

HTM partners with Moove for next-generation helicopter booking engine

This collaboration supports HTM's expansion into VIP charter and introduces instant booking engine

Munich, 12th January 2026 – HTM, leading German helicopter operator, announces a strategic collaboration with Moove, the aviation technology start-up, to deploy a dedicated digital booking and scheduling platform across its helicopter operations.

This initiative supports HTM's expansion into VIP charter services while strengthening its existing helicopter activities with a technology specifically designed for high-frequency rotorcraft flights, such as instant booking capabilities.

“In helicopter operations, offering a seamless booking experience widen market footprint” said Jakob Meyer-Bender, Director Business Development at HTM. *“With Moove, we are able to sell flights in one click while digitizing flight execution, giving our team a clear operational picture and seamless interaction with demanding clients”*

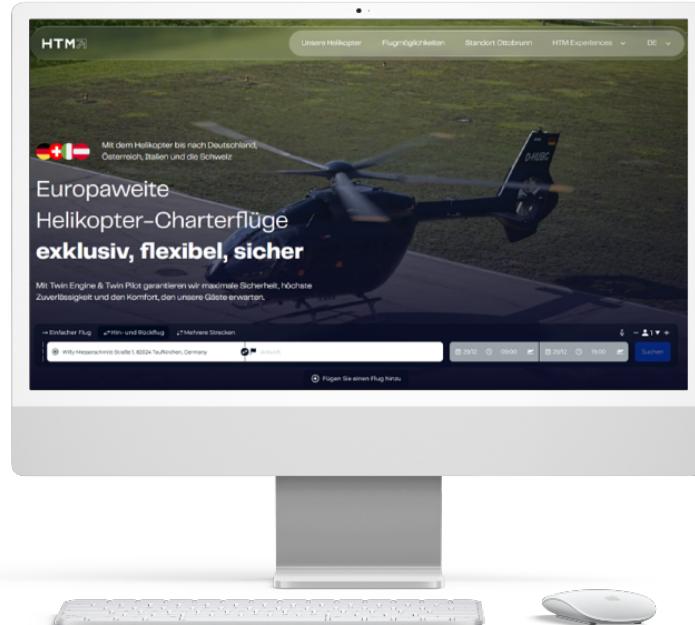

HTM operates a full-Airbus fleet composed of modern H145, EC135 & AS350 for Offshore & Onshore © Helicopter Travel Munich

A technology tailored to helicopter mission profiles & sales dynamics

Across Germany, Europe & Switzerland, HTM Helicopter operations require constant adaptability, with last-minute flight requests and short turnaround times. HTM will integrate, into its newly designed website, branded booking interfaces with door-to-door simulation and centralize passenger management thanks to its customer portal.

HTM will leverage Moove's platform to support its growing range of operations, including point-to-point corporate travel or shuttle flights for major national and international events such as Formula 1 Grand Prix weekends.

“Helicopter operates under very different constraints from fixed-wing aviation, where booking & distribution digitization is a major game changer”, said Arthur Ingles, CEO and Co-Founder of Moove. *“We are proud to push forward innovation together”*.

HTM launches a new website dedicated to charter & event flights, embedding Moove technological bricks such as its search engine

Optimizing door-to-door air mobility, from booking to boarding

The platform supports HTM's sales & operational teams by enabling optimized rotation planning across multiple rotorcraft, accounting for aircraft availability, flight duration, positioning flights and crew coordination. By supporting both charter and seat-based flight logic, the system allows to pool compatible passengers, improving rotorcraft utilization.

“Our software focuses also on streamlining operations” mentioned Antoine Awaida, CTO and Co-Founder of Moove. “For helicopter operators, it means faster trip creation, an improved rotation planning and better coordination between flight crews, dispatch and passengers”.

An end-to-end digital coordination for HTM's helicopter operations

From booking to boarding, Moove provides a fully digital passenger journey tailored to HTM's strict processes. By connecting booking, passenger data, and mission execution in a single system, HTM strengthens coordination across teams while maintaining the flexibility required in professional rotary-wing aviation.

HTM will present this new digital capability jointly with Moove at AERO Friedrichshafen, along its helicopter fleet on the aviation fair static display in April 2026.

About HTM – <https://htm.de/en>

Founded in 1997, the HTM Group is one of the leading helicopter service providers in Germany. Helicopter Travel Munich delivers comprehensive rotary-wing services across passenger transport, rescue and special missions, as well as maintenance, manufacturing, and aircraft and component development through its certified entities. With a strong focus on reliability, quality, and operational expertise, HTM operates modern helicopter fleets and supports demanding missions across Germany and neighboring regions.

About Moove – www.flymoove.com

Moove is a SaaS (Software-as-a-Service) provider delivering advanced booking and scheduling solutions for operators and charter brokers. It has created the first dual system for on-demand and by-the-seat operations, raising the bar for passenger experience and operational efficiency. Its mission: to build the flight distribution platform of the future. Offers for operators and travel agents are available at: www.flymoove.com/oprateurs
