

Synera takes major step in global growth with new US headquarter in Boston

Synera Technologies, Inc. strengthens the company's commitment to US customers and fuels the next stage of growth.

[Boston, MA, September 17, 2025] – Synera, the AI agent platform for engineering transforming product development processes worldwide, announced the founding of Synera Technology Inc, a newly incorporated US entity headquartered in Boston, Massachusetts. This move represents a significant strategic investment in the United States as a core market and a milestone in Synera's growth journey: establishing a permanent base in its fastest-growing market enables the company to scale further and provide direct, localized support to leading American enterprises including NASA and top automotive and aerospace innovators.

American enterprises are accelerating their engineering innovation efforts, making the region a natural next step for Synera's scale and maturity. At the same time, an "America First" procurement mindset increasingly requires suppliers to operate locally. By establishing a US entity, Synera is ensuring it can compete and grow alongside its most important customers.

Closer to Customers, Stronger Partnerships

For US customers, the new entity means faster, localized support, real-time collaboration within the same time zones, and closer partnerships. By investing in a permanent presence, Synera is deepening its role as a strategic partner to American enterprises, helping them accelerate product development, increase efficiency, and stay ahead in a globally competitive market.

Dr. Moritz Maier, CEO and Co-Founder of Synera: "The US is not just our largest market, it is the heartbeat of engineering innovation. With Synera Technologies, Inc., we are making a long-term investment in American industry: being closer to our customers, responding faster, and scaling at the speed this market demands. Our aim is to bring our cutting-edge engineering automation solutions closer to our American clients and tailor our services to meet the unique needs of this dynamic market. We chose Boston because it combines proximity to aerospace and advanced manufacturing hubs with an unmatched ecosystem of universities, research institutions, and technology companies. This gives us access to the top engineering talent we need to build a strong and sustainable US presence."

Alex Finkelstein, Co-Founder and General Partner of Spark Capital: "Synera has proven its ability to transform engineering workflows for some of the world's most demanding enterprises. Establishing a US headquarter is a natural next step and unlocks greater opportunities with American customers who expect local presence and support. This step will further strengthen Synera's position as a trusted partner for US enterprises."

About Synera:

Synera is an AI agent platform for engineers and was founded in 2018 by Dr. Moritz Maier, Sebastian Möller-Lafore, and Daniel Siegel, with headquarters in Bremen. The company is revolutionizing the engineering world with the goal of fundamentally transforming working methods. Synera enables engineers to automate manual processes. This frees busy experts from repetitive tasks and allows even highly complex development tasks to be solved faster and more effectively. The platform integrates seamlessly with existing CAX tools and processes and increases scalability. Synera focuses on automating engineering workflows and connecting

previously isolated software solutions. AI agents use these workflows and can be combined into collaborative multi-agent systems to expand the engineering team as a digital workforce. Synera's customers include companies such as Volkswagen, EDAG, Brose, Stihl, Miele, Airbus, and NASA.
