

Professional Skill

- Proficient in Java, good at Linux bash.
- Proficient in Spring Boot, Redis, MyBatis, Metaq, Netty and other technology stacks. Proficient in network programming, multi-threading.
- Proficient in Graph DataBase, Relational Database and NoSQL Database, and good at MySQL optimization.
- Good programming style and has experience in designing architecture which DAU upto 10 million.

Working Experience

Alibaba

SRE 2020/05 - 2022/05

- Taobao Life project
 - Responsible for the server-side work, and started to work as a PM to complete the migration from the gamified skynet framework to the Taobao Java technology stack.
 - At the same time, the coding specification and logging specification were developed. As the project data
 - On the basis of the new framework, completed the migration of the data of photo display module. the construction of UGC framework, picture recommendation system. And complete friends photo timeline base on GDB (Graph DB).
 - As the person in charge of stability, combed the upstream and downstream of 200+ interfaces and middleware of Taobao Life project, produced traffic model, and developed
 - pressure test plan and contingency plan.

Shenghe Game

Software Engineer 2018/05 - 2020/04

- Emperor Moon Project
 - Responsible for the stability and module development.

- The pressure server implements a player behavior state machine, driven by messages, to simulate players performing operations and performing state transitions. The piezometric server can simulate concurrent 10k. The industry's traditional threaded piezometric test normally simulates 500 users, with a 20x increase in metrics.

Shanghai Heitao Interactive

Software Engineer 2018/05 - 2020/04

- Xuan Yuan Sword Project
 - Game server supporting functional server, including configuration, management, etc.
 - As a server-side developer, independently complete the development of multiple functional modules, and subsequent iterations after the launch. Owner of backend module development, complete front and backend development. Including the development of management backend, data kanban and other functions. As the Owner of Xuan Yuan Jian overseas service, completed the localization and SDK access of Korean server.
- Goblin's Tail Project
 - complete architecture design.

Education

- 2012/09 - 2017/06, B.S. in Department of Computer Science and Technology, **NorthEast Normal University(NENU)**
