

# SQUID SYNC

## Seamless Sync Between Genetec and Third-Party Systems

SquidSync is an application created to automate the synchronization between Genetec Systems to a third-party platform in a secure manner. SquidSync is an application that gives end users control over which data is transferred between the two systems.

### Features

#### Eliminate Manual Transfers

Automate the synchronization between Genetec Systems to third-party cloud platforms—no more downloading and re-uploading.

#### Save Time and Reduce Errors

Minimize human error and free up team resources by eliminating repetitive and time-consuming tasks.

#### Secure and Compliant Transfers

Maintain data integrity, secure transport and auditable log files in order to track movements to approved destinations.

#### Seamless User Experience

Initiate or automate secure transfers directly from within Genetec Systems or third-party systems.

#### Flexible Deployment

Deploy SquidSync as a Cloud-Hosted or On-premise solution to meet your IT and compliance requirements.

#### Accelerate Investigations

Flag a case in Genetec and SquidSync automatically delivers the related files to your cloud destination, eliminating manual downloads and re-uploads.\*

\*Features vary by integration and use case and may require a Genetec Clearance license.

# Deployment

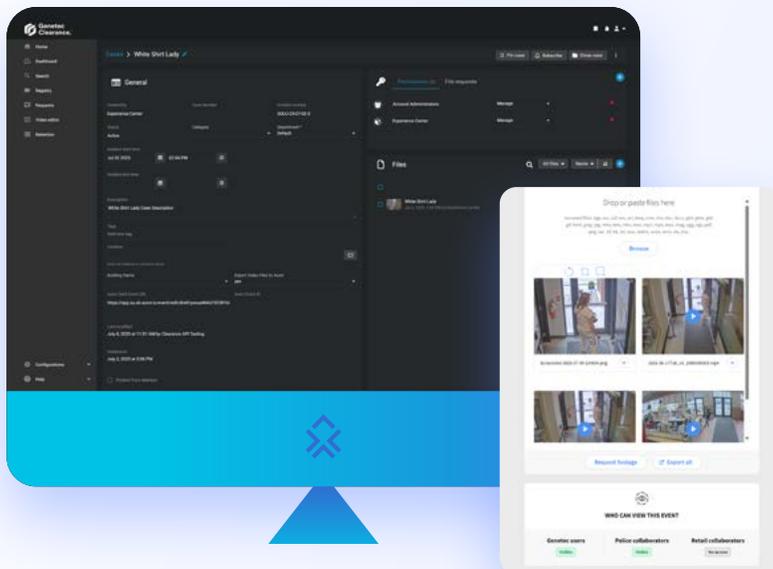

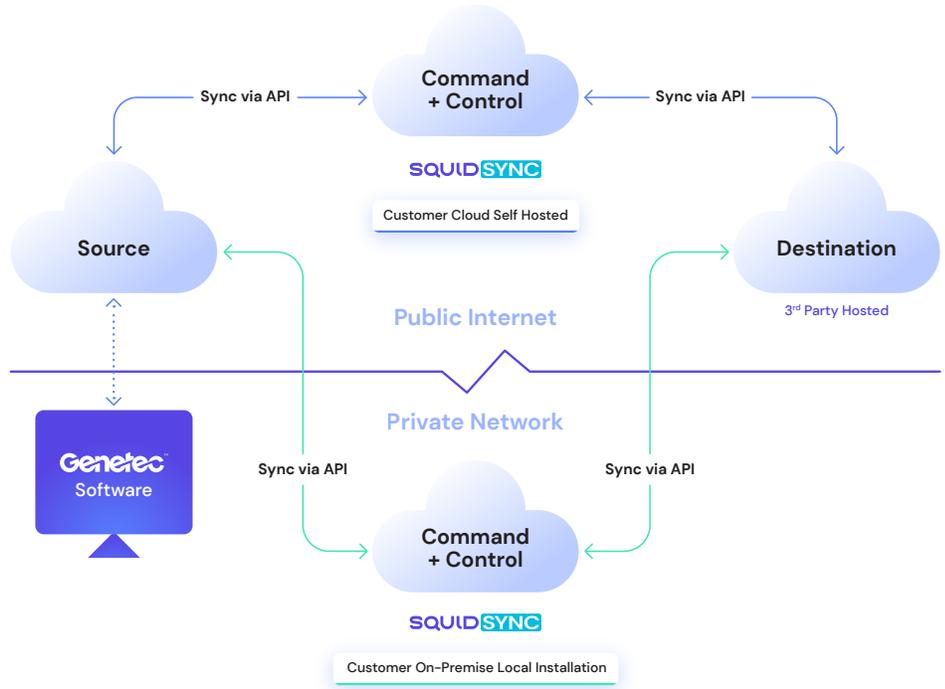

Deploying SquidSync is quick and easy. We will work with you every step of the way to ensure a successful deployment with optimal performance, whether self-hosted or on-premise.

## CLOUD DEPLOYMENT

- ✓ Azure
- ✓ AWS
- ✓ Google Cloud

## ON-PREMISE DEPLOYMENT

- ✓ Linux Server
- ✓ Windows Server
- ✓ Supports Containerization

## Available Integrations

- ➕ **HR Management Systems**  
e.g. Workday
- ➕ **Retail Crime Intelligence Platforms**  
e.g. Auror
- ➕ **DEMS (Digital Evidence Management Systems)**  
e.g. Evidence.com, Clearance
- ➕ **SQL Database**
- ➕ **Other Systems**  
(with available APIs)
