WHO WE ARE

For nearly three decades, TKOart and TKOfx have partnered with leading corporations to transform workplace environments through Environmental Graphic Design, art integration, and custom fabrication.

Our team specializes in large-scale corporate art programs, branded environments, and experiential workplace design that enhance culture, inspire employees, and communicate a company's story through space.

We collaborate with architects, interior designers, and corporate workplace teams to deliver integrated EGD solutions that align with brand identity, company culture, and spatial design.

Our services combine:

- Environmental Graphic Design
- Corporate Art Consulting
- Custom Fabrication
- Brand-Driven Workplace Installations
- Art Program Management
- Turnkey Production & Installation

WHY ENVIRONMENTAL GRAPHICS MATTER

Today's corporate workplace is more than a functional space. It is a platform for culture, innovation, and brand expression.

Environmental Graphic Design transforms ordinary architecture into immersive environments that communicate identity, inspire creativity, and reinforce company values.

Strategic EGD programs help organizations:

- Strengthen corporate culture
- Improve employee engagement
- Communicate brand identity through space
- Activate underutilized architectural areas
- Create memorable client experiences

At TKO, we approach each project as an opportunity to translate corporate vision into visual narrative.

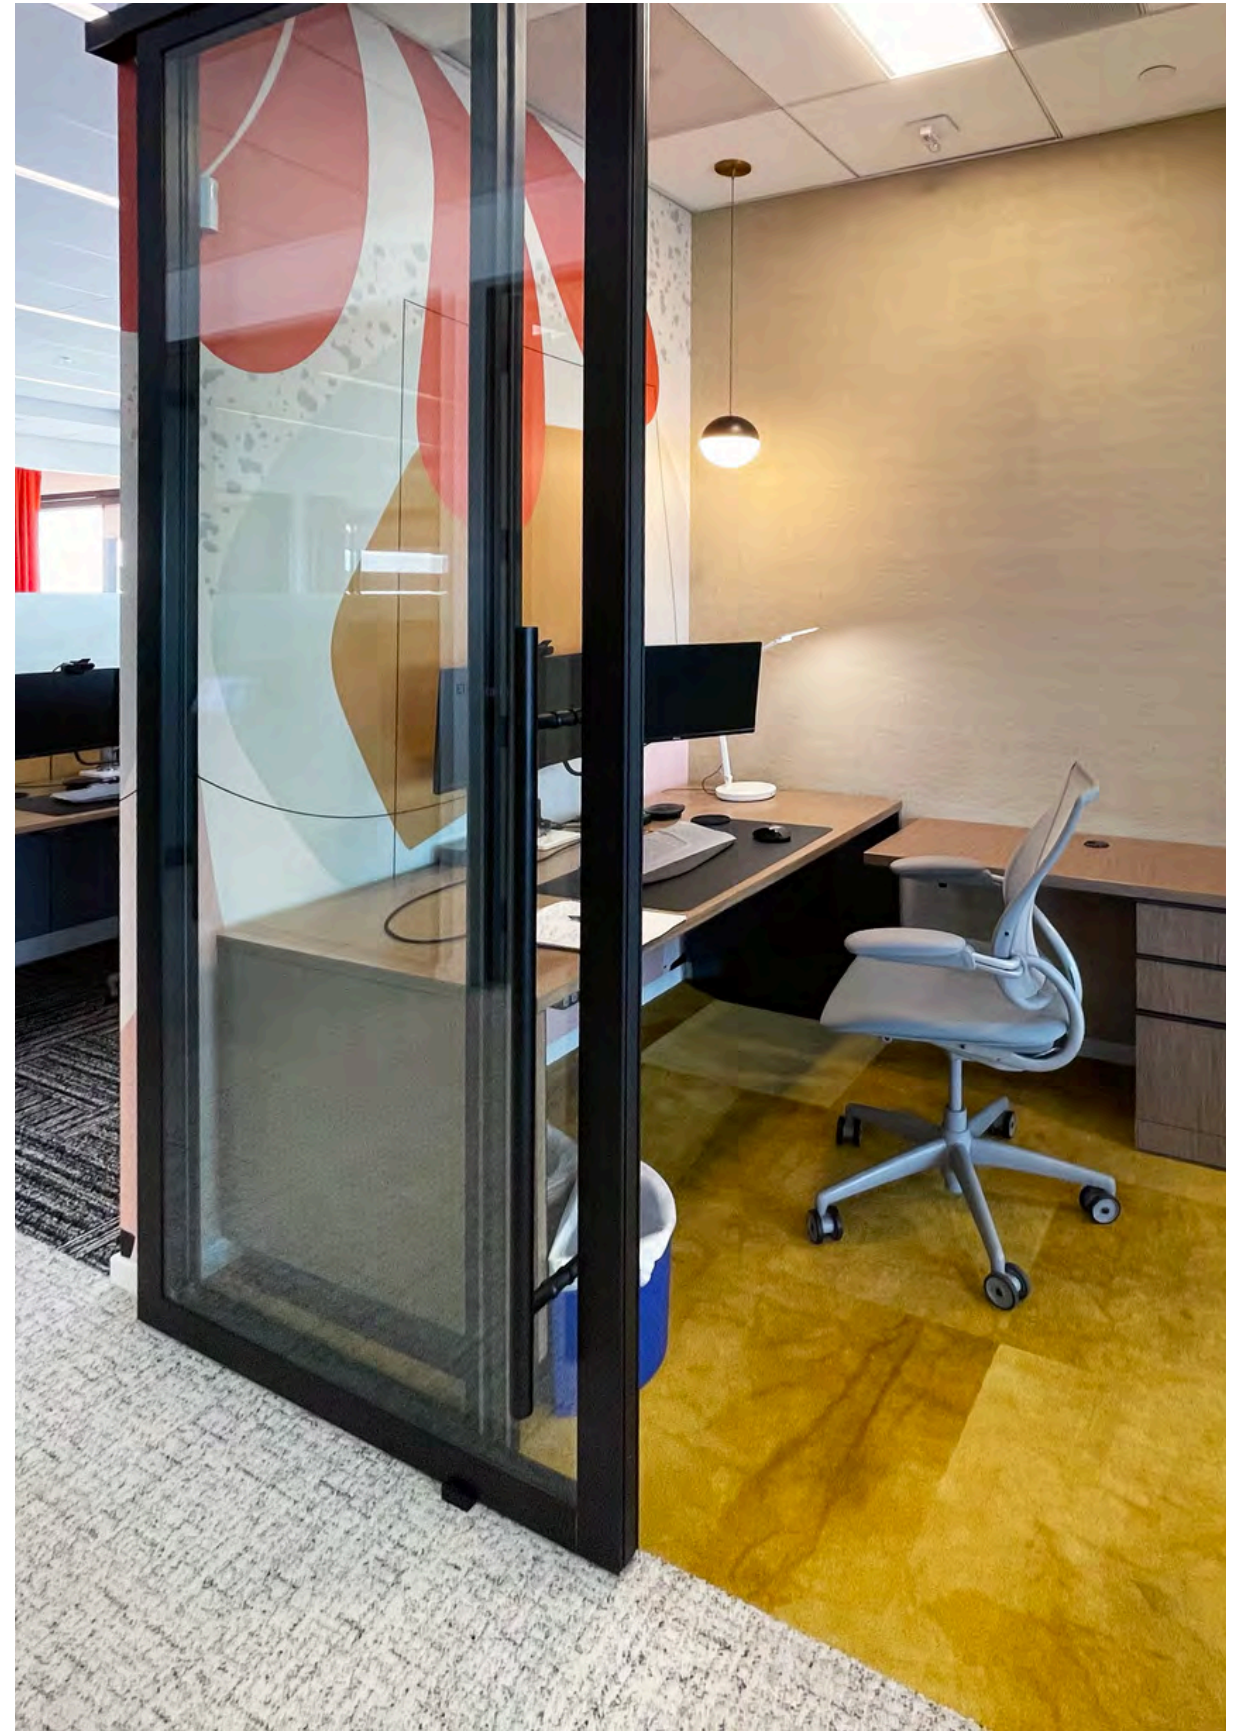

OUR APPROACH

Every project begins with a careful study of the organization, its brand, and the architecture of the space. Our process includes:

- Discovery and brand alignment to understand company culture, values, and workplace goals
- Concept development to create graphic and artistic solutions integrated with architecture
- Fabrication and production of custom installations engineered for durability and scale
- Installation and project management with turnkey execution and minimal workplace disruption

This process brings brand and architecture together to create an environment that feels intentional, immersive, and distinctly aligned with the organization.

CASE STUDY

TKO has had the privilege of supporting multiple Amazon workplace environments, delivering environmental graphics, art programs, and spatial storytelling installations that align with Amazon's culture of innovation and forward thinking.

Our work focuses on transforming architectural surfaces into experiential design moments that energize employees and celebrate the mission of the organization.

Services provided include:

- Environmental Graphic Design
- Workplace Art Strategy
- Custom Graphic Fabrication
- Branded Installations
- Large-Scale Wall Graphics
- Turnkey Production & Installation

PROJECT 01

For this space, TKO designed a comprehensive environmental graphics program that integrates architectural graphics, brand storytelling, and curated art. The strategy established visual continuity across multiple zones while reinforcing the organization's brand presence throughout the environment. Custom wall graphics, brand-driven artwork, and architectural accents were placed along primary circulation routes to guide movement and connect distinct areas of the workplace. The completed environment feels unified, energized, and clearly aligned with the brand's forward-looking identity.

PROJECT 02

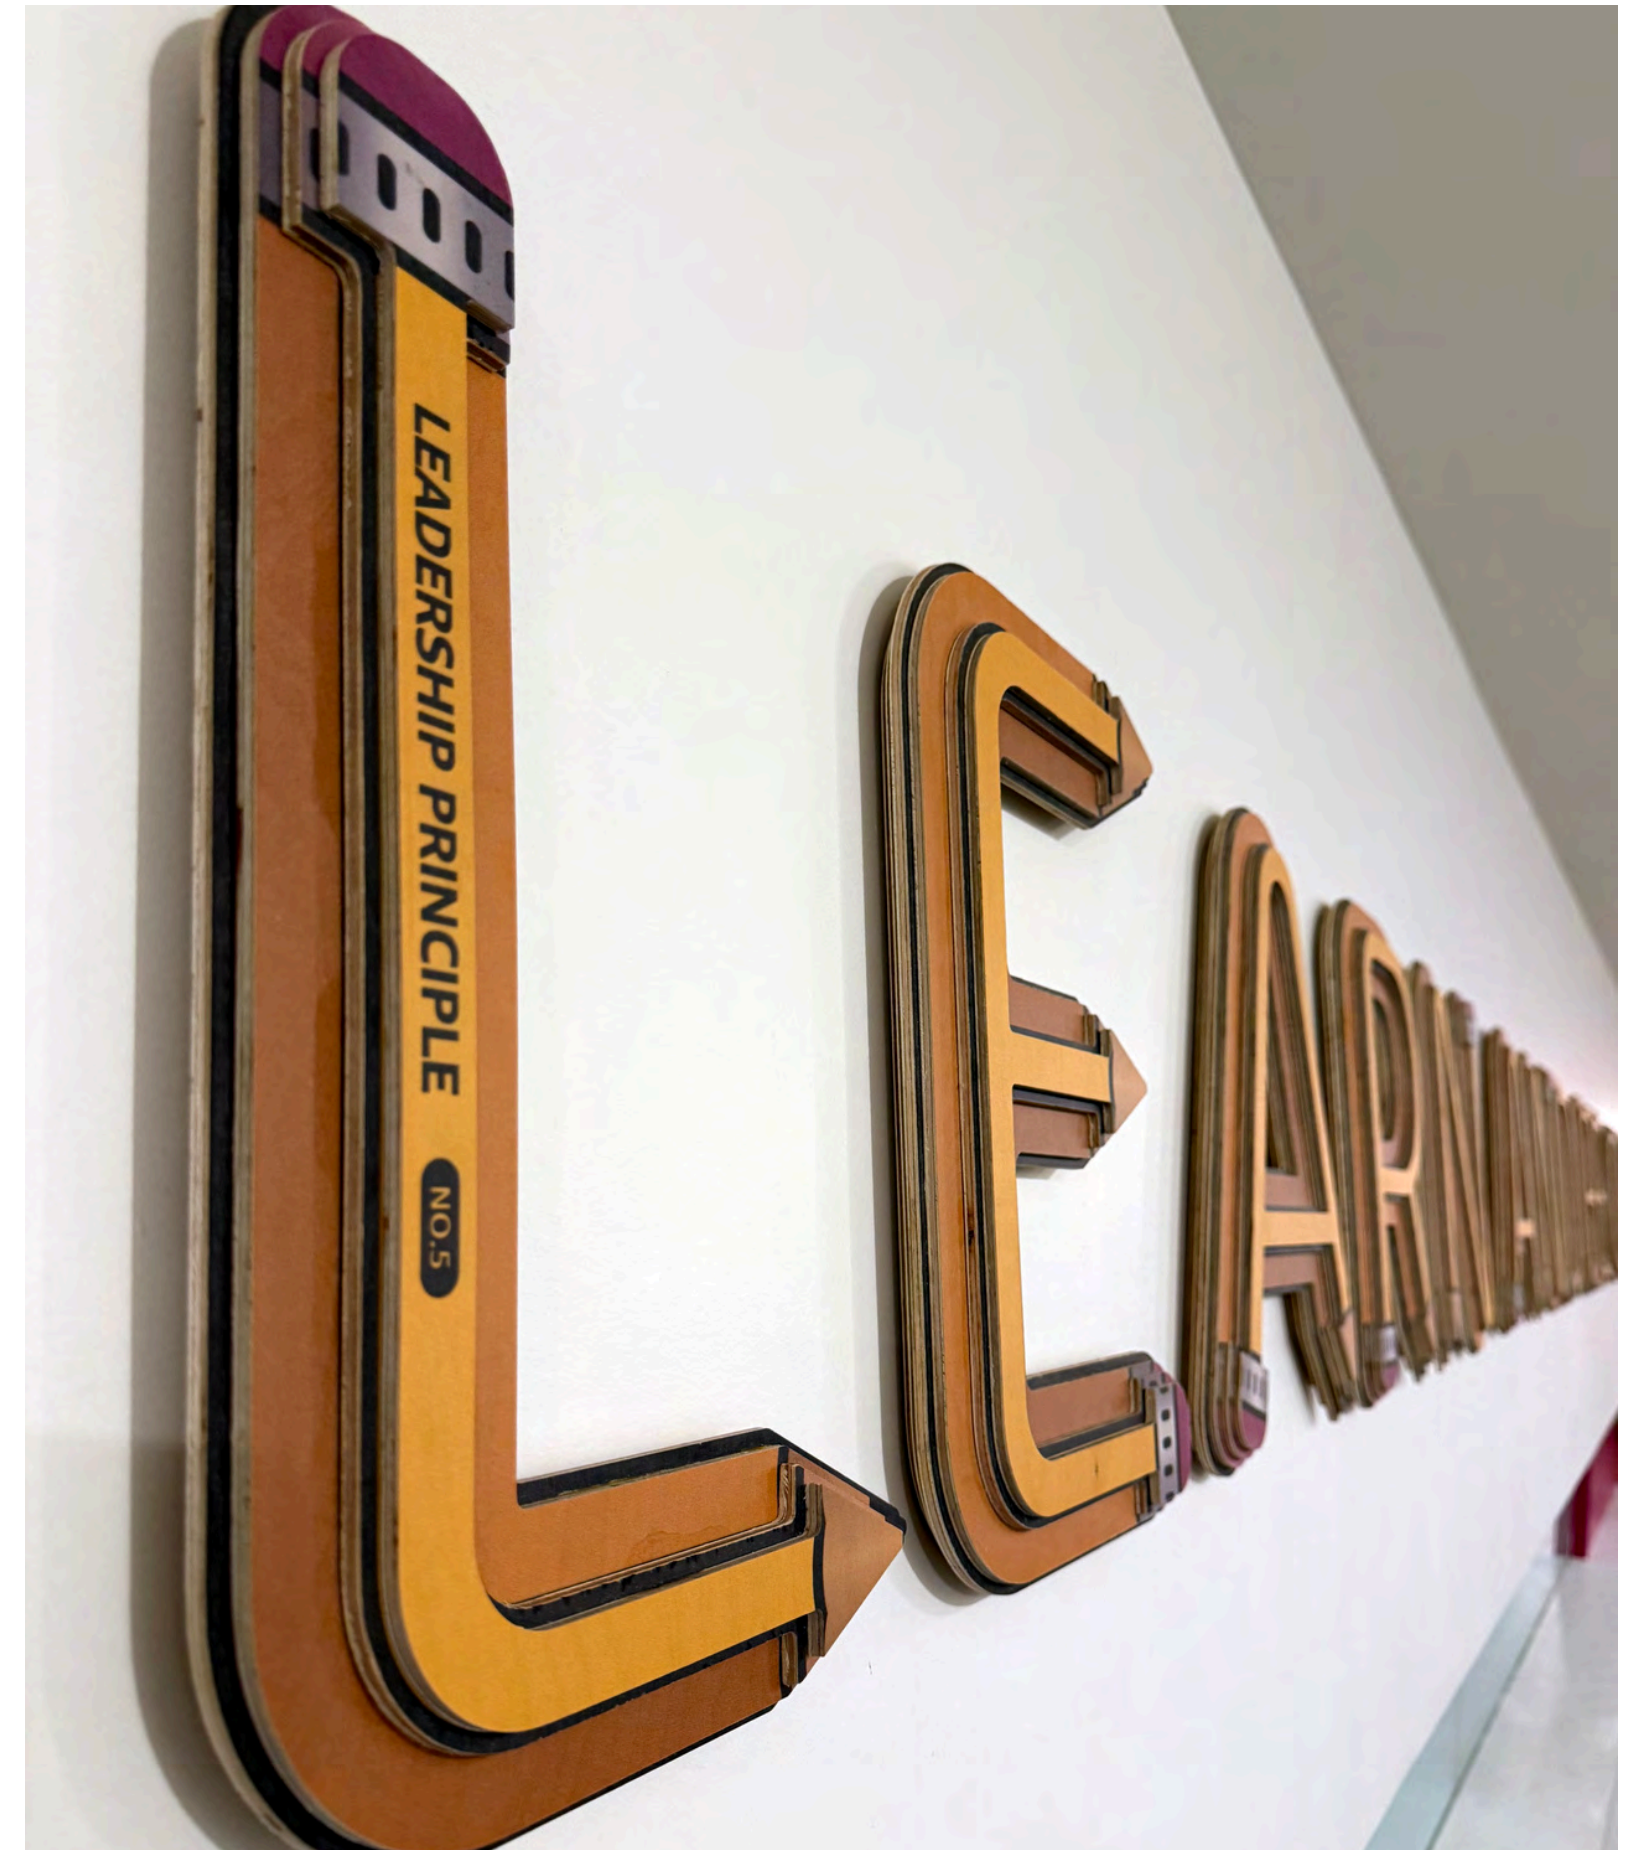

This project reimaged a conventional office interior as a visually dynamic workplace aligned with the company's culture of innovation. TKO collaborated with project stakeholders to develop environmental graphics that introduce rhythm, scale, and visual energy throughout the space. Large-format graphics activate corridors, collaboration zones, and key architectural sightlines, shaping how employees experience the workplace as they move through it. The result is an environment that reinforces cultural identity while creating a cohesive visual framework across departments.

PROJECT 03

This project introduced a layered visual experience designed to bring energy and identity to shared workplace spaces. TKO combined environmental graphics, custom fabrication, and curated artwork to create focal points that anchor key areas of the environment. Feature walls, large-scale installations, and integrated art elements draw employees into collaboration zones while activating the surrounding architecture. The result is a workplace that communicates creativity, innovation, and purpose through a series of immersive visual moments.
