

# Blockscout Update May 2026

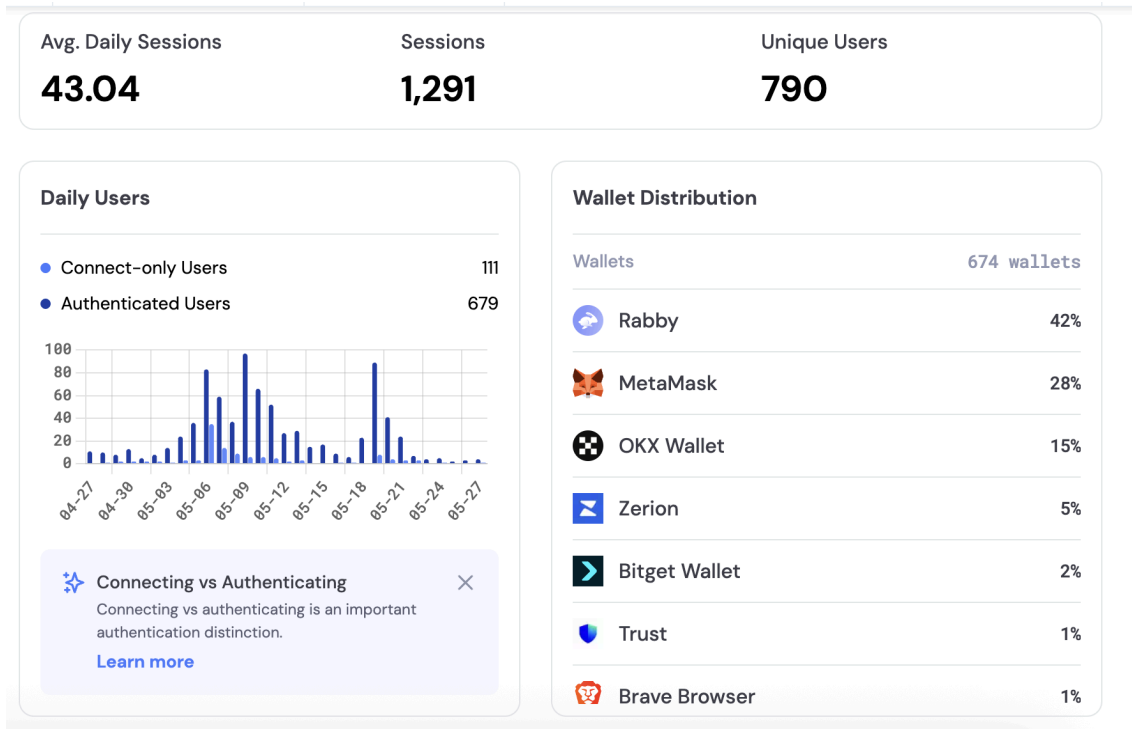

## M2 Badge Campaign

We completed the M2 badge campaign with 493 badges minted. Of these, 327 were minted using the Rootstock Global wallet. We promoted this campaign with a blog post, social posts, and newsletter reminders sent to 315K users across all our supported ecosystems:

- Blog: <https://www.blog.blockscout.com/rootstock-global-wallet-m2-badge/>
- Newsletter: <https://www.blog.blockscout.com/supporting-developer-access/>
- X: <https://x.com/blockscout/status/2051712557275373680>

## Wallet Usage

Over the past 30 days we saw an average of 43 daily user sessions with a total of 1291 sessions and 790 unique users. Of these 790, 679 were authenticated users who signed to prove ownership. <screenshot from Dynamic Dashboard>

## App Integration Push

We are struggling to find a good integration fit. Most projects we've contacted are unresponsive, unavailable, or uninterested. Of the projects that have shown interest, **Money on Chain** is the most viable candidate from an integration and volume standpoint.

However, rLogin, the login module used for login - <https://github.com/rsksmart/rLogin> is unmaintained and needs to be updated. This repo has not been worked on in years with many older dependencies. After our technical review we cannot do the work to update this repo for integration. If the RSK team could help update this repo, that would open the door to global wallet usage and adoption.

## Additional app status

App	Status	Notes
OpenOcean	Follow up	One response, multiple follow ups with no concrete updates. Have not confirmed if they would or would not like to proceed.
Aera	Follow up	Showed initial interest but unsure on how to add the SDK from a technical perspective. No additional response after several follow ups.
Mellow	Not possible	RSK wallet integration will not work because current vaults are not public.
Sideshift	Low usage	Current volume is too low to prioritize engineering work from their side.
Bedrock	No response	Multiple follow ups sent, the original contact did not read messages, and alternate contacts did not work out.
Rif	No response	Several follow ups and another contact attempt were made, but there was no meaningful response.
Merk1	No response	No response after outreach
Avalon	Not possible	Rootstock support is still TBA on their side, currently not integrated
Gamma	Not interested	Not prioritizing engineering effort on Rootstock

Layerbank	No response	The first contact deleted Telegram, a new contact was tried, and multiple follow ups received no reply
Tropykus	Closing	Integration was started on testnet, project shut down and is no longer active.
Sovryn	No contact	Reached through form and Discord, but no meaningful response despite repeated follow ups
Woodswap	No contact	After repeated follow ups, there was no progress
Boltz	Not interested	Unwilling to integrate due to issues with their current wallet library implementation.

## Ecosystem Integrations

Due to our work on the Global Wallet project, the following applications have been integrated on Rootstock.

- **Dynamic** <<https://www.dynamic.xyz>>: The dynamic wallet infrastructure is available as a standalone global wallet and integrated into the explorer.
- **Onramp** <<https://onramp.money>>: This fiat on/off ramp for ARS/RBTC is available as a standalone feature and integrated into the Blockscout wallet <https://rootstock-wallet.blockscout.com/>. We worked directly with Onramp to bring this integration to the RSK ecosystem.
- **Zerodev** <<https://zerodev.app>>: The RSK chain has been added and we are working on the final steps to enable gasless/sponsored transactions. We expect to have this working next month.

## June 2026 Plans

In June we plan to enable gasless transactions via the global wallet to test usage and demand and attract additional users to the Global Wallet. We hope to integrate with an application as well and are targeting Money on Chain if the RSK team is able to update rLogin to meet the technical requirements needed to implement our solution.
