

The
PARAMETER[®] 3D
Cabinet X-ray System

Multislice radiography
for exceptional 3D
tomosynthesis imaging.

Fig. 1 shows 3D slices of a rodent

The PARAMETER[®] 3D imaging system provides superior resolution for **2D** and **3D** X-ray images using our patented tomosynthesis technology. The 3D tomosynthesis technology constructs **1 mm digital slices** of the sample by acquiring multiple projections at varying degrees. This enables the user to better analyze the structure and offers a clearer view.

Designed specifically for scientific research in small animals, this in vivo system is a versatile solution to many of your research needs. Other applications include agriculture, forensics, and non-destructive testing (NDT).

PARAMETER 3D Features:

- 2D and 3D X-ray imaging capabilities
- Integrated HD optical camera
- Robust software toolkit for image analysis
- Faster than μ CT
- Fully shielded and mobile system for easy transportation
- Compatible with DIGIMUS and DIGISEED analysis softwares.

The PARAMETER[®] 3D Cabinet X-ray System

We use the system for tracking de-calcification of our bone samples prior to histological processing; we use the X-ray features for that. We also use the system to track refilling of bone defects in the tibial defects model and femoral defects model.

KUBTEC's proprietary **Image Blender™** feature combines X-ray and optical images for a unique view of your region of interest.

Parameter 3D Specifications

Detector Size	5" x 6" (12 x 15 cm)
Tube Potential	20-50 kV
Exterior Size (W x D x H)	23" x 24" x 54" (58 x 61 x 137 cm)
Weight	300 lbs. (136 kg)
Available Software Packages	DIGICOM Image Acquisition and Analysis, DIGIMUS BMD/BMC and Body Composition; DIGISEED, Counting and Analysis.
