New Build

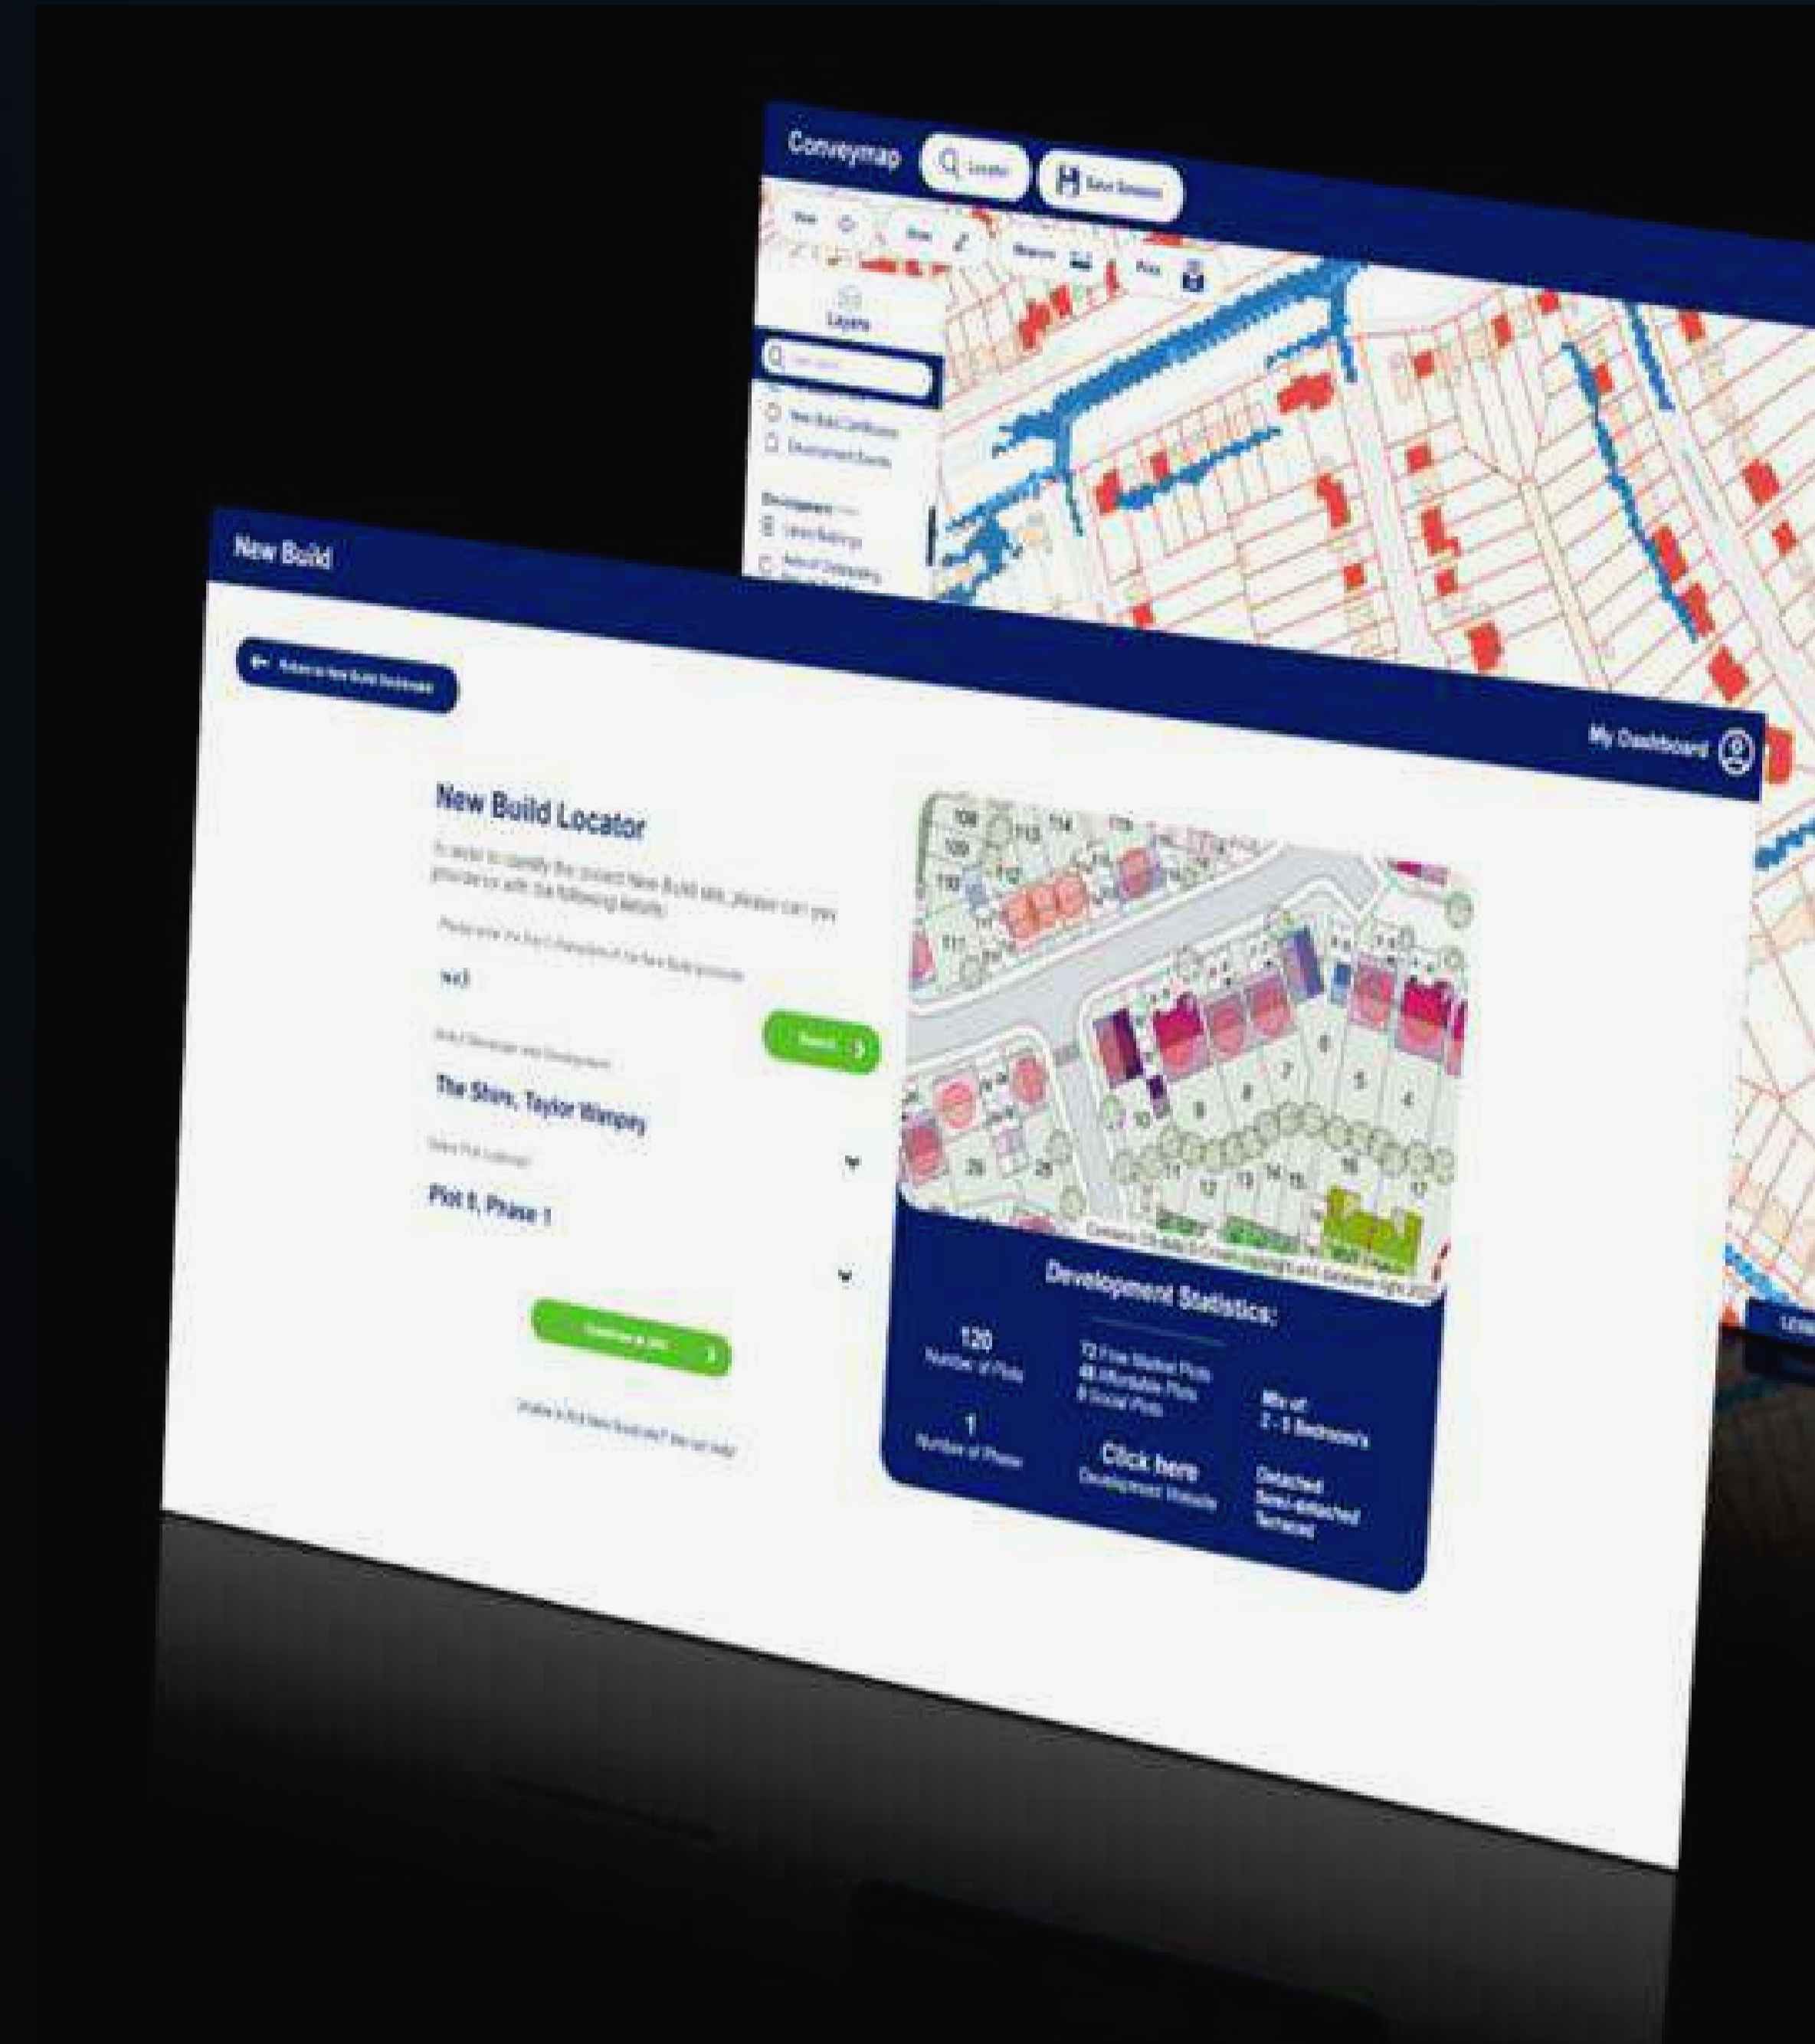

Understand every new build plot with greater precision

Summary

New Build is CLSQ's geospatial intelligence service for new build developments. Designed for lenders, developers, property professionals and data-driven organisations, it identifies where a new build site is located and where an individual property sits within that development at plot level.

By overlaying proprietary data onto a new build development plan, the service provides real-world geospatial data and risk information specific to each plot. Where available, it can also provide additional property-level detail, including floorplans and particulars.

New Build helps users assess sites and plots with greater clarity, supporting more informed decision-making across development, lending and property workflows.

Product Highlights

Plot-level identification within new build developments

Geospatial overlay of development plans

Real-world geospatial data and risk insight

Proprietary data applied at plot level

Designed for integration into platforms and workflows

Supports site and property-level assessment

Real-time delivery via API

Additional property detail where available, including floorplans and particulars

Key Features

Identifies where a new build site is located

Pinpoints where an individual property sits within a development

Supports site and plot-level analysis

Can include floorplans and property particulars where available

Provides plot-specific risk information

Overlays geospatial plans with proprietary CLSQ data

Enhances accuracy in new build assessment

API-enabled output for digital journeys and internal systems
