

Raidho Acoustics

This is what craftsmanship sounds like

Introducing the new Raidho X2.8

There are loudspeakers that are assembled.

And then there are loudspeakers that are built.

The new **Raidho X2.8** belongs firmly in the second category. Hand-built in Denmark, created around proprietary Raidho drivers, wired and tuned with care, the X2.8 is not the result of choosing components from a catalogue and placing them in a cabinet. It is the result of a belief: that every part of a loudspeaker matters — and that true musical performance begins long before the first note is played.

At Raidho, craftsmanship is not decoration. It is the foundation.

The X2.8 is a 3-way floorstanding loudspeaker designed to bring music into the room with scale, presence and emotional weight. With two 8-inch bass drivers and extension down to **32Hz**, it has the authority to make music feel physical. The room breathes differently. A double bass has body. A kick drum has impact. A grand piano has size. But the real achievement of the X2.8 is not simply that it sounds large.

It sounds alive.

Every driver in the X2.8 is developed by Raidho and built in-house. This is central to the sound. Instead of adapting the music to standard off-the-shelf parts, Raidho designs the critical components around the performance it wants to achieve: speed, low distortion, clarity, dynamics and emotional immediacy.

The Raidho ribbon tweeter is a perfect example. Its moving mass is around **50 times lower than that of a conventional dome tweeter**, allowing it to react with breathtaking speed and precision. The result is not treble that calls attention to itself, but a sense of openness and transparency that makes the loudspeaker disappear. The air around a voice. The shimmer of a cymbal. The final decay of a note into silence. These details are not pushed forward. They simply exist — naturally, effortlessly and with remarkable purity.

The aluminium/ceramic bass drivers continue the same philosophy. Their membranes combine stiffness with self-damping, giving the X2.8 the ability to deliver deep, controlled bass without losing definition or timing. Power is easy to find in a large loudspeaker. Control is harder. Musicality is harder still. The X2.8 brings all three together.

Inside, the same attention continues where most people will never look. The crossover is built by hand with **Mundorf components**, **Nordost cable** and hand-made point-to-point wiring.

Raidho Acoustics

It is a level of execution normally reserved for far more expensive loudspeakers — but in the X2.8, it is part of the reason the speaker feels so immediate, coherent and emotionally direct.

The X2.8 gives you scale, but it does not trade scale for finesse. It gives you bass, but not at the cost of speed. It gives you detail, but never as an analytical exercise. Instead, it brings together the qualities that make music compelling: energy, space, texture, intimacy and drama.

“The new X2.8 has turned out way beyond our expectations,” says **Morten Kim Nielsen, CEO of Raidho Acoustics**. “It has the physical foundation of a serious full-range loudspeaker, but it also carries the speed, transparency and emotional connection that make Raidho special. To us, this is not just a bigger loudspeaker. It is a statement loudspeaker in the X series.”

The Raidho X2.8 offers a remarkable level of performance for its price — not by cutting corners, but by bringing true Raidho engineering and Danish craftsmanship into a speaker that delivers both large-scale sound and genuine high-end refinement.

It is built for listeners who know that great sound is not only measured in frequency response, driver size or cabinet volume.

It is measured in moments.

The moment a voice suddenly feels human.

The moment a recording opens up and the room disappears.

The moment you stop listening to the system and begin listening to the music.

That is what craftsmanship sounds like.

Availability: September 2026

Finish options: Black high gloss, white high gloss and walnut veneer

Price: EUR 27.000 for glossy and EUR 30.000 for walnut veneer

More information: on [Raidho.dk](https://raidho.dk) in July 2026

About Raidho Acoustics

Raidho Acoustics is a Danish high-end loudspeaker manufacturer dedicated to creating loudspeakers that bring listeners closer to the emotional truth of music. Hand-built in Denmark, Raidho loudspeakers combine proprietary in-house driver technology, advanced materials and Scandinavian craftsmanship to deliver exceptional speed, transparency and musical realism.
