

Orchestrated Delivery Across Complex Salesforce Orgs

The Challenge

AI is accelerating Salesforce delivery across large enterprises. But at scale, complexity increases faster than velocity. Most AI tools still operate without full organizational context. They do not understand:

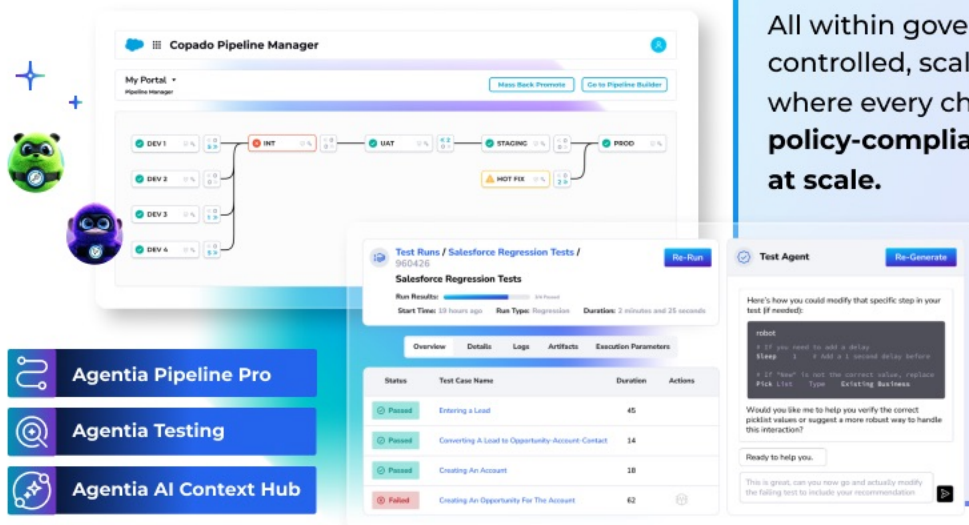

- Cross-org dependencies
- Multi-team release coordination
- Compliance and governance requirements

This creates risk. At the same time, enterprise teams face:

- Multiple production orgs and environments
- Parallel development streams across teams
- Strict compliance, audit, and security requirements
- High cost of release failures

Testing, governance, and release orchestration are often fragmented. Visibility breaks across teams. Control becomes inconsistent.

THE RESULT: Delayed enterprise releases, governance gaps, and increased operational risk.

Status	Test Case Name	Duration	Actions
Passed	Entering a Lead	45	
Passed	Converting A Lead to Opportunity-Account-Contact	14	
Passed	Creating An Account	18	
Failed	Creating An Opportunity For The Account	62	

The Solution

Agentia Pro embeds context-aware agents directly into enterprise delivery workflows. It extends Agentia Advanced by adding full lifecycle orchestration across teams, orgs, and environments. Built on Copado's DevOps foundation, Agentia Pro delivers:

- **Multi-org pipeline orchestration** with centralized control
- **AI powered by Org Intelligence** that understands metadata, dependencies, and architecture
- **End-to-end lifecycle management** from planning to production
- **Built-in compliance, governance, and auditability**

By unifying **Agentia Pipeline, Agentia Testing, and Agentia AI Context Hub**, Agentia Pro creates a single control plane for enterprise delivery. Agents do more than assist. They:

- Coordinate releases across pipelines
- Enforce policies and quality gates
- Predict risks and resolve issues
- Automate complex deployment decisions

All within governed processes. The result is controlled, scalable, enterprise-grade delivery where every change is: **traceable, validated, policy-compliant and ready for production at scale.**

Key Use Cases

Orchestrate Multi-Org Enterprise Releases

Manage deployments across multiple Salesforce orgs with centralized pipeline control.
Coordinate parallel teams, environments, and dependencies with full visibility.

Enforce Governance and Compliance at Scale

Apply policy controls, approvals, and audit trails across every change.
Ensure compliance without slowing down delivery.

Automate Complex Release Management

Run parallel pipelines with automated quality gates and promotion logic.
Reduce manual coordination across teams and environments.

AI-Driven Risk Prevention and Resolution

Use Org Intelligence to predict deployment risks, detect conflicts, and resolve issues faster.
Prevent failures before they impact production.

Enterprise Collaboration Across Teams

Unify developers, admins, QA, and release managers in one workflow.
Ensure alignment across global teams and large programs.

Ideal For

Agentia Pro is designed for Salesforce teams that:

- ✓ Manage multiple production orgs and complex architectures
- ✓ Run parallel development streams across teams
- ✓ Require strict governance, compliance, and auditability
- ✓ Have dedicated release managers or DevOps teams
- ✓ Need full CI/CD with enterprise-grade control
- ✓ Are ready to move toward automated and autonomous delivery

Business Outcomes

3x

Faster enterprise release cycles

10x

Faster root cause analysis across orgs

90%

Reduction in failed deployments

Full

Audit readiness across all releases

Increased team productivity at scale

Explore Agentia™

Agentia Pro extends the Agentia platform to support enterprise-scale delivery.

One platform. One lifecycle. Full control at every stage.
