

Quick start guide: Onsite

Follow these steps to get started onsite with your geofencing projects.
Scan the QR codes for more detailed tutorials.

1

Assign devices to your project/site

Assign in Wearable mode for personal alerting or Asset mode for geotagging.

1. Head to the "Devices" tab in your project to view your device management page. Click "Assign device"
2. Scan the QR code or enter the device ID, from the back of each device

2

Start/stop your site

1. Head to your project's overview page on the Dashboard
 2. Click "Start/stop sites"
 3. From here you can start, stop and restart sites
- Please note sites must be active before you turn on your Tended device

3

Turn on and attach devices

1. Turn on all devices
 - Check for 3 green lights if you're in a safe zone
 - Or, check for a blue fading light if you're not in a safe zone
2. Provide attachments and devices to workers
3. Check for 3 green lights before the shift starts

4

Safety briefing and accuracy check

1. Carry out your usual safety briefing, including geofencing information
2. Demonstrate the accuracy and alert of your device(s) by safely moving the device over the safe zone boundary

5

Alerts and monitoring

1. Monitor the use of devices throughout the shift
2. Devices will alert when exiting a safe zone
3. Learn more about the alerts by scanning this QR code
