(Optional) CWDM Component Specifications

Topvision CC8800 series DAA and R-OLT Node support CWDM components.

CWDM multiplexes the optical signals of different wavelengths to a single optical fiber for transmission by using optical multiplexer. At the receiving end, the optical de-multiplexer is used to decompose the hybrid signal in the optical fiber into signal of different wavelengths, and is connected to corresponding receiving devices. CWDM is a low-cost WDM transmission technology.

The CWDM scheme supported by CC8800-Hybrid includes the following:
