Digi Ready: From Screen to Practice

The partnership created seven short video tutorials, built around a learner-centered structure that came directly out of the needs assessment. Now the project is moving into its next stage. Across all three partner countries, Activity 4 workshops are starting. This is the point where the tutorials leave the screen and get tested with the people they were built for.
Each partner is shaping their workshops around their own learner groups. This will ultimately feed what they learn back into the tutorials afterward.
Here's where each partner stands right now.

ACROSS THE PARTNERSHIP
🇩🇪 **iberika (Germany)** Building on the teacher training workshops and the first sessions with vulnerable adult learners, the biggest lesson iberika learned was to simplify, then simplify again. Now, planning is underway for more training sessions, running through late September. The target group is learners from iberika's German integration courses, with a particular focus on the women's "Migrants in Everyday" (MiA) courses. The workshops will show learners how to use LLMs in a simple, practical way to break down language barriers. The second main focus is to help them navigate the Jobcenter portal. The final tutorials should be a really useful tool to help them use 2-step authentication to access their accounts and gain confidence navigating the bureaucratic site.

🇷🇴 **TEST (Romania):** In July 2026, TEST delivered a series of workshops with seniors that helped lay the groundwork for the video tutorials. As the tutorials were still under development at that stage, the sessions focused on understanding how senior learners approach the selected digital topics in practice. TEST observed participants' needs and learning behaviours, including which topics they found more challenging, how quickly they were able to progress, and where they needed additional guidance or clearer explanations. These insights helped shape the content, pace, and approach of the tutorials, ensuring they better reflect the needs of senior learners. Building on this work, further workshops with seniors are planned for September 2026, when the developed materials can be brought into the learning environment and additional feedback gathered.

🇵🇱 **Danmar (Poland):** In Poland, the preliminary workshops with seniors took place in July and August. During the workshops, seniors' learning habits, pace, and specific difficulties with digital topics were observed. On one hand, they were assessed by participants as very informative and useful but on the other hand, they directly guided the further work on the structure and content of the tutorials. The second round of workshops is scheduled for September 2026 to gather direct feedback in a practical learning setting.

WHAT WE'RE LOOKING FOR
As the workshops run, each partner is looking for the same thing to see where the tutorials hold up, and where learners need extra support. Real-life context examples will come directly out of these sessions. These will be used to improve the tutorials and produce the final versions.

LOOKING AHEAD

Once the workshops wrap, the partnership will bring the feedback together and refine the tutorials before they go live as free, ready-to-use resources on the project website and YouTube channel.
