

Secure File Sharing Platform for Your Portfolio

RushFiles enables service providers to offer a controlled, reliable file sync and share solution to their customers. It uses a familiar folder structure, strong administrative controls, and a partner-first model that lets providers set pricing, own the customer relationship, and optionally deliver the service under their own brand.

Why Service Providers Choose RushFiles

Offer under your own brand

Offer the service with your pricing and customer relationship fully preserved.

Familiar structure, fewer tickets

Customers use a structure they already know, reducing questions and onboarding time.

Manage all customers in one place

One console to manage users, permissions, and sharing rules across tenants.

Multiple delivery options

RushFiles can be delivered as a cloud service, combined with local storage, or installed fully on-premise.

Low support effort

Stable performance and simple administration keep service work manageable.

Protection against data loss

Versioning and recovery help restore files quickly and reduce support requests.

What RushFiles Helps You Solve

Portfolio differentiation

- ◆ Add a controlled EFSS solution for customers who need more than consumer cloud drives.

Demand for data location control

- ◆ Serve businesses requiring EU hosting, in-country hosting, or on-premise installations.

High support volume from basic cloud tools

- ◆ Serve businesses requiring EU hosting, in-country hosting, or on-premise installations.

Need for revenue stability

- ◆ File sharing is a recurring, long-term service with low churn and predictable margins.

Key Capabilities

Access and Collaboration

- Familiar folder structure customers already understand
- Web, desktop, and mobile apps
- Offline access with automatic sync
- File locking to avoid conflicting edits

Security and Control

- Encryption during transfer and storage
- Device approval for controlled access
- IP-based access rules when required
- Audit logs for visibility across customer tenants

Sharing and External Access

- Passwords for shared links
- Expiration dates and download limits
- Activity tracking for shared files

Admin Controls

- Central panel for managing multiple customer tenants
- Folder access aligned with each customer's structure
- Approve or block devices
- Settings for managing sharing rules
