We are NOMOQ, a pioneering high-tech company that primarily supplies craft beverage manufacturers with digitally printed aluminum beverage cans. We offer a solution unseen in the market in terms of personalization, speed and flexibility - regardless of whether our customers want to print one, one thousand or one hundred thousand cans with individual designs.

Our state-of-the-art digital printing technology delivers a quality that is perceived by our customers as revolutionary and which turns designs on cans with unlimited colors and finishing effects into real works of art. We do not rest until the beverage cans decorated by us look as perfect as our customers' drinks taste in them. This is our promise and passion, because together "we can do".

We're looking for a Software Developer (Generalist) to join our Platform Team as developer #3. We need someone who thrives on variety - you'll jump from AWS infrastructure to no-code automations, from debugging Python backends to optimising customer workflows. If you prefer working on just one part of the stack, this isn't the role for you. But if you love understanding how everything fits together, you'll love it here.

Software Developer / Tech Generalist

100%, Remote or Hybrid (Royal Leamington Spa, UK or Kirchheimbolanden, Germany)

The Team

At NOMOQ, we're not a traditional software company - we create real, physical products! Our digital printing technology brings custom aluminium cans to life, and our software team builds the platform that makes it all possible.

From craft brewers to well-known beverage brands, we help customers turn their creative ideas into stunning, ready-to-fill cans. Our web platform makes it easy to upload designs, collaborate with internal and external teams and manage orders. Behind the scenes, we've implemented smart automations that help our production team work like a well-oiled machine.

While we love using no-code and low-code solutions for their speed and flexibility, we also develop custom solutions when needed to create the perfect experience. Think of us as the bridge between the digital world of web orders and the physical world of manufacturing - pretty unique, right? 🏭✨

The best part? At the end of the day, we can actually drink from what we help create! How cool is that? 🥤

What you'll do:

- **Own critical systems:** As one of three developers, you'll have real ownership over platform components - your decisions matter and your improvements ship to production quickly.
- **Solve real problems:** Every bug you fix and workflow you optimise directly helps craft brewers get their products to market. You'll see the cans you helped create in stores.
- **Master modern technologies:** Deep-dive into an impressive tech stack (AWS serverless, Odoo ERP, AI tools, no-code platforms) - knowledge that's highly transferable and valuable.
- **Work with AI daily:** Use cutting-edge AI tools (ChatGPT, Claude, Cursor) as part of your regular workflow - stay ahead of the curve on how AI is changing development.
- **Direct business impact:** With our small team, you'll work directly with leadership and see how your technical decisions affect business outcomes.
- **Shape the future:** While focusing on stability today, you'll identify and document what needs to be built next - your insights will drive our technical roadmap.
- **Learn the full picture:** Unlike large companies where you'd own a tiny slice, here you'll understand the entire platform - from customer order to printed can.
- **Be a true generalist:** Work across the full technology spectrum - infrastructure, backend, integrations, and even no-code solutions when they're the smart choice

What we expect you to bring to the team:

- **Solid programming fundamentals** in Python and/or TypeScript/JavaScript; ability to read, understand and modify existing code confidently.
- **Troubleshooting mindset:** You enjoy diving into issues, finding root causes and implementing reliable fixes.
- **Platform thinking:** You understand how different pieces of a system fit together and can trace issues across multiple services.
- **Cloud computing experience** with AWS services (Lambda, API Gateway, CloudWatch) or similar platforms, plus understanding of serverless architectures.
- **AI development skills:** You actively use AI coding assistants to work more efficiently and can write effective prompts to get quality results.
- **Experience with APIs and integrations:** REST APIs, webhooks and keeping different systems talking to each other.
- **No-code/low-code curiosity:** Either experience with tools like Airtable, Bubble, Make/Integromat OR excitement to learn them.
- **Patience and attention to detail:** You understand that maintaining production systems requires careful, methodical work.
- **Ability to explain** complicated technical concepts and decisions to non-technical people.
- And, maybe most important, **the engineering mindset:** this means that you're able to quickly understand complex systems and to propose solid solutions.

Nice to have:

● Experience with Odoo or other ERP systems ● Knowledge of e-commerce or manufacturing workflows ● Experience at an early-stage startup or scale-up ● Portfolio of personal projects or open-source contributions

Our Tech Stack:

Frontend: TypeScript, Webflow, Bubble **Backend:** Python (Odoo), AWS Lambda, node.js **Infrastructure:** AWS, GitLab CI/CD **No-Code/Low-Code:** Make/Integromat, Bubble **AI Tools:** ChatGPT/Claude, Cursor for development **Integrations:** HubSpot, Airtable

Why us?

● **Impressive tech stack** - gain deep experience with modern technologies (AWS, Odoo, AI tools, no-code platforms) in a real production environment ● **Competitive salary** aligned with your experience and impact ● **Flexible working environment** - choose your hours, work remotely or hybrid (Leamington UK or

Kirchheimbolanden Germany) ● **Personal and professional development** - personal education budget for conferences and courses ● **Work autonomously** with cutting-edge technologies - you'll become the expert on how our systems work ● **Informal, kind and respectful environment** - you are expected to express your voice openly and you will be heard ● **Friendly, international and highly experienced team** ● **Stable, meaningful work** - maintain and improve a platform that real businesses depend on daily ● **Learning opportunity** - master a diverse tech stack while working on a mature, successful platform

Does this job appeal to you?

If you have the necessary qualifications and are excited about building platforms that bridge digital and physical worlds while using AI to ship faster, then write to us at **jobs@nomoq.com** and tell us about yourself and what you want to achieve with us.

Please include:

- Your CV/resume
- Links to your GitHub, personal projects or anything you've built
- A brief note about your experience with AI development tools
- What excites you about working at the intersection of software and manufacturing

Join us in revolutionising the beverage packaging industry - one can at a time!
