- Familiarity with version control systems like Git;
- Experience with responsive design and cross-browser compatibility;
- Knowledge of user experience (UX) design principles;
- Knowledge of user experience (UX) design principles.

About me:

Web developer and designer with extensive experience and a love for building interesting and useful digital experiences. I have extensive experience in front-end development including working with tools as Webflow, Figma, Adobe Photoshop. I have a solid grasp of how to combine design and technology to produce successful solutions.

I'm dedicated to providing top-notch work that satisfies the demands of my clients and their users, whether I'm working on a brand-new website construction or optimizing an already-existing one.

Work experience:

My career for many years was centered around various marketing positions. I have five years of experience as a team leader with Strong Future International.

By working in this role. I improved my communication and problem-solving abilities, as well as my understanding of human needs and sales.

I began my training and work in web design and development in 2022.

I worked both independently and in teams to build a number of websites that I had personally created, as well as to develop websites that had already been conceptualized in Figma and Adobe XD.

Education:

- Medical studies, 2013-2016;
- High School of Economic - Microeconomics and microeconomic theory, 2009-2013.

Languages:

- English: Fluent.
