Annual CO₂ Emissions - International Transportation

Historic annual CO₂ emissions due to international transportation from 1950 to 2022. Annual emissions from both international shipping and international aviation have increased rapidly since first recorded in the 1950s. International shipping emissions increased from 124.9 million tonnes in 1950 to 624.5 million tonnes in 2022. International aviation emissions increased from 3.51 million tonnes in 1950, peaked at 628.5 million tonnes in 2019, and decreased rapidly to 424.9 million tonnes in 2022.
