

## RAKUTEN SITE MANAGEMENT FOR DATA CENTERS

The Single Source of Truth for Global Data Center Operations

### The Vision

Building and scaling data centers is a high-stakes race where every day of delay defers revenue and every stranded kilowatt represents wasted capital. Yet, most operators are held back by fragmented tools and manual workflows that create a "blind spot" between design, deployment, and live operations.

**Rakuten Site Management for Data Centers** eliminates that gap. By providing a Unified Digital Twin that synchronizes physical infrastructure with real-time operational intelligence, we ensure every rack, circuit, and connection is validated and deployment-ready. We help you monetize capacity faster, operate with total insight, and scale your infrastructure with absolute confidence.

### The Impact

20%

Faster Go-Live

20%

Savings in Energy & Capacity

15%

Fewer Network Outages

100%

Asset Transparency

Zero Stranded Capacity

Proven Hyperscale Reliability

### The Platform

Precision Deployment & Commissioning

End-to-end Infrastructure Governance

Unified Digital Twin

Predictive Maintenance & Ops

Dynamic Expansion Planning
