

Agentia AI Context Hub

The Intelligence Behind Every Agent

AI agents are only as good as the context they're given. Without it, they guess. Agentia, Copado's Salesforce 360 delivery solution for the agentic era, embeds context-aware agents across the full lifecycle from Plan to Operate — and the AI Context Hub is what makes them trustworthy. By giving agents a real-time understanding of your Salesforce org, the Hub helps them generate safer code, resolve issues faster, and guide teams with insight grounded in how your org actually works.

Why Context Matters

Generic AI assistants don't know your org. They guess at field names, miss dependencies, hallucinate flows, and generate code that breaks on deployment. AI Context Hub consists of Org Intelligence, business-specific knowledge bases, and an ecosystem of integrations so every prompt and response is grounded in your real-time environment. AI Context Hub makes it so the AI your teams use is org-aware, deployment-safe, and trusted.

Customer Outcomes

80% reduction in org discovery time

50% faster production issue resolution

48x faster user stories & test creation

90% faster onboarding of new team members

Key Capabilities

	What It Does	Why It Matters
Org Intelligence	Continuously indexes metadata, automations, code, and data relationships across every connected org.	A single source of truth for humans and AI — always current, never last quarter's documentation.
Orchestrate Agent + Specialized Agents	Manages the specialized agents — Plan, Build, Test, Release, Operate — carrying context between tasks. Call a specific agent directly, or let Orchestrate coordinate them end-to-end.	No handoffs, no re-explaining. Context built in discovery flows into the code, tests, and docs that follow.
Visual Diagrams	Auto-generates ERDs, data models, process flows, and dependency maps from live org metadata.	Analysts, devs, and architects understand any org in minutes, not weeks.
Anywhere Integrations	Works inside VS Code, Slack, Microsoft Teams, and the Salesforce UI.	Context where work already happens — no tool-switching tax.

Use Cases

A living map of your org becomes a force multiplier across the work your team already does.

Org Discovery

Understand any org in minutes — not weeks — with AI-generated architecture maps, dependency graphs, and plain-language explanations of how everything fits together. Onboard new admins, devs, architects, and consultants with org-specific runbooks, training guides, and visual diagrams. Surface duplicate permission sets, unused code, and other technical debt for prioritized cleanup.

Org-Ready Code

Generate Apex, LWC, and configuration that references the fields, objects, validation rules, and permissions that actually exist in your org — validated against your sandbox and aligned to your team's coding standards. Catch impact and dependency issues before deploy, so changes ship without breaking production.

Agentforce

A dynamic map of your org means Agentforce agents are easier to spin up. AI Context Hub provides topics, actions, and grounding data straight from your real org. Agents are less likely to need rework to function in your specific configuration, because they're built against the same source of truth your team already uses.

Who It's For

Architects

Faster, smarter design and release decisions with full org visibility, impact analysis, and deployment planning.

Developers

High-quality, validated code that works the first time in your specific org configuration — and time reclaimed from Jira updates, release notes, and other manual work.

Admins & Support

Diagnose production errors — even from a screenshot or flow error email — and apply AI-validated fixes in minutes instead of days.

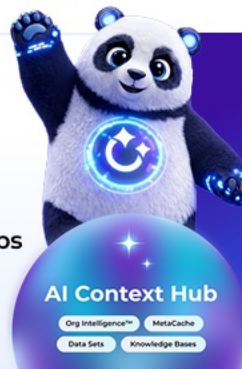

Business Analyst

Translate requirements into org-aware user stories and real-time diagrams.

Before vs. With AI Context Hub

Before AI Context Hub

- Hours lost navigating the Setup menu maze
- Code and flows that break on deploy
- Documentation that is stale the day it ships
- New hires productive in months
- Investigations that take days

With AI Context Hub

- AI-generated architecture map of your org
- Validated code and configuration — first try
- Living documentation that refreshes automatically
- New hires productive on Day 1
- Root cause and fix surfaced in minutes

Top Customer Pain Points Solved

"We don't know what's in our org."

Now you do, instantly.

"Delayed releases because of missed dependencies and rework."

Continuous impact analysis means no more broken metadata.

"Our consultants take weeks to ramp up."

Get value on Day 1 with auto-generated org maps, training guides, and runbooks.

"Fixing issues takes forever."

AI gives you the root cause and a fix — fast.
