

# TEMPERED GLASS 9H

## Applying manual

## ENG

1. Use a wet cloth (1) to clean the surface of the phone. Thoroughly wipe the screen, then dry it and get rid of streaks with a dry cloth (2).
2. Use the DUST-ABSORBER sticker to remove dust and pollen particles.
3. Stick the GUIDE STICKER positioning stickers on the top layer of the glass on each edge, so that the cut-outs of the glass are visible.
4. Lay the glass on the screen (with the layer marked with number 1 facing down) matching its position with the speaker/camera/buttons.
5. Tilt the protective glass away from the screen and peel off the layer protecting the glass backing by pulling it off with sticker number 1.
6. Holding the GUIDE STICKER, retract the protective glass back onto the screen. Press on the center of the glass and wait for it to stick slowly on the screen by itself.
7. Remove the stickers.
8. Using a dry cloth, press the glass firmly and thoroughly against the screen over the entire surface, especially the edges.
