

# Snippet Playground

Craft and preview content in real-time anywhere in the platform

## How does it work

The Snippet Snippet Playground lets you test and preview the content you're currently working on without entering a campaign editor or running a full workflow. It gives you a working draft of your content that's always within reach — accessible from anywhere in the platform via a keyboard shortcut

## What's New

The Snippet Widget, which hosts Snippet Playground, can now be opened from anywhere in Synerise using a keyboard shortcut

(Cmd + / or Ctrl + /).

This ensures that the Playground is always within reach, regardless of which module you are currently working in.

Widget with playground becomes a dedicated workspace for testing and previewing snippets alongside the content you're currently working on — without entering a campaign editor, modifying the full campaign template, or triggering the entire workflow.
