

## MEDICAL SURVEILLANCE PROGRAM

# The best care for your employees

Levac Health & Safety is proud to collaborate with Occu-Med Health Services to deliver a **'medical surveillance'** program. This partnership reinforces our commitment to safeguarding worker health by proactively identifying risks, preventing occupational illnesses, and promoting a safer work environment.

### Who needs this?

This program is required by the Ministry of Labour, to protect the health of employees exposed to **Asbestos, Benzene, Coke Oven Emissions, Isocyanates, Lead** (inorganic and organic), **Mercury** (alkyl and non-alkyl compounds) and/or **Silica**.

### The Solution You've Been Searching For

Our onsite program brings nurses, technicians and portable x-ray equipment to your facility, saving you time and reducing your costs:

- Time away from work is minimized -- employees are seen at their place of work, reducing downtime and eliminating the need to travel to a physician's office.
- Expenses are reduced because there is no mileage/travel time incurred.
- Groups of employees can be done in a short amount of time, and testing of your entire team can be completed in hours or days, not weeks.

### The Service:

The medical surveillance program takes care of all of this:

- A mobile & onsite program
- Employee health assessment
- Pulmonary function test
- Chest X-Ray
- Reporting via a "Fit Letter" specified by the Ministry of Labour and produced for each employee tested.

## How it works:

1. You identify the list of employees that have a likelihood (or possibility) of exposure, and roughly how those employees split out over your shift schedule.
2. We schedule nurses, an x-ray team and support staff so that we can test your employees on their shift schedule. Together, we agree on the schedule dates & times.
3. You notify employees. Our team arrives and we get to work.

## What we need:

Our team needs a place to work: a boardroom, meeting room or empty office. We need functional, not pretty. We're flexible and will work with what you have as best as we can.
