a malevolent with a benevolent Being. There is indeed an opposition of pains and pleasures in the feelings of sensible creatures: But are not all the operations of nature carried on by an opposition of principles, of hot and cold, moist and dry, light and heavy? The true conclu-

¹ [on any tolerable reasons added.] ² [a great for an infinitely.]

³ [This passage in brackets is written, with marks to indicate point of insertion, on the last sheet of Part XI, immediately prior to the other additions given above, pp. 110-11.]

sion is, that the original source¹ of all things is entirely indifferent to all these principles, and has no more regard to good above ill than to heat above cold, or to drought above moisture, or to light above heavy.

There may *four* hypotheses be framed concerning the first² causes of the universe: *that* they are endowed with perfect goodness, *that* they have perfect malice, *that* they are opposite and have both goodness and malice, *that* they have neither goodness nor malice. Mixed phenomena can never prove the two former unmixed principles. And the uniformity and steadiness of general laws seem to oppose the third. The fourth, therefore, seems by far the most probable.

What I have said concerning natural evil will apply to moral, with little or no variation; and we have no more³ reason to infer, that the rectitude of the supreme Being resembles human rectitude than that his benevolence resembles the human. Nay, it will be thought, that we have still greater cause to exclude from him moral sentiments, such as we feel them; since moral evil, in the opinion of many, is much more predominant above moral good than natural evil above natural good.

But even though this should not be allowed, and though the virtue, which is in mankind, should be acknowledged much superior to the vice; yet so long as there is any vice at all in the universe, it will very much puzzle you anthropomorphites, how to account for it. You must assign a cause for it, without having recourse to the first cause. But as every effect must have a cause, and that cause another; you must either carry on the progression *in infinitum*, or rest on⁴ that original principle, who is the ultimate cause of all things. . . .*

Hold! Hold! cried DEMEA: Whither does your imagination hurry you? I joined in alliance with you, in order to prove the incompressible nature of the divine Being, and refute the principles of CLEANTHES, who would measure every thing by a human rule and standard. But I now find you running into all the topics of the greatest libertines and infidels;⁵ and betraying that holy cause,

¹ [source for cause.] ² [first for original.]

³ [no more for the same.]

⁴ [rest on for stop at.]

⁵ [infidels for sceptics.]

which you seemingly espoused. Are you secretly, then, a more dangerous enemy than CLEANTHES himself?

And are you so late in perceiving it? replied CLEANTHES. Believe me, DEMEA; your friend PHILO, from the beginning, has been amusing himself at both our expence; and it must be confessed, that the injudicious reasoning of our vulgar theology has given him but too just a handle of ridicule. The total infirmity of human reason, the absolute incomprehensibility of the divine nature, the great and universal misery and still greater wickedness of men; these are strange topics surely to be so fondly cherished by orthodox divines and doctors. In ages of stupidity and ignorance, indeed, these principles may safely be espoused; and perhaps, no views of things are more proper to promote superstition, than such as encourage the blind amazement, the diffidence, and melancholy of mankind. But at present . . .

Blame not so much, interposed PHILO, the ignorance of these reverend gentlemen. They know how to change their style with the times. Formerly it was a most popular theological topic to maintain, that human life was vanity and misery, and to exaggerate all the ills and pains which are incident to men. But of late years, divines, we find, begin to retract this position, and maintain, though still with some hesitation, that there are more goods than evils, more pleasures than pains, even in this life. When religion stood entirely upon temper and education, it was thought proper to encourage melancholy; as indeed, mankind never have recourse to superior powers so readily as in that disposition. But as men have now learned to form principles, and to draw consequences, it is necessary to change the batteries, and to make use of such arguments as will endure, at least some scrutiny and examination. This variation is the same (and from the same causes) with that which I formerly remarked with regard to scepticism.

Thus PHILO continued to the last his spirit of opposition, and his censure of established opinions. But I could observe, that DEMEA did not at all relish the latter part of the discourse; and he took occasion soon after, on some pretence or other, to leave the company.
