THREATLOCKER®
DEFENSE AGAINST CONFIGURATIONS (DAC)

BENEFITS

Less stress, less headaches

One dashboard with all your answers.

Stronger security

Find and fix misconfigurations before they are exploited.

One-click compliance

Know exactly where you stand with any framework.

## The Why behind the solution

You can prevent many cyberattacks by simply eliminating your misconfigurations.

An unused admin account left active. A firewall rule no one remembers adding. A default Windows setting that quietly weakens your defenses. These small gaps often go unnoticed, but they're exactly what attackers exploit to gain a foothold.

Meet ThreatLocker® DAC (Defense Against Configurations).

ThreatLocker DAC is a powerful dashboard, built right into the ThreatLocker agent. It shows you exactly how your systems are configured and what needs fixing. Think of it as your ultimate resilience assessment center

It flags potential risks. It highlights misconfigurations in your allowlist, ability to use USB drives, it brings to light the dormant admin rights accounts, and it highlights potential gaps in compliance. And then suggests actionable steps to fix them all. No more researching different configurations. No more guesswork. Just clear, quick answers, all in one place.
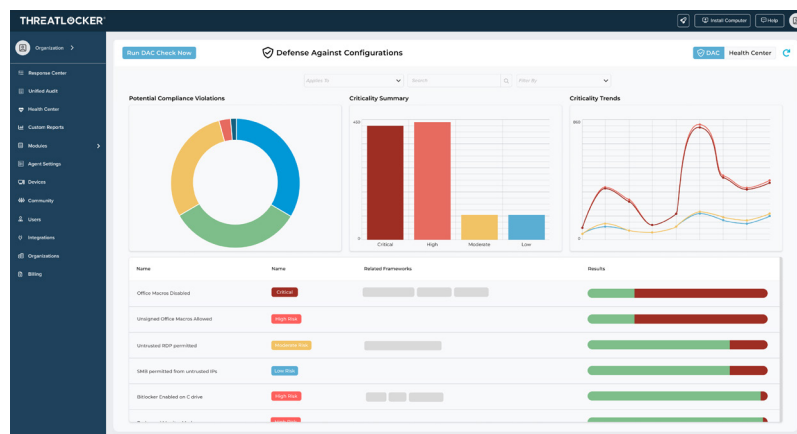

Snapshot displays specific misconfigurations, the trend over the past 30 days, and the compliance frameworks that may be violated.

How it works

Log into the ThreatLocker® portal; the DAC dashboard will be your default homepage. Like a dedicated watchdog, it runs a deep scan of your systems every day. So, what you see is always current. Everything's laid out in one place: Charts, lists sorted by security criticality, and filters by system or compliance framework. If something's misconfigured, it's swiftly flagged, so you can act promptly.

Bonus: DAC is lightweight and lives right on the endpoint. That means it sees everything first, and fast.

The results?

Clear, actionable insights into security gaps. Instant visibility into compliance status—whether it's Essential 8, CIS, HIPAA, or ISO 27001.

If you are trying to achieve FedRAMP Ready or FedRamp Authorized designations, DAC will highlight the gaps in your NIST 800-171 and NIST 800-53 controls so you can close vulnerabilities quickly, pass audits with confidence, and strengthen your environment.

With an action list at your fingertips and your quick response, you now have a hardened, optimized environment. Plus, you don't even need to log in regularly to review the status. Insights are conveniently delivered to your inbox.

About ThreatLocker®

ThreatLocker® is a Zero Trust Endpoint Protection Platform that improves enterprise-level server and endpoint security with Zero Trust controls, including: Allowlisting, Ringfencing™, Storage Control, Network Control, ThreatLocker® Detect, Elevation Control, and Configuration Manager.
