

The Fastest Way to Launch Partnership Ads at Scale

Building Partnership Ads has always been one of the most operationally heavy parts of a media buyer's plate. Unlike BAU creative, every Partnership Ad comes with its own set of variables:

Different content restrictions and tone for ad copy

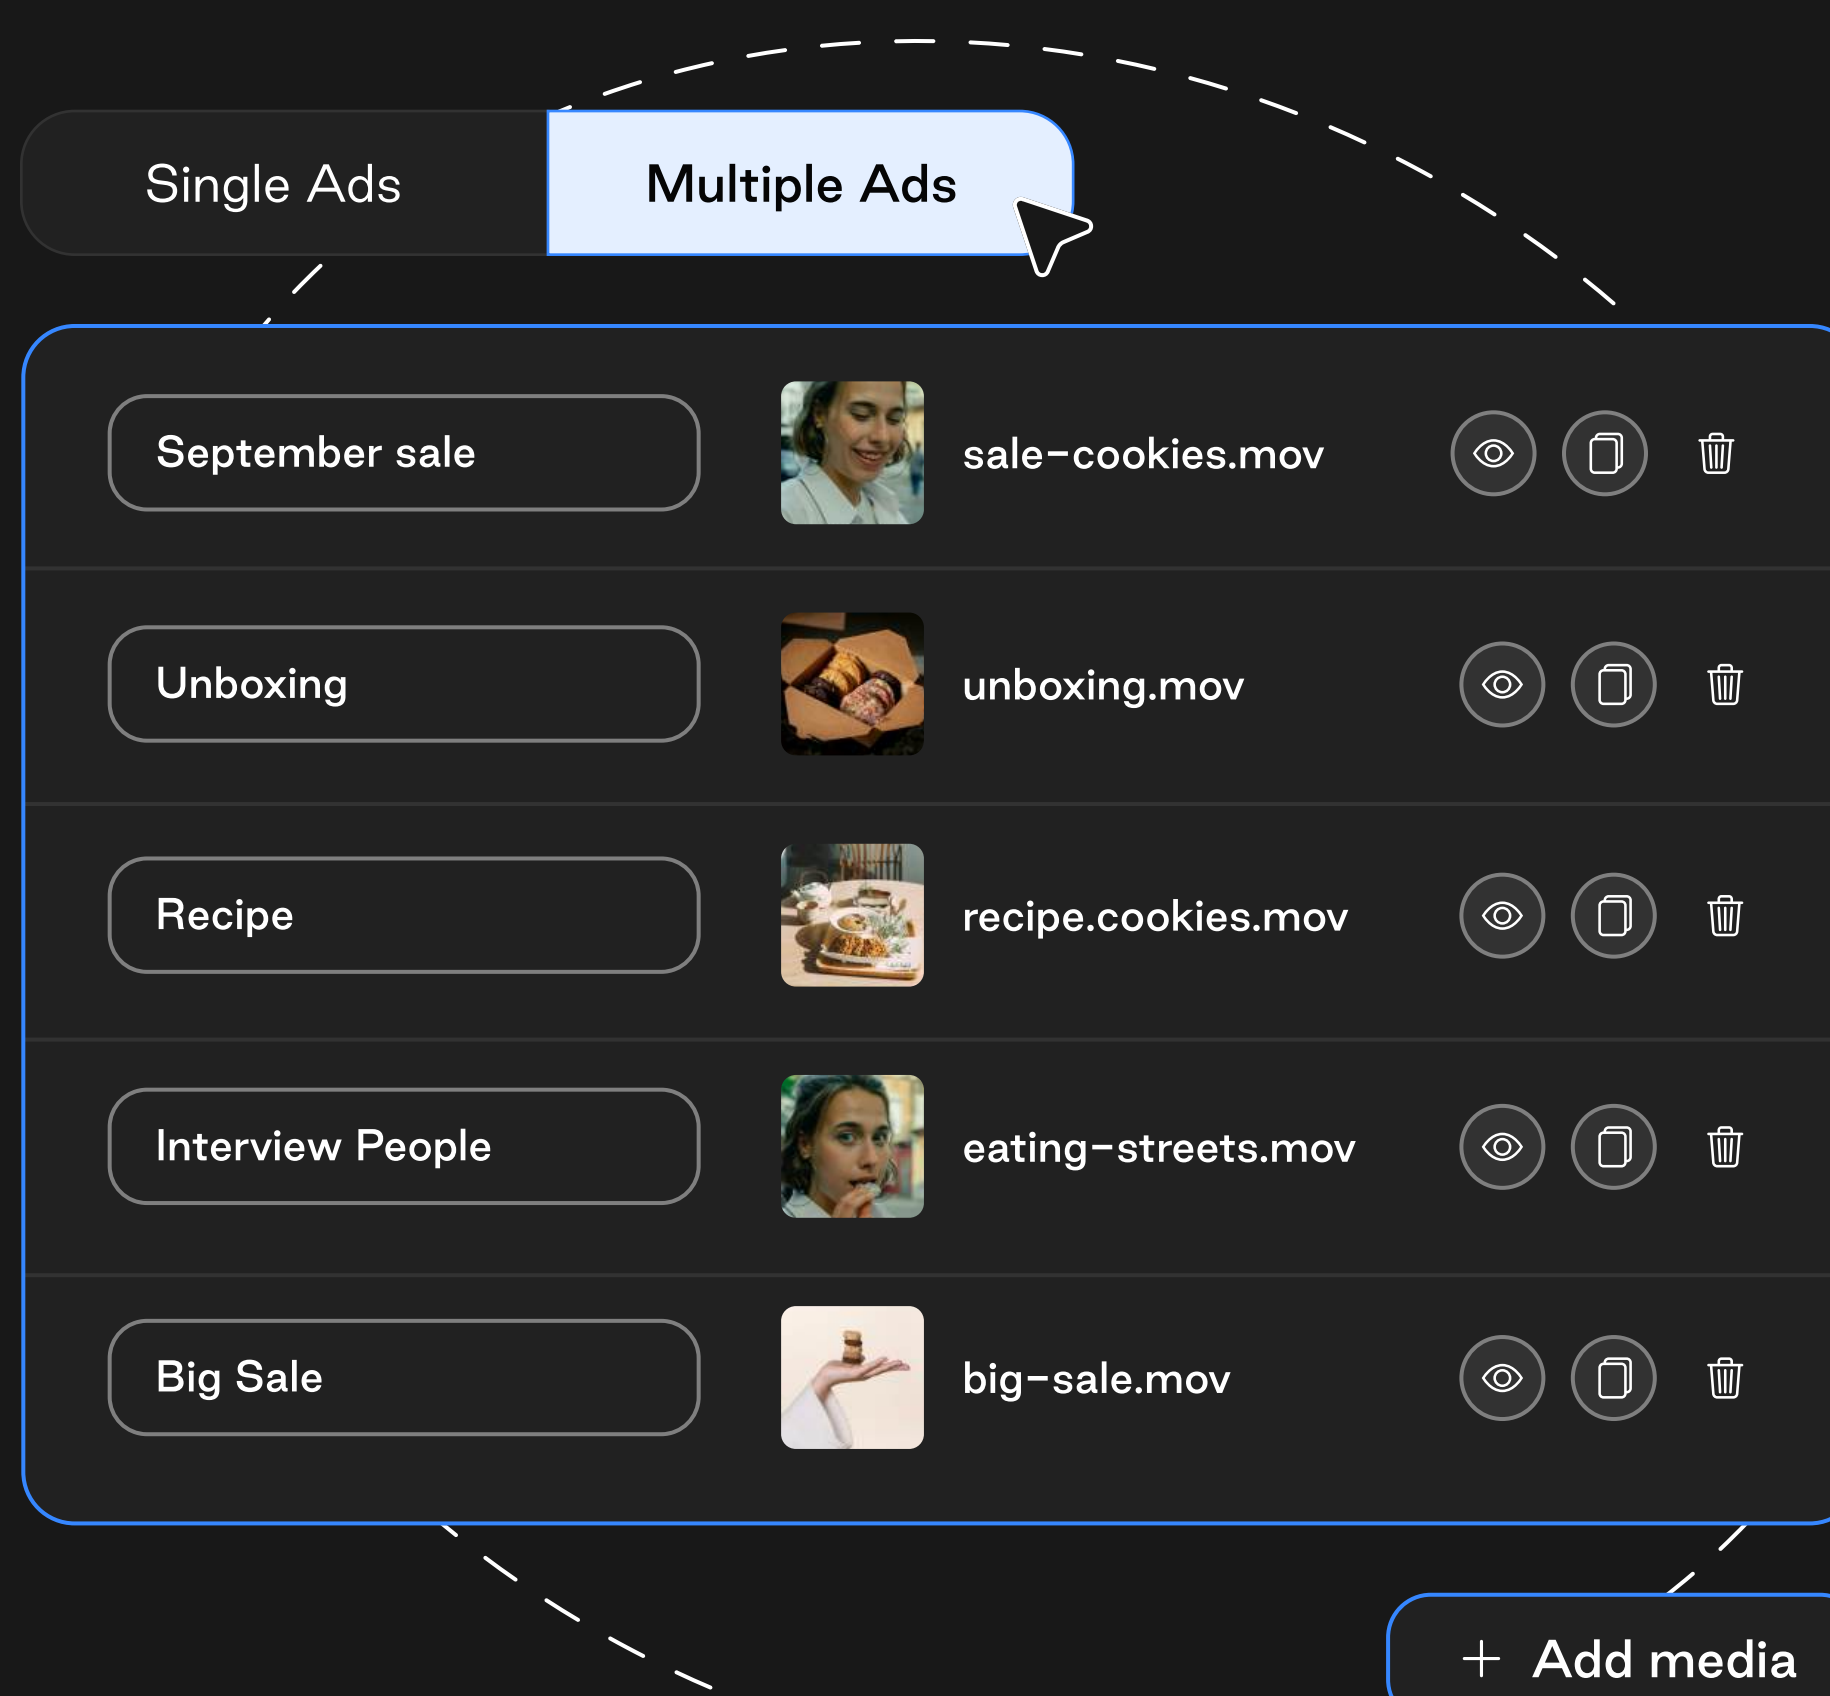

A different creator handle for each ad

Different permissioning statuses

Different usage rights windows

Running that process one ad at a time in Meta Ads Manager is slow, error-prone, and the single biggest reason creator content sits in a folder instead of live in your ad account.

With Superfiliate's bulk partnership ad builder, you can now **launch all of your Partnership Ads in one swing with a customizable table ad builder.**

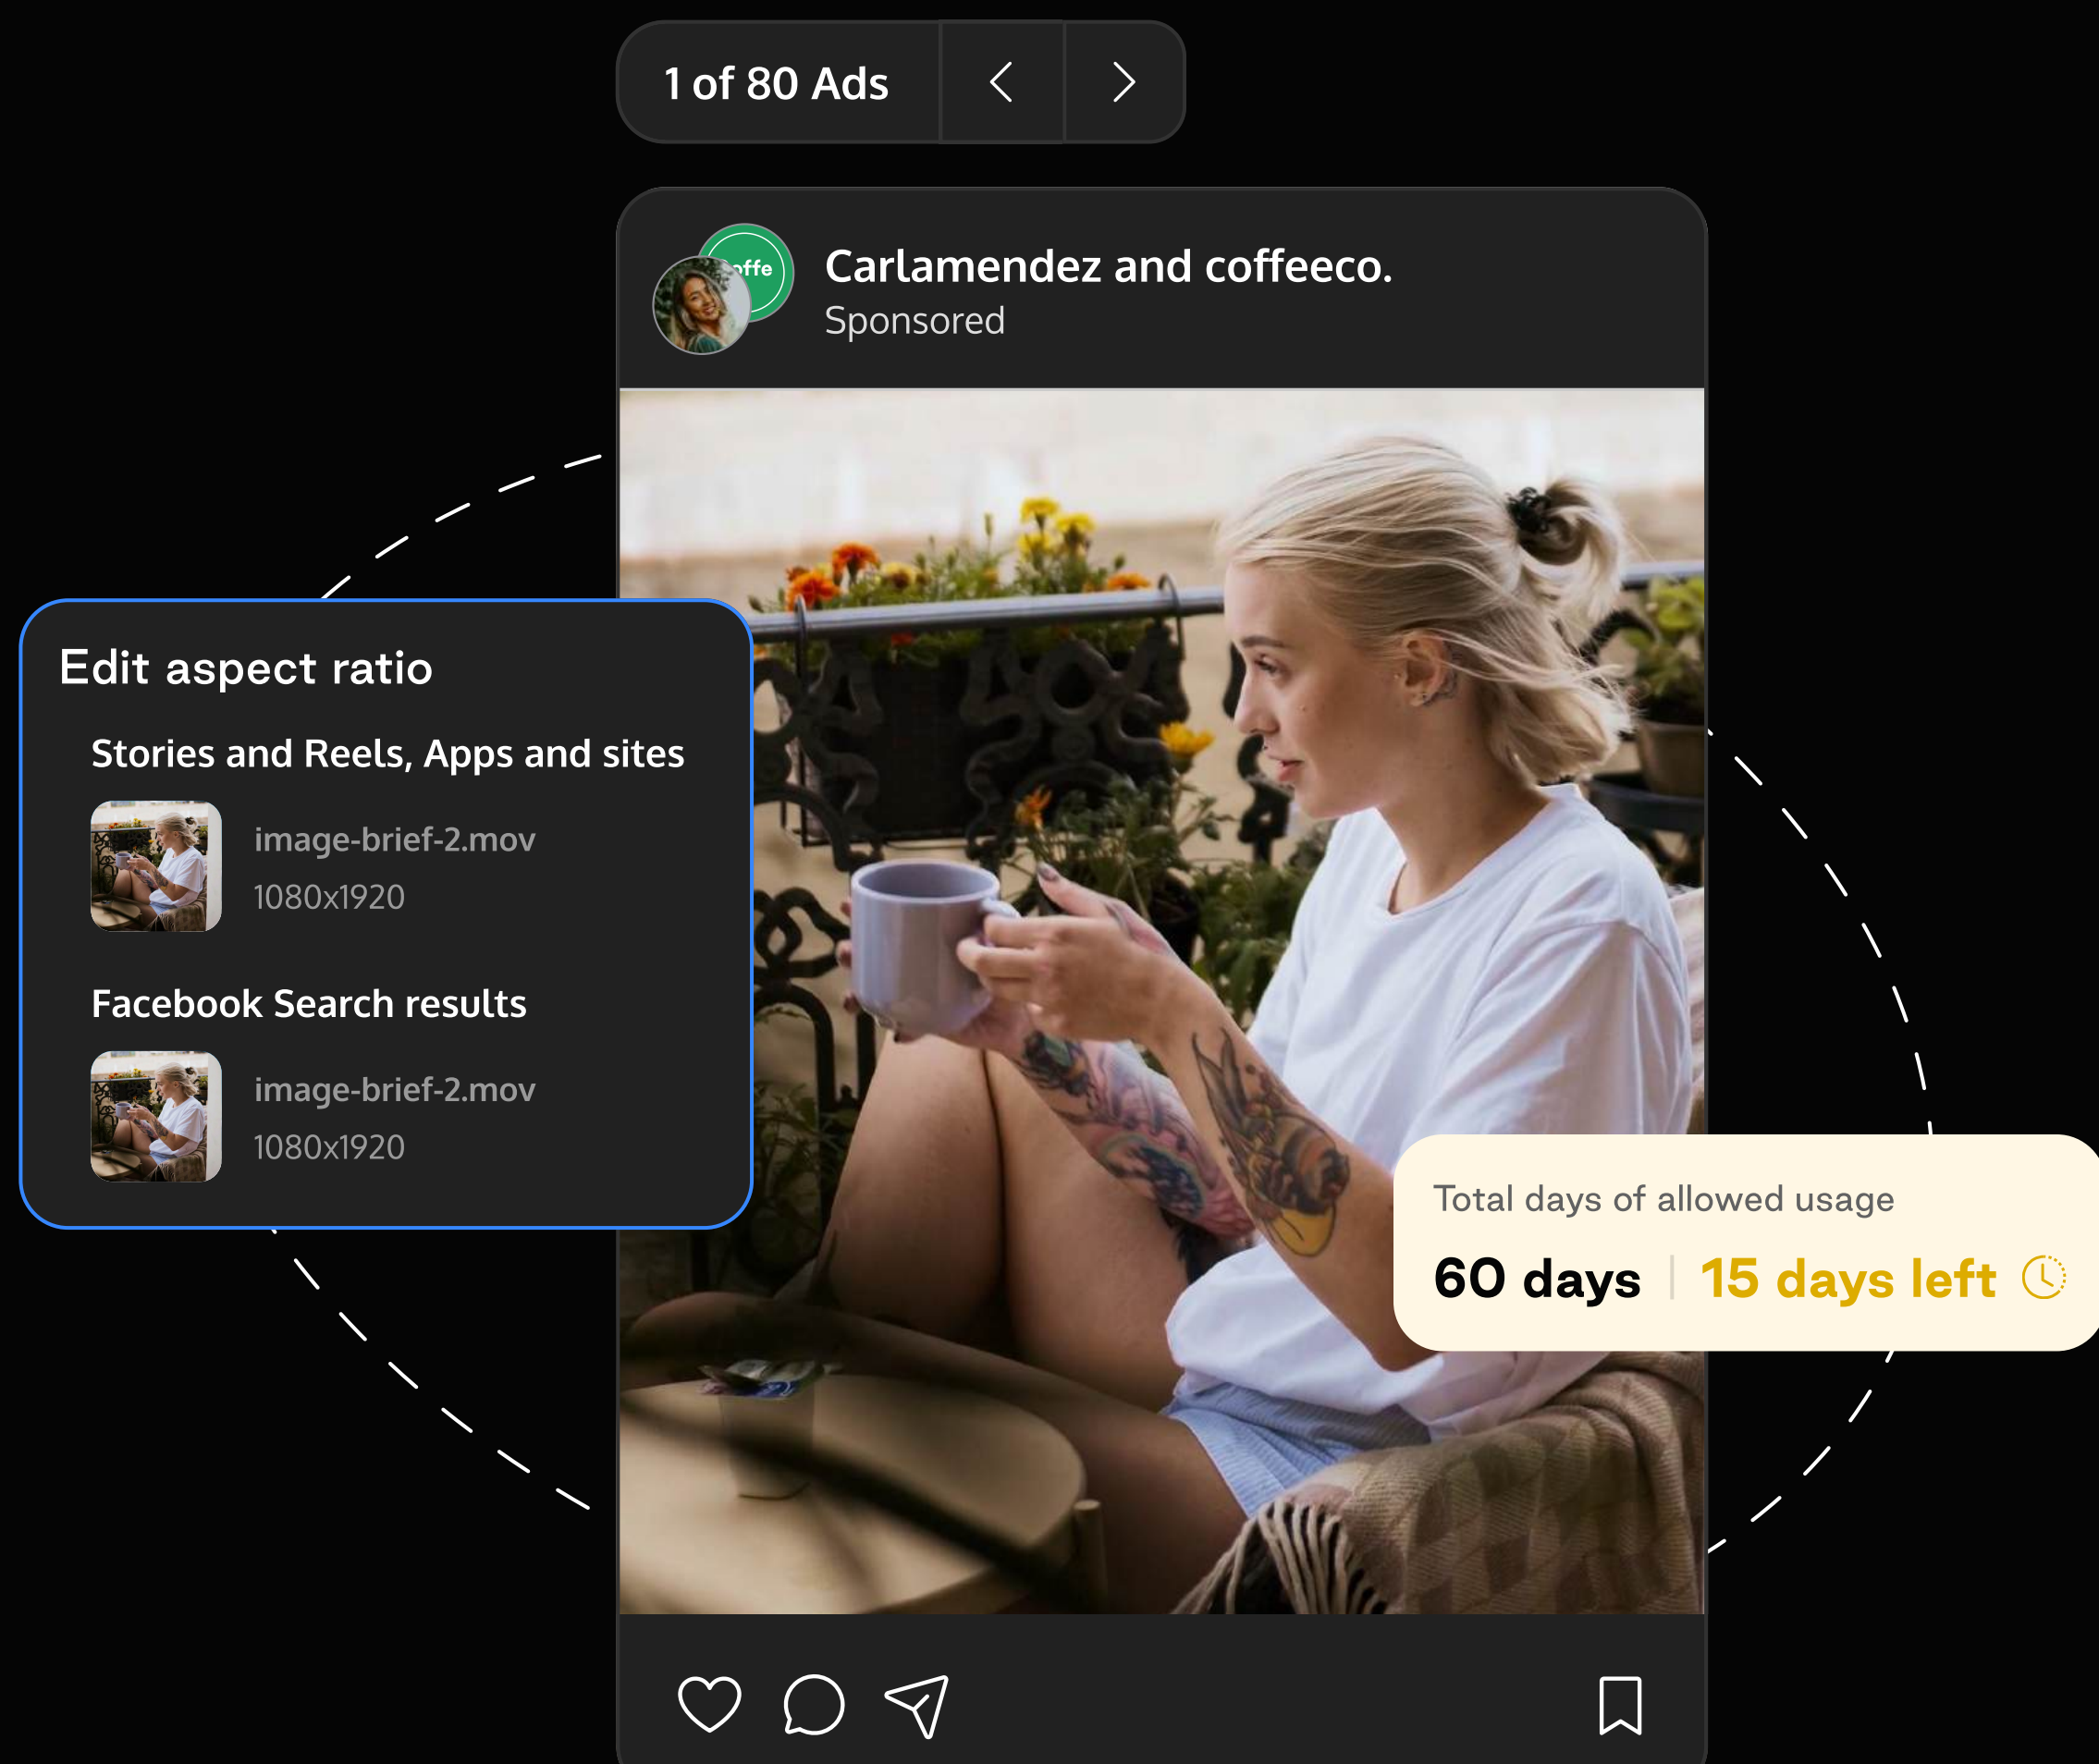

Bulk launch all of your ads into your existing campaign structures

Launch your Partnership Ads into your pre-existing campaign structure across all of your creator partners at once — no rebuilding, no re-entering settings for each asset, no switching between creators mid-workflow.

Optimize for different placements and aspect ratios

Partnership Ad creative comes in all shapes and sizes — a 9:16 Reel, a 4:5 feed post, a static image. Configure your placement and aspect ratio preferences across the entire batch so the right creative hits the right placement from the start.

The first bulk partnership ad builder

Most bulk ad building tools are built for BAU campaigns. They assume a small number of variables — a few primary text versions, one or two product pages or landing pages.

Partnership Ads are fundamentally different and every asset carries its own creator-specific language, usage rights window, and content restrictions. In the bulk ad builder, you can see every permissioned asset in a single view and rapidly generate the specific versions each one needs.

The result is a tighter loop between creator delivery and ad launch and allowing you to launch more ads, faster — fewer assets stalled in handoff, more creative in market, and a program that compounds faster with actionable, winning assets at scale.
