

Share of new cars sold that are electric

Data: [OurWorldinData.org](https://ourworldindata.org)

Electric Car Sales - Global

Global share of new electric cars sold from 2010 to 2022. This includes both full battery-electric and plug-in hybrid vehicles. Although more carbon is emitted during the manufacture of electric vehicles than those with internal combustion engines (ICE), they emit less carbon over their lifetime than their ICE counterparts. In 2010, electric cars made up less than 1% of global car sales, but their market share has grown quickly in many countries since then. By 2022, the percentage of new electric cars sold rose to 88% in Norway, 35% in The Netherlands, 29% in China, 23% in the UK, and 8% in the United States. In 2020 overall, approximately 1 in 7 (14%) of new cars sold globally was electric.
