

Exporting CT scans to Hybridge from Instrumentarium OP300

1. On your desktop, right click on an empty space. Go to “New” and click “Folder”. A folder will appear with highlighted blue text. Type in the patient name and push “Enter” on your keyboard.

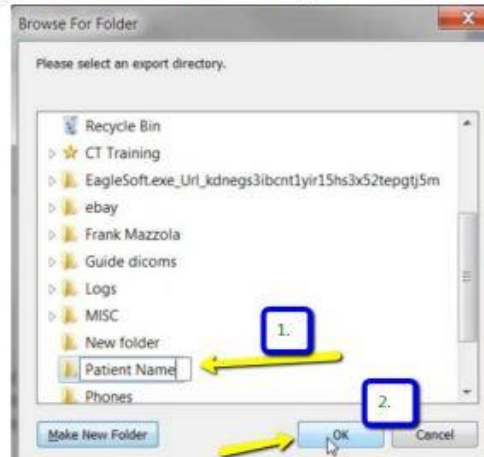

2. In your Instrumentarium, click on “File”, then “Open Image”.

3. Select the CBCT scan by clicking on it once. Then click “Export”.

4. Select the folder you just created on the desktop and click “OK”.

5. After the DICOM exports and saves, go to the patients folder and verify the .dcm files were exported correctly; there should be several hundred files.

6. Go back to the desktop, right click on the patients folder, go to “Send to”, and select “Compressed (zipped) folder”. A duplicate folder will be made with either a zipper on it, or a blue “Z”.

(*** If following a Dual Scan Protocol, please zip scans individually and label accordingly; i.e: “Patient Scan” and “Denture Scan” ***)

7. Now drag and drop the zipped folder into the Hybridge portal at hybridgerx.com

Congrats! You’ve now sent your CT scans to Hybridge!
