seaGO®

Fenders & protection

Edition #01 / 2026

Built on experience. Designed for life afloat.

Good protection starts with understanding how it will be used.

Drawing on years of experience in the marine industry, we have partnered with a leading specialist fender manufacturer to develop a range of our own. Combining Seago's practical knowledge with specialist manufacturing expertise, the collection brings together robust construction, carefully considered shapes and attention to the details that matter.

Across the inflatable range, valve types are selected to suit each product's design and application. Throughout the collection, the emphasis remains consistent: well-formed products, a high standard of manufacture and dependable protection for life around the water.

From cylindrical fenders and round buoys to dedicated bow and dock protection, each product has a clear role within the range. Different shapes and configurations give boat owners a choice of protection for their vessel, berth and everyday boating needs.

The Seago fender range. Experience in every detail

Find your protection

Explore the Seago range, from everyday fenders to dedicated bow and dock protection.

04 — Cylindrical fenders
Explore the sizes and colour options.

08 — Solid head buoys
Round fenders, with specifications and ordering details.

12 — Bow protection
Bow buoys and bow fenders for different applications.

16 — Dock & corner fenders
Protection for pontoon edges, jetties and corners.

20 — Block & multi fenders
Straight, flexible and adaptable protection formats.

24 — Dock wheels & accessories
Docking protection and the finishing details.

All Seago fenders are supplied in cardbord boxes ready to be shipped - life made simple.

FENDERS / A-SERIES

Cylindrical fenders

Designed for dependable everyday protection, the Seago A-Series combines durable marine-grade construction with reinforced attachment points to help safeguard your boat from pontoons, quaysides and neighbouring vessels. Built for life afloat and available in a wide range of sizes and colours, they are ready for everything from marina berths to extended cruising.

A-Series - Design in detail

Protection for every alongside moment.

From a familiar marina berth to a weekend raft-up, the A-Series creates a protective buffer between your boat and the surfaces around it. Its classic cylindrical shape sits neatly against the hull, helping cushion contact with pontoons, quaysides and neighbouring boats.

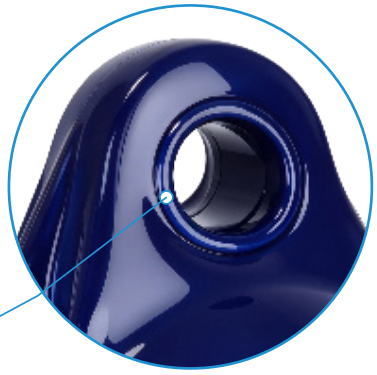

Designed by Seago and shaped by years of marine industry experience, this range combines a robust, well-formed body with reinforced attachment eyes and a practical inflation valve. Suitable for vertical or horizontal use, it is available in a choice of sizes and colours to suit your boat.

Cylinder fenders

Reinforced eye

A reinforced eye provides a secure attachment point for your fender line. Eyes at both ends let you position the fender vertically or horizontally to suit the berth.

Reliable valve system

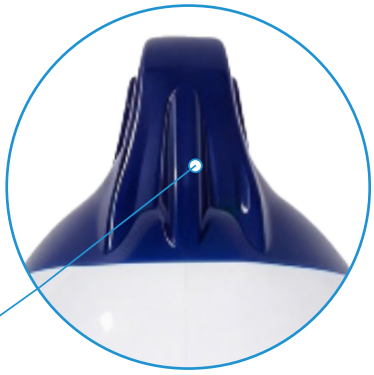

An accessible inflation valve lets you adjust the fender's firmness. Set into the shoulder area, it provides a practical inflation point when preparing your fenders for use.

Requires needle adapter.

Reinforced moulding

Shaped reinforcement supports the rope attachment area. The sculpted end section brings strength where the fender is suspended, while flowing smoothly into the rounded profile of the body.

A-Series - Range at a glance

Inflation adapter type for the majority of the Seago fender range.

2.9psi (Maximum)

A-Series cylinder fenders

Size	Dimensions (cm)	Navy	White	White/Blue	Black	Anthracite

FENDERS / SHB

Solid Head buoys

Offering generous stand-off protection and excellent impact absorption, the SHB-Series solid head buoys are designed for demanding berthing conditions. Their rounded profile and reinforced attachment point create a versatile solution for larger vessels, rafting situations and exposed moorings.

SHB-SERIES - Design in detail

Rounded protection. Practical by design.

The SHB-Series solid head buoy brings a rounded profile to everyday boat protection. Its full shape helps keep the hull away from pontoons, quaysides and neighbouring boats, providing a generous buffer where extra stand-off is useful when berthing or rafting alongside.

Suspended from the reinforced eye in its solid head, the buoy can be positioned along the hull to suit the berth. Drawing on Seago's extensive marine experience, the range is offered in six sizes, from 20 x 26.5 cm to 71 x 94 cm, and four colour combinations to complement your boat.

SHB-Series - Design in detail

Reinforced eye

A reinforced eye provides a secure point for your fender line, so you can position the buoy at the right height to protect your hull alongside a pontoon or another boat

Reliable valve system

Positioned within the head, the valve is easy to reach for inflation and pressure checks—helping you keep your buoy ready for use throughout the season.

Requires long conical adpter.

Solid head profile

The solid head supports the attachment point, while the rounded body creates a broad buffer between your boat and the berth.

Inflation adapter type for solid head buoys and low drag fenders.

2.9psi (Maximum)

BOW PROTECTION

Protection at the bow

Curved bow buoy and straight V-shape formats.

Bow buoy - measured to fit

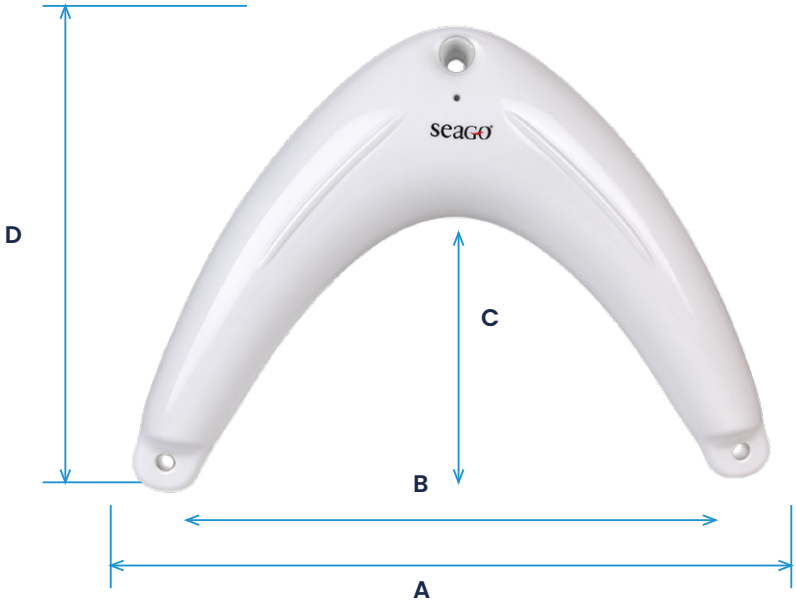

Protection where the bow meets the berth.

The curved bow buoy brings a protective buffer to the front of your boat, where conventional side fenders may leave the stem exposed. Its open centre follows the bow profile, while the two arms extend down either side of the contact area. It is a useful format to consider when the bow faces a pontoon, quay or neighbouring boat.

Choose the fit by comparing the inner clearance with your bow, as well as the overall width and height. The A-D diagram makes those checks easier to understand. White and Navy are available in two CIN7 stock sizes; the diagram provides separate Small and Large measurements.

DIMENSIONS A-D

A Outer width B Inner width
C Inner height D Outer height

Size	kg	A	B	C	D
Size 1	0.8	31	23	23	34
Size 2	1.8	57	45	32	50

A straighter profile for the stem.

Straight V-shape bow protector

Protect the leading edge of your bow when mooring bow-first against a pontoon or quay. The V-shaped profile sits around the stem—the forward edge of the hull—providing a buffer where conventional side fenders can leave the bow exposed. Its elongated shape helps protect against scuffs and knocks as your boat moves at the berth.

V-shaped profile

The recessed V-shaped channel fits around the bow's leading edge, extending protection along both sides of the stem.

THREE COLOUR OPTIONS

White

Body profile

End detail

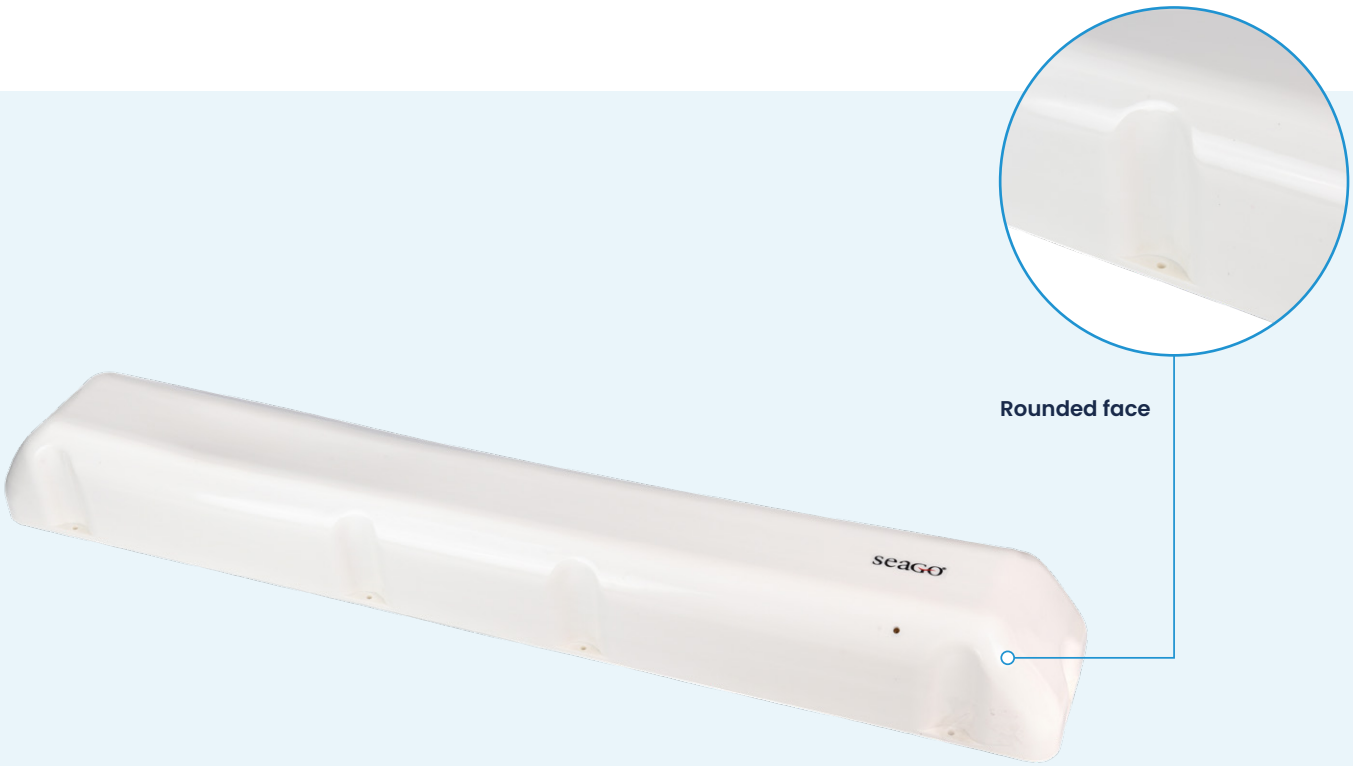

A softer welcome alongside

Permanently installed protection can make every arrival easier. The Seago straight dock fender fits to the edge of pontoons, jetties and marina berths, creating a resilient protective barrier between vessel and structure. Its broad profile helps reduce direct contact with hard surfaces while cushioning movement caused by tide, wash and changing weather conditions.

Colour	Size	Dimensions (cm)	Code	Box qty
White	1	25 x 88	D1-W	1
White	2	15 x 122	D2-W	1
White	3	15 x 148	D3-W	1
Navy	1	25 x 88	D1-N	1

Pontoon dome fender.

The raised dome profile creates a smooth contact surface that helps vessels glide gently against the berth. Its rounded shape reduces hard contact points while providing effective edge protection along pontoon and dock faces.

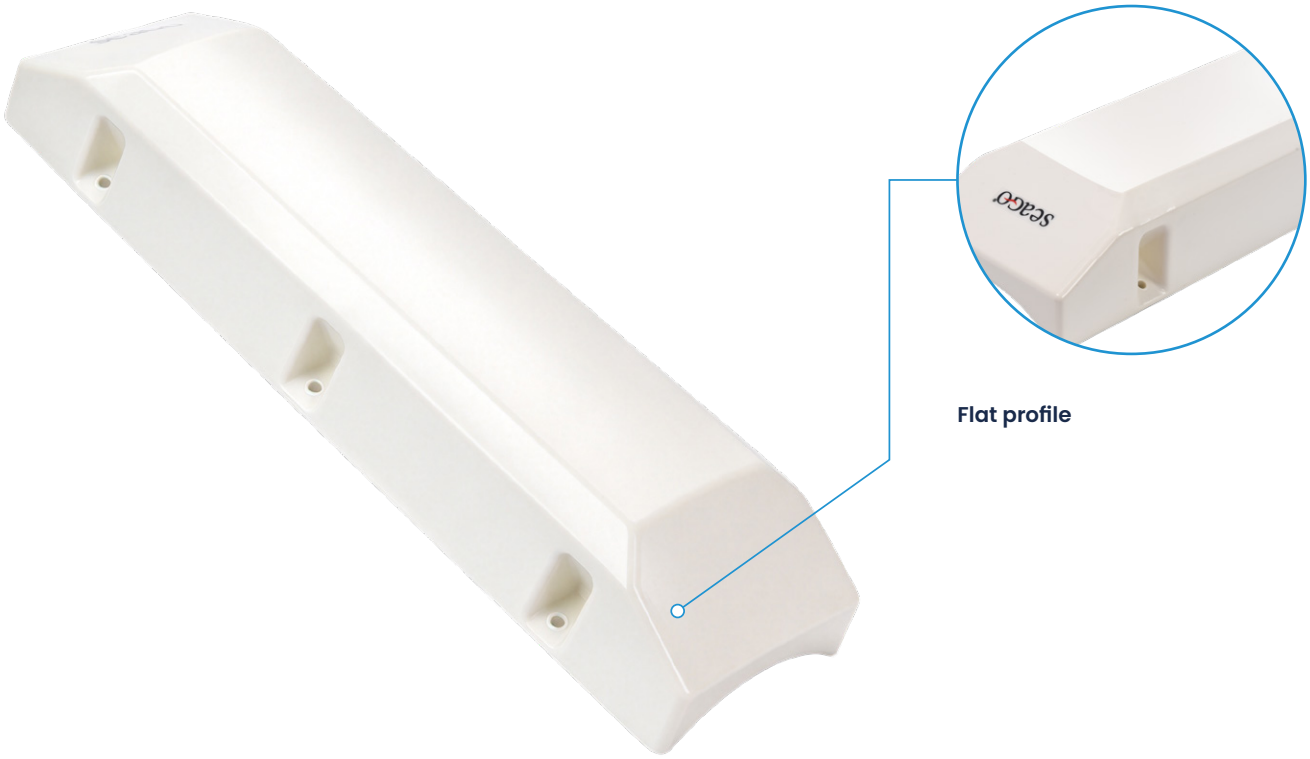

Pontoon dome fender / White

Size	Dimensions (cm)	Code	Box qty
1	10 x 15 x 100	PD-W	1

Pontoon flat fender.

Designed for continuous edge protection, the flat profile sits neatly along pontoon faces and dock structures. Available in three lengths, it makes it easy to create a consistent protective surface around individual berths or larger marina installations.

Pontoon flat fender / White

Size	Dimensions (cm)	Code	Box qty
1	10 x 15 x 63	PF1-W	1
2	10 x 15 x 122	PF2-W	1
3	10 x 15 x 185	PF3-W	1

The corner, considered.

Corners are often the most vulnerable points around a berth. The Seago corner fender is specifically shaped to protect 90-degree transitions where vessels can make unexpected contact when manoeuvring in confined spaces.

90-degree corner fender / White

Size	Dimensions (cm)	Code	Box qty
1	28 x 28 x 16	CF1-W	2

Follow the shape of the berth.

Articulated dock fender

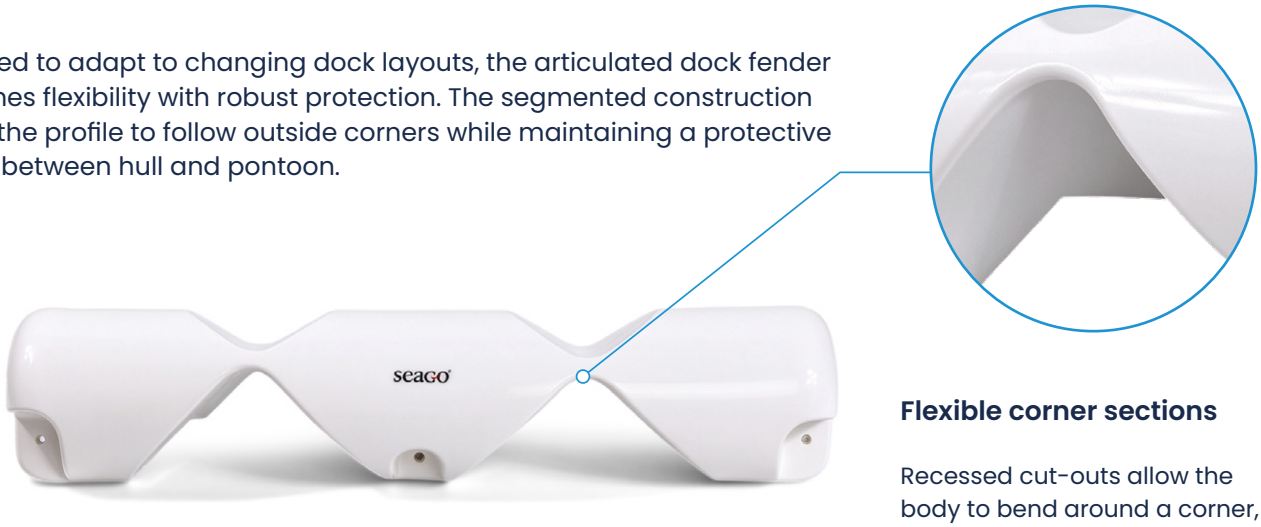

Follow the corner

Not every pontoon edge runs in a straight line. The articulated dock fender uses connected sections that flex around corners and directional changes, allowing protection to continue where conventional straight profiles stop.

Articulated - design in detail

Protection that follows the corner.

Designed to adapt to changing dock layouts, the articulated dock fender combines flexibility with robust protection. The segmented construction allows the profile to follow outside corners while maintaining a protective barrier between hull and pontoon.

Flexible corner sections

Recessed cut-outs allow the body to bend around a corner, keeping protection close to the pontoon edge.

REAR VIEW

Articulated dock fender / White

Size	Dimensions (cm)	Code	Box qty
1	19 x 19 x 98	PA-W	1

A longer profile alongside.

Low drag fender

The low drag fender combines a streamlined profile with generous protective volume, offering an alternative to traditional cylindrical fenders. Its elongated shape reduces rolling and movement while maintaining a substantial cushioning surface against pontoons and neighbouring vessels.

Head detail

The contrasting head carries the attachment eye. Available in Orange/Black, in three sizes.

Low drag - range at a glance

Low drag fender / Orange-Black

Size	Dimensions (cm)	Code	Box qty
1	23 x 48	LD1-OB	1
2	30 x 61	LD2-OB	1
3	34 x 74	LD3-OB	1

Three sizes provide flexibility across a wide range of vessel types, while the high-visibility Orange and Black colour combination ensures the fender remains easy to identify during deployment and recovery.

DOCK WHEELS & ACCESSORIES

Dockside protection

Designed for exposed docking areas and pontoon corners, the Seago dock wheel introduces a rotating protective surface that helps guide vessels safely alongside while reducing friction and localised contact pressure.

A smoother arrival.

Protection where the berth turns.

Docking manoeuvres rarely happen in a straight line. The Seago dock wheel is designed to protect vulnerable pontoon corners by providing a rotating contact surface that moves with the boat rather than resisting it.

Small wheel fender / White

Corner mounting bracket

Shaped to sit over the pontoon corner, with fixing points on the mounting faces.

Removable top cap

The cap covers the central fitting, keeping it accessible when needed.

Dimensions (cm)	Code	Box qty
28 x 28 x 12	DW1-W	1

The Seago Spirit

Founded in 2003, Seago has grown from a specialist supplier of lifejackets and liferafts into a trusted name across the leisure and commercial marine sectors. Throughout that journey, one principle has remained unchanged: delivering dependable marine equipment that combines quality, performance and value.

Whether exploring coastal harbours, crossing open water or preparing for life aboard, sailors rely on equipment they can trust. That responsibility shapes everything we do. From product design and development to customer support and aftersales service, our focus is on creating practical solutions that enhance safety, confidence and enjoyment on the water.

We believe adventure begins with preparation. By making reliable marine equipment accessible to more boat owners, Seago helps people spend more time doing what they love, with confidence in the equipment they take with them. Our products are developed with real-world boating in mind and are continually refined through experience, innovation and customer feedback.

Today, Seago supplies a comprehensive range of marine products across leisure and commercial markets while remaining true to the values on which the company was built: quality, reliability, innovation and exceptional service. As boating continues to evolve, our commitment remains the same: to support every journey with equipment designed for life on the water.

Seago. Designed for Adventure. Trusted for Life on the Water.
