

Enhanced Compliance Cloud

In the complex landscape of pharmaceuticals, ensuring comprehensive traceability on a global scale poses significant challenges. Maintaining control internally over an ever-evolving master data set is generally challenge enough, especially with a complex technology infrastructure. Updating the data in your trading partner systems you obviously do not control or even have access to is nearly impossible, yet it is a real hindrance to the continuous flow of goods.

Automated and efficient compliance

Enhanced Compliance Cloud returns control to companies over the data impacting their direct and indirect trading partners. This cloud-based innovation integrates key modules, including Global Master Data, Proactive Partner management, WEEs and Exception Investigator, to deliver a holistic and agile solution. Enhanced Compliance Cloud is used by major brands including Kowa, US Antibiotics, Morris & Dickson, Smith Drug Company, Walmart Health, and more.

ATP Authorized Trading Partner

- Proactive partner management including state and federal license status.
- Medpro and NABP integrations for real time data queries.
- Secure record storage for audit and inspections.

FDA 3911 Report

- Automatically generate US FDA 3911 suspect product reporting.
- Support compliance with 24 hour FDA-reporting requirements.

SYSTEM VALIDATION

- Complete compliance with FDA CFR 21 Part 11.
- Ensure secure and reliable connections between trading partners.

SOM Suspicious Order Monitoring

- Monitor and track suspicious ordering activities of controlled substances.
- Automated alerting based on aggregated quantities and ordering behaviors.
- Visibility at the ingredient level to ensure compliance.

POLICIES AND SOPS

- Full set of policies and SOPs to adhere to federal and state regulatory requirements.
- Secure and accessible document storage with comprehensive version control.

Benefits

Enhanced Transparency

Achieve unparalleled visibility into the entire supply chain.
Real-time updates on product movements and status.

Operational Streamlining

Automated processes reduce manual efforts. Seamless collaboration with trading partners.

Actionable Insights

Access detailed analytics for informed decision-making.
Customizable reports cater to specific business needs.

Global Compliance

Ensure compliance with country-specific serialization regulations. Mitigate risks associated with diverse global standards.

Business Impact

Improved Efficiency

Streamlined operations lead to increased efficiency. Reduced risks of errors and delays in product movements.

Market Adaptability

Stay compliant with varying international regulations. Adapt quickly to changes in the global pharmaceutical landscape.

Strategic Decision-Making

Access to real-time and historical data for strategic planning.
Proactive responses to supply chain dynamics.

Complementary Clouds

Global Traceability Cloud

Global Traceability Cloud is designed to empower pharmaceutical companies with unparalleled global traceability capabilities.

Supply Chain Cloud

Manage product movement beyond 4-walls. Resolve supply chain exceptions with Investigator, and gain customer and product insights with Big Data Analytics.

Enhanced Compliance Cloud

In addition to Traceability, adhere to other critical compliance requirement including cGMP, Part 11, SOM, ATP.
