

## FT Wilshire US Mega Cap Index<sup>SM</sup>

The FT Wilshire US Mega Cap Index<sup>SM</sup> (FT Wilshire Mega Cap<sup>SM</sup>) is a subset of the FT Wilshire 5000 Index<sup>SM</sup> (FT Wilshire 5000<sup>SM</sup>). Designed to represent the U.S. mega cap market, the FT Wilshire Mega Cap index is the FT Wilshire 5000 (float) with the components of the FT Wilshire Mid Cap<sup>SM</sup>, FT Wilshire US Small Cap<sup>SM</sup> and FT Wilshire US Micro Cap<sup>SM</sup> excluded.

### Membership

To be included in the FT Wilshire Mega Cap Index, an issue must:

- Be the primary equity issue: a common stock or REIT;
- Have its primary market listing in the United States;
- Be a company with a combined full capitalization above the 70<sup>th</sup> percentile largest stock in the FT Wilshire 5000 by full market capitalization in February and August;
- Apply mega cap and mid cap buffers for companies ranked between the 65<sup>th</sup> and 75<sup>th</sup> percentile by full market cap; and
- Not be a bulletin-board issue. These issues are not included because they generally do not have consistently readily available prices.

The company's primary issue for index valuation is determined based on the following criteria:

- Market capitalization;
- Trading volume;
- Institutional holdings; and
- Conversion rules (for companies with multiple share classes).

### Adjustments & Maintenance

Changes to the composition of the FT Wilshire Mega Cap Index and updates of component shares and float factors are based on the following rules:

#### Composition Changes

The composition of the FT Wilshire Mega Cap Index is reviewed monthly. Additions and deletions are made after the close of trading on the third Friday of the month and are pre-announced by the second day prior to the implementation date.

- Additions include any new non-component company – an IPO or new exchange listing – that meets the index inclusion standards as of the close of trading on the prior end of month.
- In addition to the scheduled composition reviews, any issue spun-off company from a component company may be included in the parent index if the spun-off company meets the membership requirements of the FT Wilshire 5000 and maintains the integrity of the index.
- Deletions include any issue that becomes a pink sheet or otherwise stops trading for ten consecutive days. The issue is removed at its latest quoted value or at \$0.01 if no recent quoted value is available. Until the monthly review, the issue remains in the indexes at its last exchange-traded price.
- Once a quarter, current component stocks with more than 20 non-trading days that have not been suspended are deleted. Suspended stocks are evaluated separately for removal.
- Once a quarter, current component companies with a float adjusted market capitalization of less than \$10 million or an annualized turnover rate of less than 10 percent are removed.
- In addition to the scheduled composition reviews, any issue that at any time fails to meet one or more of the index membership requirements is removed from the indexes as soon as prudently possible.

- The Wilshire Index Oversight Committee may, at its discretion and if it has determined a company to be in extreme financial distress, remove the company from a Wilshire Index to which that company belongs if the committee deems the removal necessary to protect the integrity of the index and interests of investors in products linked to that index.

### Share and Float Factor Updates

- Component shares and float factors are updated quarterly after the close of trading on the third Friday of March, June, September and December. The changes become effective at the opening of trading on the next business day.
- In addition to the scheduled shares and float factor reviews, if the cumulative impact of corporate actions during the period between scheduled updates changes a company's float-adjusted shares outstanding by ten percent (10%) or more, the company's shares and float factor are updated as soon as prudently possible. Share and float changes based on corporate actions are implemented using standard Wilshire Indexes procedures.
- Shares and float factors of bulletin-board and pink-sheet stocks are not adjusted until they are returned to exchange listings, except to account for stock splits and reverse splits. Companies that are re-listed as of the close of trading on the second Friday of each month will have their shares and float adjustments made at the same time as the monthly index additions and deletions, after the close of trading on the third Friday of each month.

### Share Treatment & Float Adjustment

The following rules describe the treatment of shares and the application of float factors in the FT Wilshire Mega Cap Index:

- Shares outstanding for thinly traded multiple classes of stock are combined into the primary issue's shares outstanding plus active secondary issues to reflect the company's total market capitalization;
- Float adjustments are based on block ownership of each class of stock, and then are combined to determine total float for a company's combined shares; and
- Float-adjustment factors will be implemented only if the blocked shares are greater than five percent (5%) of the company's total shares outstanding.

### Weighting

The index is weighted by float-adjusted market capitalization.

The FT Wilshire Indexes<sup>SM</sup> are calculated and distributed by Wilshire. It is not possible to invest directly in an index. Exposure to an asset class represented by an index may be available through investable instruments derived from that index. Wilshire makes no representations regarding the advisability of investing in investment products based on the Wilshire Indexes not sponsored, endorsed, sold or promoted by Wilshire. Index returns do not reflect payment of certain sales charges or fees an investor may pay to purchase the securities underlying the Index or investment vehicles intended to track the performance of the Index. The imposition of these fees and charges would cause actual performance of the securities/vehicles to be lower than the Index performance shown. Inclusion of a company in the Wilshire Indexes does not in any way reflect an opinion of Wilshire on the investment merits of the company.
