inugo.

ENFORCEMENT.

Inugo provides two integration methods for seamless enforcement with your chosen partner:

API Integration - Your enforcement partner fetches all rights (sessions, booking, whitelists) from us. They handle breach detection and citation insurance.

Static Enforcement - Load your compliance rules, and our cameras will determine if a parker is within regulations. Violations are then sent to your enforcement provider.

CASUAL VALIDITY CHECKS

This feature allows your operational staff to perform casual validity checks while on the move, allowing them to perform spot enforcement actions.
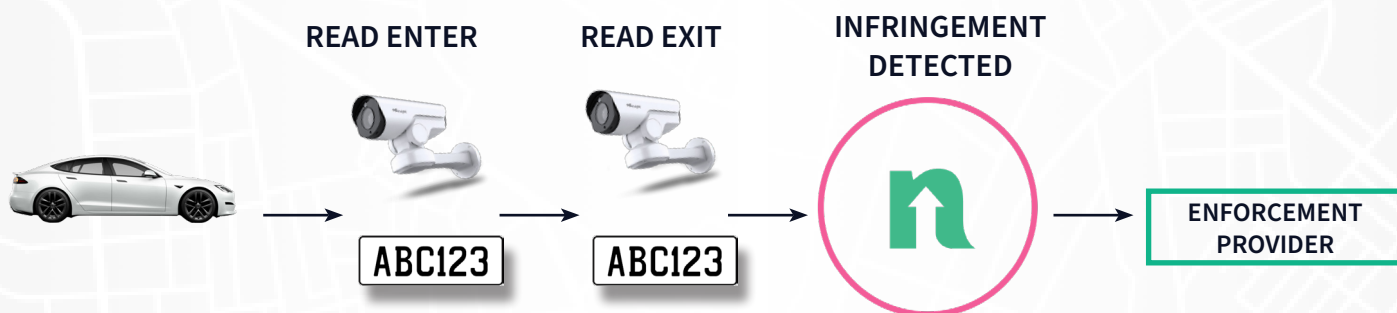

OPEN LOT ENFORCEMENT

The Inugo solution can be directly integrated into your enforcement provider's systems, giving your provider a real-time view of compliance at your lots.

NO INTEGRATION?

If you prefer not to integrate with an enforcement parnter, simply use the Inugo app with enforcement enabled to manually monitor your site.

HOW DOES STATIC ENFORCEMENT WORK?

READ ENTER   **READ EXIT**   **INFRINGEMENT DETECTED**

ABC123 → ABC123 → n → ENFORCEMENT PROVIDER

PARKERS ARE ALERTED WHEN THEY HAVE 15 MINUTES LEFT

LIVE UPDATES IN THE APP FOR MANUAL CHECKS
