Most AMI deployments don't fail because of technician skill — they fail in execution. Missed appointments, inefficient routing and dispatch, and unvalidated data slow down progress every day. Techs stay busy, but installations don't keep pace with the plan.

Fieldman closes that gap by controlling dispatching and field data verification — turning daily operations into a predictable, measurable system.

Fieldman enables **20–30% faster** AMI installations — without adding techs or increasing costs

INTEGRATED WITH  
**INDUSTRY LEADERS**

## WHERE THE 20-30% FASTER DEPLOYMENT COMES FROM\*

Fieldman is a system of connected capabilities, a portal, and apps that control work across the entire AMI deployment lifecycle – from warehouse to post-installation maintenance.

Each component removes a specific bottleneck. Together, they compound into measurable gains in speed, cost efficiency, and data quality.

\* Based on deployments serving 10,000+ meters

## PLATFORM COMPONENTS AND THEIR IMPACT

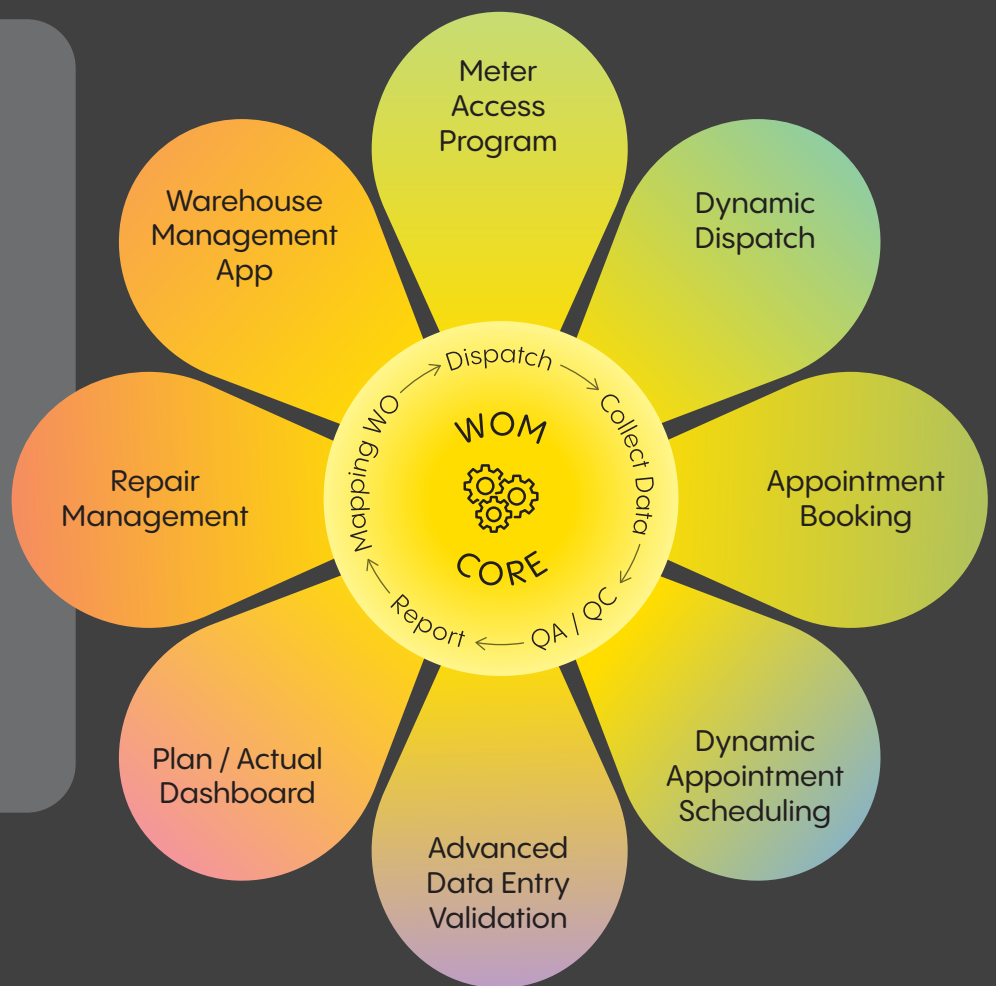

**10-20% faster**  
field data entry

**2-4x higher**  
appointment booking rate

Higher tech utilization  
→ **10-20% more jobs / day**

No spreadsheets  
or manual entry  
→ **Fewer errors**

**No inventory loss or  
mismatched meters**

**FIELDMAN IS THE  
STANDARD FOR  
EXECUTING  
AMI DEPLOYMENTS**
