Climate risk management is a critical, board-level issue within the insurance sector—impacting profitability, business resiliency, and brand reputation. Jupiter ClimateScore™ Global offers both portfolio- and asset-level analysis of chronic and acute physical climate risk. It enables insurers to optimize portfolio management, risk management, pricing and underwriting, longer-term profitability (including identifying market opportunities as well as risks), sustainability, and regulatory response.

**Portfolio & Asset Management**

**Portfolio planning**
- Incorporate climate analytics into portfolio and reinsurance decisions
- Identify regions and lines of business that may become less economically viable to insure, invest in, and operate in

**Underwriting and pricing**
- Improve underwriting guidelines to improve risk selection
- Integrate short- and long-term hazards into pricing
- Design and bring to market insurance products that are triggered by adverse climate conditions

**Investing**
- Understand how climate change will affect expenses and exit values for long-held real-estate assets
- Incorporate climate risk into market value analysis

**Risk avoidance**
- Help customers minimize impacts of climate risk through risk engineering and resiliency insights
- Offer solutions to companies who have invested in mitigation

**Regulatory Response & Disclosure**
- Provide quantitative and qualitative responses to shareholder questions and national regulatory requirements, as physical climate risk disclosure reporting becomes mandatory
