

Secure File Sharing for Business

A simple and reliable way to access, store, and share company files from any location.

RushFiles keeps your documents organized and easy to access across offices, remote teams, and external partners. It uses a clear folder structure your staff already understands and gives your company full control over access and data.

Why Businesses Choose RushFiles

Clear folder structure

Teams always know where files are stored.

Control over access

Admins decide who can view, edit, or share folders and can adjust permissions at any time.

Secure client sharing

Share files with clients or suppliers using passwords, expiration dates, and download limits.

Access from any device

Use it on web, desktop, or mobile, with offline access when required.

Easy administration

User management, folder permissions, and sharing rules can be handled without complex setup.

Protection against data loss

Versioning and recovery help restore files after ransomware damage or accidental changes.

What RushFiles Helps You Solve

- ◆ **Hard to maintain control as teams grow**
As more employees handle documents, keeping access structured becomes challenging without a central system.
- ◆ **Outdated file servers or VPN systems**
Replace slow, unreliable access with a stable file-sharing platform.
- ◆ **Unclear data handling practices**
Gain a clearer overview of where your files are stored and how access is managed.
- ◆ **Files stored across different tools and locations**
Bring documents into one structured system instead of spread across apps and devices.

Key Capabilities

Access and Collaboration

- Familiar folder structure your team already understands
- Web, desktop, and mobile apps
- Offline access with automatic updates
- File locking to avoid conflicting edits

Security and Control

- Encryption for files in storage and during transfer
- Device approval for safer access
- IP-based access controls when needed
- Audit logs for tracking activity

Sharing and External Access

- Passwords for shared links
- Expiration dates and download limits
- Activity tracking for shared files

Admin Controls

- Central panel for managing users and groups
- Folder access aligned with your organization
- Approve or block devices when needed
- Settings for managing sharing rules
