

Contract Extraction AI Agent

Turn scanned and unstructured contracts into data your systems can use.

Trask Contract Extraction AI Agent helps teams extract critical business data from contracts, attachments, and amendments, including scanned and unstructured documents. It reads contract documentation end-to-end, identifies the required fields, and turns them into reliable, machine-readable outputs for downstream systems. Everything runs inside your secure cloud environment, with your controls, review process, and audit requirements in place.

The Result

Less manual contract review, faster renewals and audit responses, fewer delays for downstream systems, and structured data ready for business use.

What Changes When the AI Agent Takes Over?

Manual contract reading becomes an automated, controlled, and explainable workflow. Analysts stop transcribing fields by hand and start reviewing exceptions. Cycles get shorter. Extracted data stays consistent across documents, teams, and downstream systems.

Three Benefits: Faster Review, Traceable Output, Consistent Data

Days → minutes

Teams move from reading every contract line by line to reviewing only exceptions, reducing manual effort while keeping expert oversight.

Manual → controlled

Legal, risk and operations teams get a governed review process with clear rules, ownership and approval steps before data moves downstream.

Inconsistent → standardized

Contract data is normalized into a consistent structure, making reporting, comparison and integration across systems easier.

Best fit: Designed for all industries.

How It Works: From Contract Intake to Structured Output

- 1 Image-to-Text Conversion.** Scanned and image-based PDFs are converted into searchable text. Attachments and amendments are processed alongside the main document.
- 2 Classification.** Each document is classified by type – master agreement, amendment, annex, NDA – so the right extraction logic applies.
- 3 Extraction.** Key fields such as parties, dates, prices, renewal terms, clauses, and obligations are extracted with references back to the source passage.
- 4 Validation.** Extracted fields are validated against business rules. Low-confidence cases route to a human reviewer. Reference data is enriched.
- 5 Structured Output.** Final output is delivered as structured JSON (JavaScript Object Notation), ready for system integration. Every field carries a citation back to the source document and page.

Built to Deploy Without Disruption

The agent deploys inside your cloud boundary. No core system is touched directly – extracted data flows through standard APIs into the systems you already operate. Delivery is modular: start with a PoC on a sample of your archive, scale to an MVP with integrations to your downstream systems or add a user interface for review and exception handling.

AI That Extracts with Evidence

The agent is built for controlled contract processing. It does not train on client contracts, and every output remains traceable to the original document. Legal, risk and operations teams can review the extracted data before it enters downstream systems.

Why Trask?

Trusted enterprise partner

30+ years in banking, insurance, telco, energy, automotive, and manufacturing. We understand complex environments and systems at scale.

AI-enabled engineering

AI supports how our 1,100+ engineers deliver, from analysis to operations. Faster delivery, with quality and control.

Production-ready AI

We build AI solutions for enterprise use, from RAG and smart search to AI agents. Secure, governed, and integrated.

Ownership beyond go-live

Trask designs, integrates, runs, and improves business-critical systems through Managed Services. Reliable and relevant after launch.

Want to Process Contracts Faster?

We'll show how the agent extracts key data from your contracts, attachments and scans in a PoC scoped to your environment and review process.
