3Q is the European digital infrastructure for video streaming, OTT, and FAST channels. Founded in 2009 and headquartered in Munich, the company offers an online video platform “Made in Germany.” It runs on its own, independent European video infrastructure.

3Q offers a centralized online video platform with an API-first approach for hosting, managing, and distributing live and on-demand content via websites and apps.

Through the 3Q platform, companies can centrally manage their content - from live streams and on-demand videos to podcasts - and distribute it both via their own digital channels and through external platforms (third-party platforms).

The solution is complemented by a GDPR-compliant, accessible video player (WCAG 2.1/BITV 2.0) as well as an AI suite for automated transcription, subtitling, translation, and other AI-powered features.

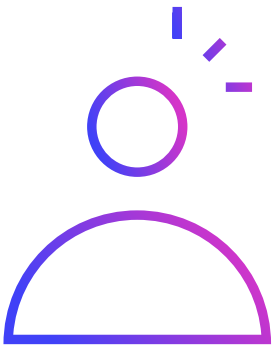

In addition, 3Q offers solutions for mobile journalism that enable publishers to produce and distribute local video news through streamlined, cost-effective workflows.

3Q is ISO/IEC 27001 certified and is an independent, wholly European-owned private company. In 2023 and 2026, 3Q won the Streaming Media European Innovation Award.

3Q works with over 1,000 B2B customers across Europe. These include companies, institutions, and sports providers, as well as media companies and publishers.
