

July 30th, 2024

Dear Partners

This year, Notino is implementing an Electronic Data Interchange (EDI) system to streamline our data exchange and enable us to focus even more on developing our collaboration.

Both, direct EDI integration between our ERP systems and a simplified web environment will be available. All information regarding both options will be provided by our implementation partner, GRiT. They will ensure complete data exchange service for Notino, including supplier onboarding.

Over the next year, EDI will become the exclusive method of data exchange between Notino and our partners. GRiT will be fully available to facilitate a quick and successful implementation of EDI communication. In July and August 2024, GRiT representatives will contact your company with detailed information and an initial questionnaire. The aim is to provide you with maximum support in implementing the new process.

For suppliers integrated into EDI, we will also be able to offer Notino Supply Chain Financing through Roger, thanks to the simplified invoicing process. This will allow your invoices to be paid as early as three days after submission. More information can be found [here](#).

Please give maximum cooperation to Grit to ensure a smooth running of the entire process. I am delighted that EDI will simplify the daily agendas of both our teams, giving us even more time for further joint growth!

Best regards,

Matěj Látal

Procurement director Notino, s. r. o.
