

4 - 7 MARCH 2026

ULTIMATE COMPOSITE MASTERCLASS

with Dr Didier Dietschi

Join Tony Rotondo and Michael Mandikos as they host Dr Didier Dietschi for these in-depth programs on anterior aesthetics and managing tooth wear, with composites.

Back in
Australia

WED 4th and THURS 5th MARCH 2 DAY ULTIMATE ANTERIOR WORKSHOP

Anterior bio-aesthetics: Better, faster, simpler

Direct Bonding in the smile frame: what has truly changed to improve esthetic treatment outcome, reliability and simplicity.

FRI 6th and SAT 7th MARCH INTERCEPTIVE TREATMENT OF TOOTH WEAR

The breakthrough in managing tooth wear pathologies

Modern management and treatment of tooth wear in the era of minimally invasive dentistry

REGISTRATION FEES

2 DAY LECTURE & WORKSHOP ANTERIOR AESTHETICS

Wed 4th - Thurs 5th March \$ 3,980 + gst

2 DAY LECTURE & WORKSHOP TOOTHWEAR

Fri 6th - Sat 7th March \$ 3,980 + gst

BUNDLE - BOTH COURSES - 4 DAYS

Wed 4th - Sat 7th March \$ 6,950 + gst

LOCATION

Australian Dental Centre of Excellence
158 Ipswich Road, Woolloongabba,
Brisbane

2 Comprehensive Programs On Offer

2 DAY ULTIMATE ANTERIOR WORKSHOP

WEDNESDAY 4th and THURSDAY 5th MARCH 2026

Classical indications of composite resins in the smile frame are well established, along with many trendy cosmetic applications. Less is taught about the potential of modern composite technology and techniques for a broad range of moderate to complex clinical situations such as post-orthodontic smile enhancements, simple and poly- chromatic veneers, and even the aesthetic and functional rehabilitation of eroded, and discoloured anterior teeth.

This program will overview the most recent clinical progresses of direct composite application and relevant clinical protocols.

Learning objectives

- Modern indications of free-hand bonding
- New digital aesthetic diagnosis applied to free-hand bonding
- Shading & layering concepts
- Polychromatic restorations & effect shades
- Simple finishing and polishing techniques

INTERCEPTIVE TREATMENT OF TOOTH WEAR

FRIDAY 6th and SATURDAY 7th MARCH 2026

Recent studies show a significant increase in tooth wear prevalence in all age groups but especially in young individuals. It has thus become increasingly important to diagnose early signs of abnormal wear so that proper preventive, and if needed, interceptive-restorative measures are taken. Tooth Wear has biological, functional and aesthetic consequences which motivates patients to seek treatment, and clinicians must be able to offer conservative options.

This course will teach that treatment involves a comprehensive evaluation, leading to two intervention strategies, namely interceptive or restorative-prosthetic. Prevention is key, and controlling risk factors is a pre-requisite of a successful long term outcome.

Learning objectives:

- Wear diagnosis and prognosis
- Full mouth rehabilitation
- Management of the vertical dimension of occlusion
- Interceptive protocols for anterior & posterior worn teeth

ABOUT THE SPEAKER

Didier is one of those rare individuals who have academic brilliance as well as clinical mastery of their subject. He has written several texts on composites and adhesive dentistry, as well as over 200 articles.

Don't miss this opportunity to hear his in depth lectures, work "one on one" and watch his techniques and learn his skills in a smaller group environment.

Dr's Rotondo and Mandikos will assist in the workshops to ensure all attendees have the maximum contact with their instructors.

Anyone who aspires to produce high quality aesthetics and function in composite dentistry knows of Didier or has trained with him. You too can join this esteemed group.

Michael Mandikos
