

Evidentli announced today it is joining the [Coalition for Health AI \(CHAI\)](#), an industry-led coalition committed to developing industry best practices and frameworks to further innovation, safety and security for health AI.

"We're thrilled to join the Coalition for Health AI as we share a fundamental commitment to responsible AI development and deployment in healthcare," said Dr. Guy Tsafnat, Evidentli's co-founder and Chief Scientific Officer. "Our Piano platform directly addresses the critical challenges CHAI aims to solve, by generating AI-ready harmonized data sets, transformed from messy, fragmented real-world healthcare data using open standards like OMOP and FHIR. At Evidentli, we understand that effective and trustworthy AI in healthcare depends on high-quality, standardized data with complete provenance tracking for transparency and accountability, so our technology maintains the full data lineage. We look forward to collaborating with CHAI's member organizations to advance best practices that ensure AI serves all communities safely and effectively."

Evidentli's Piano platform harmonizes Real-World Data at scale to enable AI tool development, testing and deployment, which enables CHAI's mission of "AI that serves all of us" and ensures healthcare AI tools and algorithms are ethical, FAIR, transparent, and medically sound across all clinical applications.

Evidentli's evidence synthesis capabilities provide a comprehensive solution for CHAI's community's most challenging healthcare AI design, deployment and oversight requirements. By grounding AI development and validation in transparent, auditable, and clinical data from federated networks, Evidentli supports the operational delivery of CHAI's mission to ensure AI algorithms are founded on evidence-based healthcare.

"I am thrilled to welcome Evidentli to our growing community of organizations committed to advancing effective and responsible health AI," said Brian Anderson, CHAI's CEO. "We are driven by the engagement and expertise of our members and the feedback of our broader health ecosystem and the public. We look forward to working together to unlock the potential benefits of AI, on a foundation of trust, safety, and security."

As a coalition bringing together leaders and experts across the community of health systems, patient advocates, researchers, professional associations, start-ups and established technology providers, CHAI has established working groups focusing on privacy and security, transparency, usefulness, and safety of AI algorithms. CHAI recently established its first Model Card registry to support the rapid growth of model cards, or 'nutrition labels' for health AI, used to simplify procurement among health systems and solution providers.

CHAI was started by clinicians. Its mission is to build the broadest possible consensus across the health ecosystem to help ensure health AI is trusted, secure and safe. The CHAI membership is open and rapidly expanding. Today it includes nearly 3000 organizations including health systems, patient advocacy groups, academia, and a wide range of industry start-ups and incumbents. CHAI is committed to convening and dialogue to achieve consensus. There are no limits to who can join and participate. Learn more about a CHAI membership [here](#).

About Evidentli

Evidentli's mission is to empower the world's communities to advance healthcare through data, by translating the previously incomprehensible and bringing together the historically fragmented.

Fragmented, messy data is the fundamental barrier to evidence creation and healthcare transformation. Healthcare data needs to be aggregated, cleansed and standardised to be made useful - a traditionally time consuming, resource intensive process. This is a complex and nuanced problem that doesn't have an easy solution. That's why Evidentli has dedicated decades of pioneering research and development to solve this fundamental issue, and have created a solution that intelligently and rapidly automates the production of medical evidence to power healthcare's digital transformation.

Our team are recognised global leaders in digital health. We bring deep domain expertise in health informatics, artificial intelligence and evidence-based medicine, and a passion to unlock the vast potential that exists within the health system.

About CHAI

The CHAI (Coalition for Health AI) mission is to be the trusted source of guidelines for Responsible AI in Health. It aims to ensure high-quality care, foster trust among users, and meet the growing healthcare needs. As a coalition bringing together leaders and experts representing health systems, startups, government and patient advocates, CHAI has

established working groups focusing on privacy and security, fairness, transparency, usefulness, and safety of AI algorithms.
