SEAM is committed to complying with all applicable legal requirements, protecting the environment, and minimizing the harmful effects of pollutants and waste across all our activities and sites. We actively promote a circular economy approach by reducing waste, reusing materials, and optimizing resource efficiency. We believe that the best way to prevent pollution is to identify potential hazards and proactively eliminate or minimize them to ensure safe and sustainable operations.

Our main environmental focus areas:

- **Circular Economy Integration:** Prioritize resource efficiency by designing processes that reduce waste, enhance reuse, and support recycling efforts.
- **Sustainable Decision-Making:** Integrate environmental considerations, including circular economy principles, into all decision-making and operational activities.
- **Environmental Awareness & Responsibility:** Promote sustainability awareness among employees and subcontractors, encouraging environmentally responsible behavior.
- **Waste Reduction & Resource Efficiency:** Minimize production waste through reuse, recycling, and the procurement of recycled, recyclable, or refurbished products and materials where feasible and economical.
- **Hazardous Materials Management:** Avoid unnecessary use of hazardous substances and seek safer alternatives whenever possible.
- **Energy Conservation:** Continuously improve energy efficiency to reduce consumption and carbon footprint.
- **Stakeholder Engagement:** Communicate our environmental commitment to clients, customers, and the public, encouraging active support and collaboration.
- **Continuous Improvement:** Regularly review and enhance our environmental management system to further reduce our environmental impact and support circular economy goals.
