

= Pulse

On Demand Services

Instant feedback. Smarter cleaning where and when it's needed.

Pulse

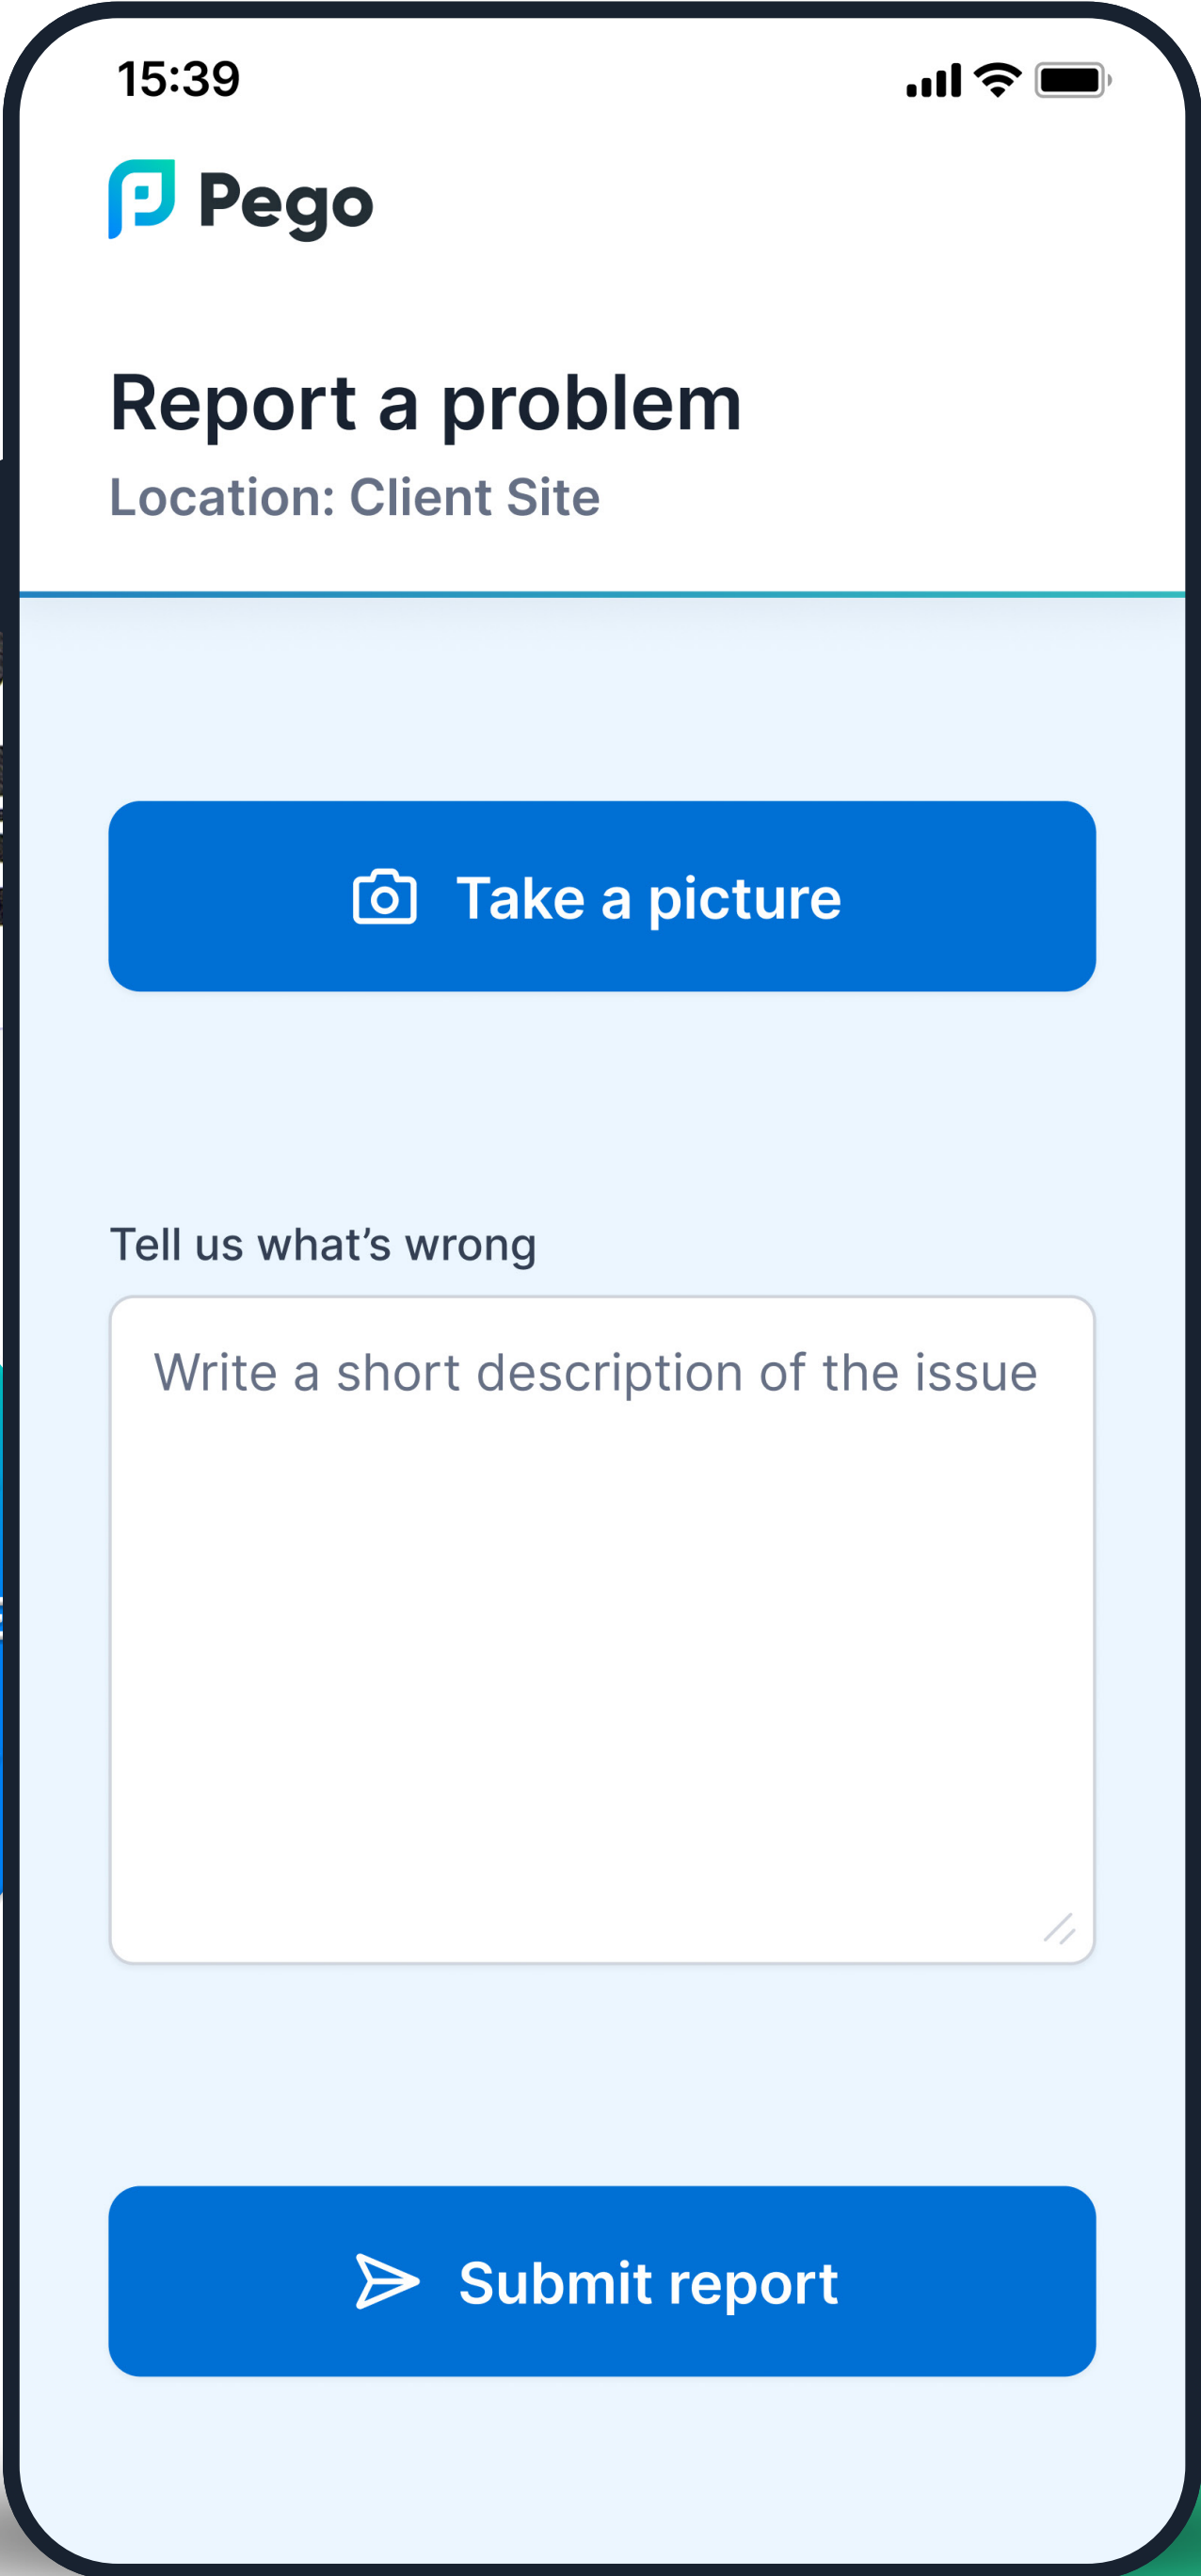

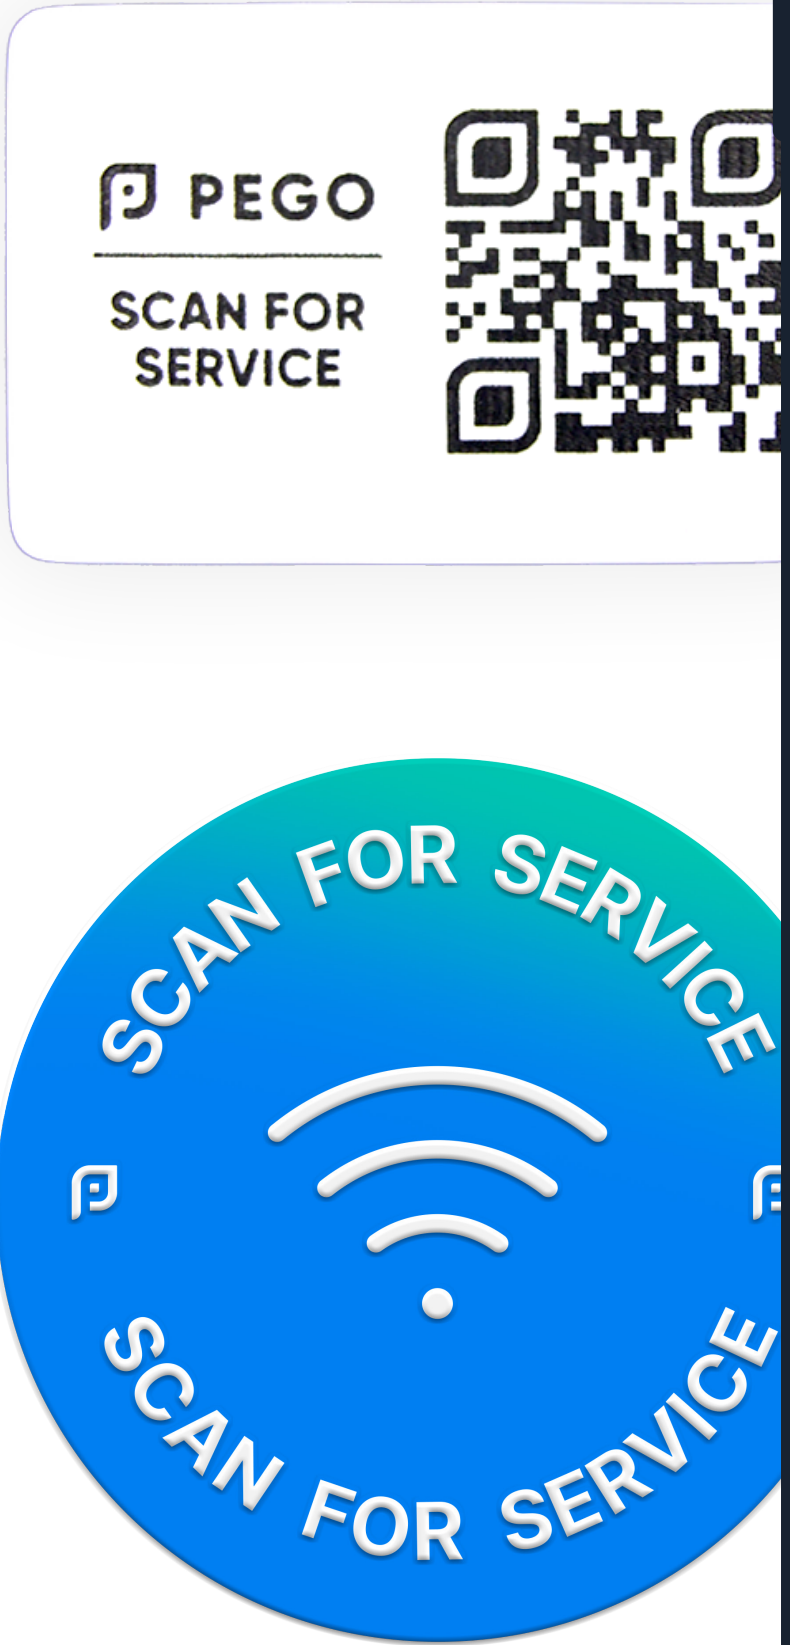

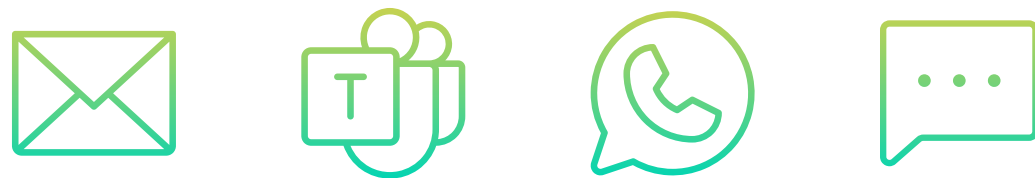

On Demand Services

Pulse enables demand-driven cleaning through low-cost feedback points that are easy to deploy.

Tasks and feedback can be submitted by building occupants scanning a feedback point (QR codes, NFC tags and/or wireless buttons) in a room, whilst managers can create tasks in real-time via the Pego dashboard. Operatives can also create tasks on the spot, using the Pego mobile app.

Tasks are automatically prioritised and merged into the live task list of the relevant operatives, with a push notification. This enables demand driven services, with teams being dynamically directed to the issues that matter the most.

Pulse can be integrated with third-party platforms such as IWMS room bookings, and messaging applications.

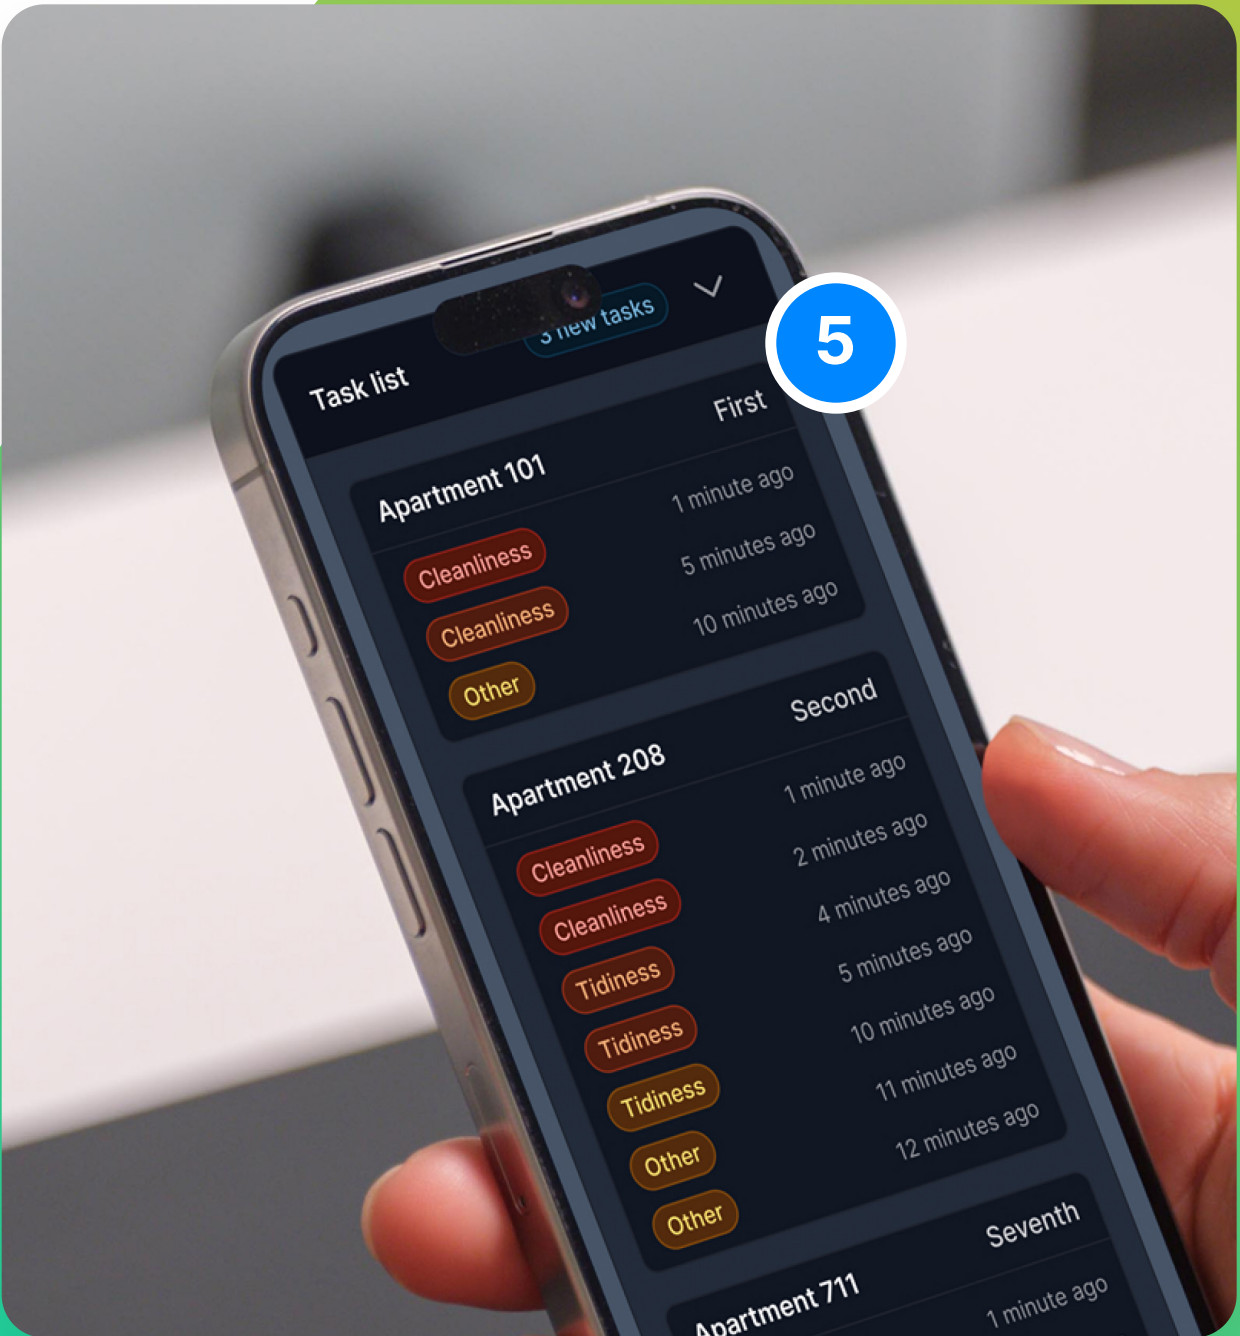

Pulse

Respond to feedback from everyone involved.

How it works

- 1. Pego installs simple feedback points (QR codes, NFC tags and/or wireless buttons) in the desired areas.
- 2. Anyone can use a Pego feedback point to send feedback or make a request.
- 3. Building managers can create instant tasks from the interactive building model.
- 4. Third-party feedback sources like FM mailboxes, messaging apps, and IWMS are also connected.
- 5. Pego’s AI organizes all the inputs and automatically converts them into live tasks that are pushed to operatives on the Pego mobile app.
- 6. If a human input (Pulse) task makes scheduled (Core) tasks redundant, the system automatically closes off the duplicated items, replacing input specified work with on demand services.

Empowering people with the tools to do better, with less.
