

Your agents on one platform: *use, build, integrate.*

Hypatos provides the harness, IT decides what runs on it.

IT

Decides what runs

Prebuilt agents

Custom agents

Partner agents

Agentic logic / Model choice / Policies

Hypatos

Provides the harness

One harness for every agent

System access

Integration Hub

Context and SOPs

Context management

Tools & Skills

Building blocks

Orchestration

Hypatos Workflow

Guardrails

Human-on-the-loop

Evaluation, audits

Hypatos Insights

A harness for production agents, beyond model access

A model gives an agent reasoning. The harness gives it context, tools, limits and an audit trail.

Use prebuilt agents

Deploy agents for AP, procurement, orders and AR.

[Agent Library](#)

Build custom agents

Assemble agents from building blocks, without code.

[AI Agent Studio](#)

Integrate partner agents

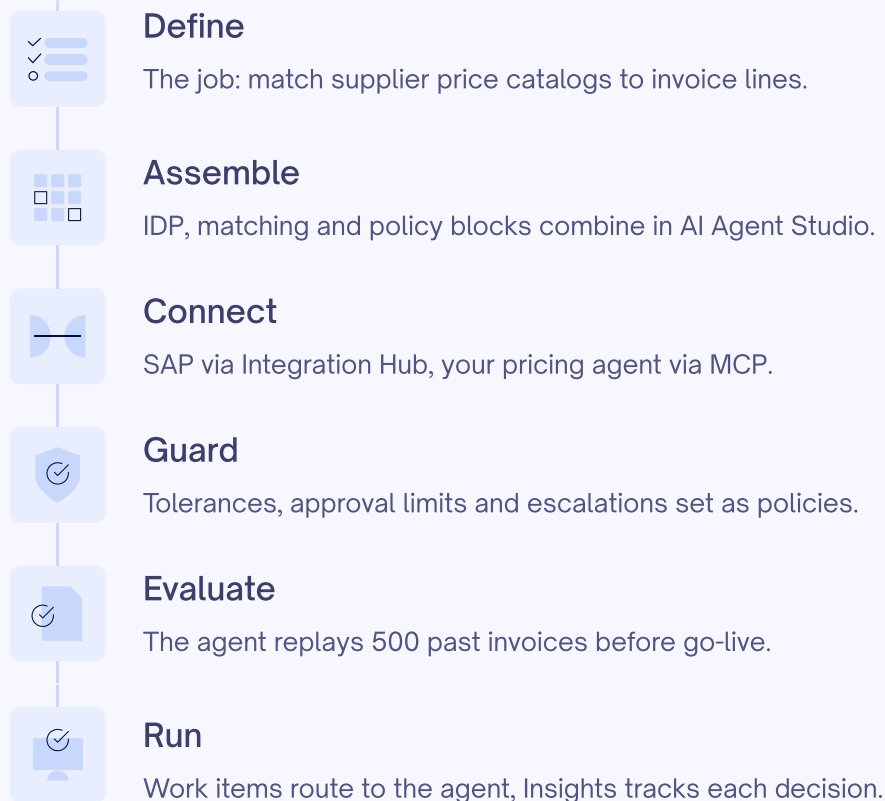

Run agents built elsewhere under the same controls.

[MCP, A2A, API](#)

Secure & Compliant:

From idea to production, *on the harness*

AGENT · CATALOG MATCH

JOB

Catalog prices vs invoice lines

BLOCKS

IDP · Matching · Policies

CONNECTIONS

SAP via Integration Hub,
pricing agent via MCP

GUARDRAILS

Within 2% approve, else escalate

EVALUATION

500 past invoices replayed

Deploy

Test Run

Platform architecture:
