

Digital Work Management Solution

The end-to-end fieldwork automation and mobility solution that moves your maintenance teams from paperwork to performance.

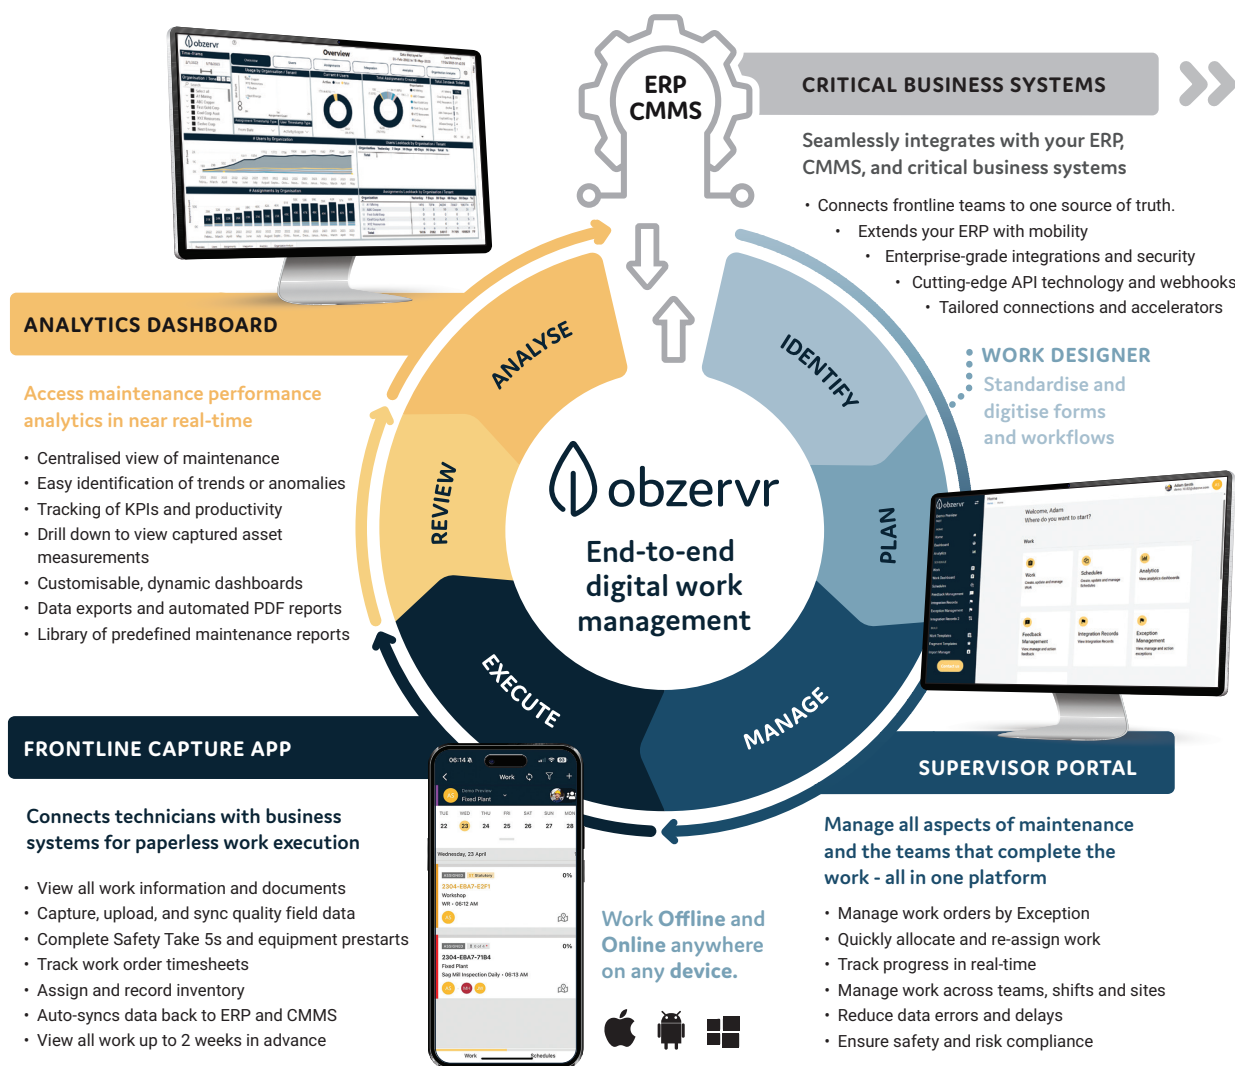

Obzervr transforms mining maintenance and boosts efficiency by enabling maintenance teams to manage all aspects of work execution digitally - in a single integrated platform.

A web-based platform and mobile app, Obzervr seamlessly integrates with your ERP, CMMS and critical business systems - connecting maintenance technicians, automating workflows, enabling quality field data capture, and delivering near real-time performance analytics and insights.

HIGHLY CONFIGURABLE AND SCALABLE

An out-of-the-box type solution, Obzervr has been designed to be highly configurable, fast to implement and easy to scale as organisational, site and capability needs change.

We work with your teams to configure a solution that aligns with your maintenance operations, then we support you through a phased implementation.

Built for mining maintenance

Boosts maintenance efficiency and empowers frontline teams

Obzervr is a true end-to-end digital solution built specifically for mining maintenance.

With paper-based processes and admin transformed into digital work execution and performance, mining organisations can:

- Boost maintenance efficiency
- Standardise maintenance execution
- Connect technicians with business systems
- Capture quality field data
- Improve safety and risk compliance
- Improve collaboration across sites and shifts
- Track maintenance progress and KPIs
- View performance analytics and insights
- Improve asset uptime and reliability

MORE TOOL TIME - LESS PAPERWORK

Obzervr has been designed to be intuitive, easy to use and configurable to align with how your maintenance teams work.

SUPERVISORS: SAVE 4 HRS PER DAY

Supervisors can quickly allocate, manage, track and review work orders, inspections and team performance in one interface - reducing admin, paperwork, data errors and delays.

TECHNICIANS: INCREASE TOOL TIME BY 10%

Can access all work information and safety tools via a mobile app - enabling them to work more efficiently and safely - anywhere, anytime, even when offline.

PLANNERS: SAVE 3 HRS ADMIN PER DAY

Planners can easily create, manage and update digital forms and workflows to ensure work orders and tasks are executed correctly, efficiently and consistently.

Specialists in digital transformation for mining maintenance

Obzervr was founded in 2015 with a vision of revolutionising the management of field operations, maintenance, compliance, and safety through technology and automation.

Our team comprises of innovative professionals from technology, software development, asset management and the natural resources sector. Collectively, we have over 100 years of mining maintenance experience so we understand the challenges that mine operators, managers, supervisors, and technicians face daily, and how technology and automation can help them work smarter, safer and more efficiently.

A BOOTS-ON-THE-GROUND SOLUTION PARTNER

We're a true boots-on-the-ground technology solution partner. We work closely with our clients to bring their maintenance strategies to life, streamline maintenance operations and improve asset performance through technology, automation and analytics.

When you choose Obzervr, you gain a partner in digital transformation and a solution that supports your asset management goals now and into the future.
