# Digital Performance Hubs

project audio visual

# What are Digital Performance Hubs?

For all businesses, programmes or projects, a clear line of sight between objectives and KPIs is essential - as well as robust performance planning and review routines that foster high-performance collaboration.

Digital Performance Hubs are fully connected collaboration environments designed to replace traditional control rooms. They combine audio, visual and interactive technologies in a multi-functional collaboration space that adapts to the way construction teams actually work.

## Why?

- Connect distributed teams in real-time
- Instant access to live data
- Streamline workflows and reduce costs
- Programme certainty & productivity
- Enhanced collaboration and development

# From Manual to Digital

## Manual

- Must be in the room to contribute
- Plans updated manually
- No automatic data capture
- Information printed off

## Digital

- Join from anywhere
- Live data updates
- Digital collaborative planning
- Consistent ways of working across teams

# Key Benefits of Digital Performance Hubs

On demand – Connect from site, office or home. Whether on a laptop, tablet, or phone, you can access the same integrated room experience from anywhere to drive consistency across teams and businesses.

**Real-Time Performance Tracking** – Measure progress at team, project, and enterprise level. Spot bottlenecks early and take corrective action immediately.

**Data-Driven Insights** – Analyse trends across projects to uncover systemic challenges and continuously improve.

**Faster Decisions** – Live dashboards and instant content sharing mean issues are identified and resolved quickly, keeping projects on track.

**Enterprise-Grade Security** – Protect sensitive project information with advanced encryption and access controls.

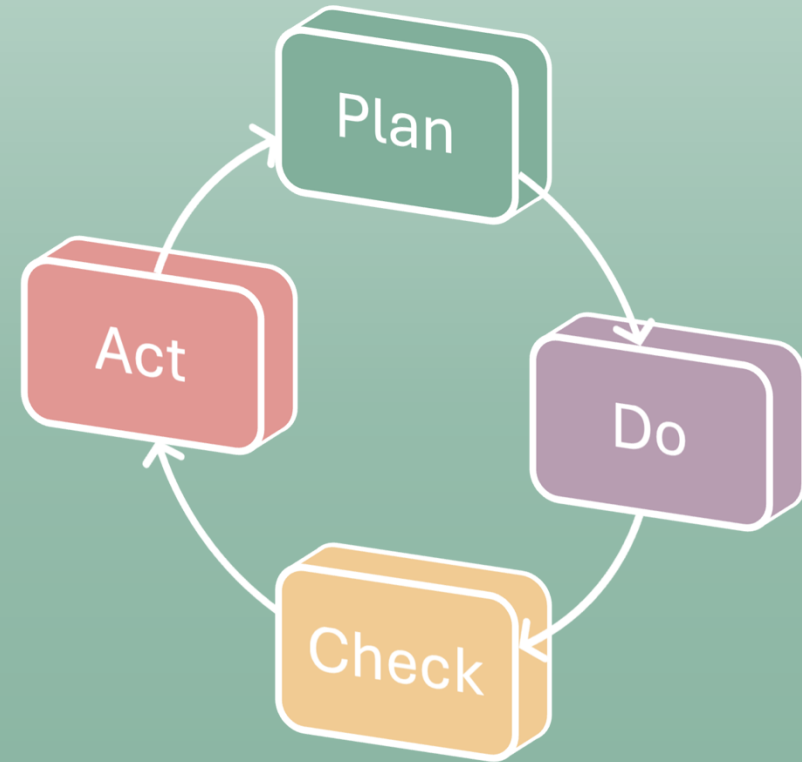

# Embedding the Improvement Cycle - Daily, Weekly and Monthly

With our immersive interactive configurations, you can Plan, Do, Check, Act (PDCA) everything that's crucial to the team using the space, from 3D BIM models to construction schedules and performance dashboards.

Teams can work collaboratively to explore designs, walk through programmes and see metrics side by side - even while working remotely.

With modular configurations, Digital Performance Hubs work for any space, from on-site to head office and everywhere in between. This is your next-gen command centre for smarter, faster decision-making.

# Where might you use Digital Performance Hubs

Digital Performance Hubs have been designed to facilitate the key functions of businesses, programmes and project delivery, and to support every stage of the construction project lifecycle.

## **Business Performance Reviews for Exec's and Leadership Teams:**

- Use dashboards for at-a-glance performance insights
- Manage action plans and track delivery against targets
- Review strategic plans and align teams to key milestones

## **Project Performance:**

- Project performance reviews across multiple sites in real time
- Digital collaborative planning and performance reviews
- Foster accountability with transparent, accessible data

## **Collaboration Workspace:**

- Host interactive collaboration sessions with standard ways of working
- Combine in-room and remote participation for maximum inclusivity

## **Design & Supply Chain Integration:**

- Design view and annotate BIM models collaboratively
- Connect to your common data environment for live updates
- Integrate supplier schedules and logistics into project planning

By enabling all stakeholders to access the same live data wherever they are you ensure everyone is working from a single source of truth.

# Scalable, Future-Ready Digital Performance Hubs

Our Digital Performance Hubs are available in flexible, modular configurations to suit any project size, ensuring seamless integration into your workspace. Whether you need a compact setup or a fully customised environment, we deliver the right solution for your needs.

## People

Our training combines guided onboarding with live demonstrations, so teams quickly master interactive displays, collaboration tools, and data tracking features. With intuitive, user-friendly design that mirrors familiar workflows, and dedicated coaching from the BBI team, adoption is seamless.

Ongoing support through help desks, user guides, and refresher sessions ensures teams stay confident and efficient, while BBI's focus on ease of use, embedding behaviours, and continuous improvement helps equip your teams with the confidence to leverage these powerful collaboration spaces from day one.

# Process

## Discovery

Understand your workflows, pain points, and space

## Design

Tailored room configuration and technology plan

## Delivery

Installation, testing, and training

## Adoption

Guided onboarding and specialist support to embed new behaviours

## Ongoing support

Proactive maintenance and help desk access

# Why BBI and PAV

## **BBI Services – The Construction Collaboration Experts**

BBI brings decades of experience in business and continuous improvement, team performance and construction project delivery. We understand the culture and daily realities of construction projects and supply chains, and we know that technology is most effective when it's integrated into proven ways of working with specialist support. Our approach ensures that Digital Performance Hubs aren't just installed, they're embedded into your routines, driving measurable efficiency gains from day one.

## **Project Audio Visual – The Digital Collaboration Specialists**

PAV is a leader in transforming analogue workspaces into intelligent, connected hubs. With over 6,500 Microsoft Teams Rooms delivered and decades of experience with interactive display technologies, we deliver solutions that connect people, data and processes seamlessly. We ensure your technology is future-ready, scalable and fully supported, whether you operate in one location or across multiple sites globally.

## **Business Performance Reviews for Exec's and Leadership Teams:**

Together, BBI and PAV combine construction know-how with cutting-edge technology integration. The result is a solution that works for your people, fits your workflows and grows with your business, giving you a practical, accessible and high-impact way to drive project performance and delivery.
