2   Executive Summary

Red Cursor was engaged by Xref on the 17th of March, 2025 to perform web application penetration testing against their Xref Enterprise applications. These applications are used by companies to manage potential employee references and applications.

Then on the 9th of September 2025, a retest was performed against the initial findings. This report details the results of the retest.

This testing was designed to simulate a malicious anonymous user on the Internet as well as a malicious or compromised authenticated user.

After the retesting six security issues remained unfixed. The graph below shows the number and security rating of the risks identified during the engagement:
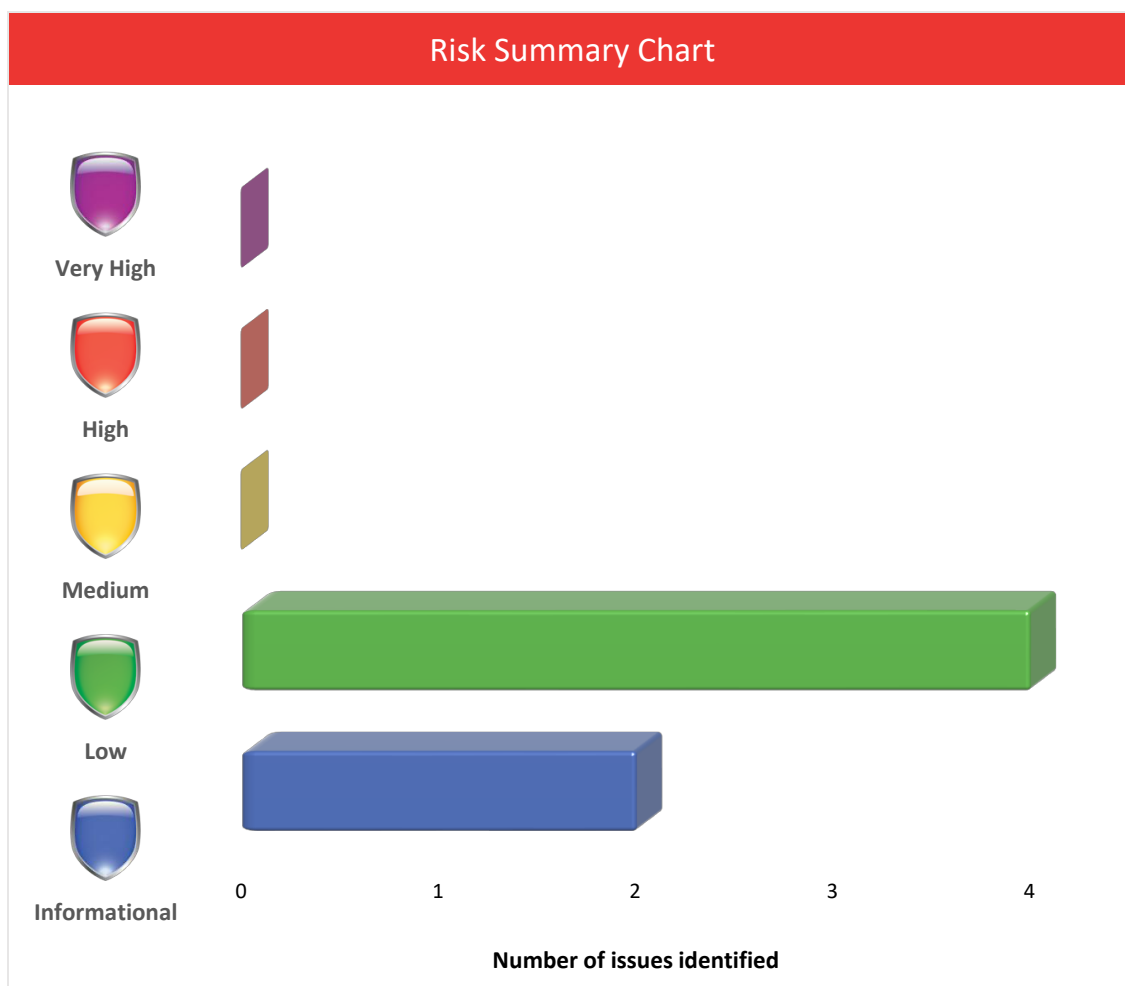

Of the six vulnerabilities identified, none were rated as high risk.

Figure 1.   *Security posture relative to peers*

The yellow ball on the above bell curve shows where Xref aligns relative to their peers for this testing. This is based on performing 1000's of penetration tests, comparing similar applications, comparing similar industries, and comparing similar sized IT departments.

The results of this penetration test are considered above average. There should be minimal risk to the business in exposing this application to the Internet.

3   Scope

Red Cursor was engaged by Xref to perform web application penetration testing against their Xref Enterprise applications. The environment used for testing was the sandbox environment.

Red Cursor performed both authenticated and unauthenticated testing against the applications which are located at the following domains:

- app.sandbox.xref.com
- api.sandbox.xref.io
- login.sandbox.xref.com
- id.sandbox.xref.io
- signup.sandbox.xref.io
- auth.sandbox.xref.io
- a.sandbox.xref.com
- a.sandbox.xref.io
- m.sandbox.xref.com
- m.sandbox.xref.io
- survey.xref.io
- pulse.sandbox.xref.com
- pulse.sandbox.xref.io
- shared.sandbox.xref.com
- comms.sandbox.xref.io
- webhook.sandbox.xref.io
- webhook-proxy.xref.io
- report.sandbox.xref.io

The following accounts were used during testing:

- pentester1@redcursor.com.au
- john2@redcursor.com.au
- pentester2@redcursor.com.au

Testing was performed from the 17th of March, 2025 to the 24th of March, 2025.

Retesting was performed 9th of September 2025.
