

Methane Emissions, 2023

Data: [OurWorldinData.org](https://ourworldindata.org)

Methane Emissions by Country - 2023

Methane (CH₄) emissions from fossil fuels, industry, agriculture, and land-use change for 2023. Emissions are measured in billions of tonnes and expressed in “carbon dioxide equivalents” (CO₂eq) determined by multiplying the mass of the emissions of a specific GHG by its global warming potential factor for a 100-year period (GWP100).
